Contents

Preface	xiii
Acknowledgments	xvii
PART I. MANAGEMENT SCIENCE TOOLS AND TECHNIQUES	1
I. Definition of Management Science and Operations Research	1
II. The Relationship Between Management Science and Operations Research	2
III. The Management Scientist	3
IV. Management Problems	3
A. Techniques	4
B. Tools	4
V. Desirable Training for Management Scientists	5
References	8
Chapter 1. Management Science	9
Introduction	10
Management	10
Management Science	11
I. Evolution of Management Science	12
A. Evolution of Operations Research	14
B. Management Science as a Profession	15
C. Management Science vs Operations Research	15
II. Operations Research	16
A. Characteristics of Operations Research	16
B. Phases of the Operations Research Process	17
C. Solution Techniques	19

III. The Systems Function	20
IV. Management Science Organization	28
Review Questions	31
References	31
Recommendations for Further Reading	32
Chapter 2. Management Science and Modeling Techniques	35
Introduction	35
I. Problem Content and Form	36
A. Identify the Problem by Content	36
B. Identify the Problem by Form	36
C. Define Variables of the Problem	37
II. Model Development	38
III. Solution Category and Technique	39
A. Choose the Solution Category	39
B. Choose the Right Technique	39
IV. Techniques of Management Science	39
A. Optimization Techniques	40
B. Utilization of Computers	40
C. Heuristic Models	41
D. Simulation	41
V. The Systems Approach	42
Review Questions	43
Recommendations for Further Reading	44
Chapter 3. Modeling for Decision Making	46
Introduction	46
I. Factors Affecting Decisions	46
II. Decision Under Certainty	47
III. Decision Under Risk	48
A. Probability Theory and Bayes' Theorem	48
B. Decision Tree Analysis	51
C. Markov Chains	56
IV. Decision Under Uncertainty	61
A. The Criterion of Optimism (Maximax or Minimin)	61
B. The Criterion of Pessimism (Maximin or Minimax)	62
C. Maxim or Minim (Hurwicz Criterion)	62
D. The Criterion of Insufficient Reason (Laplace)	63
V. Decision Under Conflict	64
Review Questions	67
Recommendations for Further Reading	67

Chapter 4. Quantitative Methods for Management	69
Introduction	69
I. Quantitative Methods Requirements at Universities	70
II. Quantitative Requirements in Industry	72
III. The Gap Between Industry and Academia	75
IV. Summary	76
Review Questions	77
Recommendations for Further Reading	77
Appendix to Chapter 4: Quantitative Methods Required for Management Science	79
Chapter 5. Computing Tools	82
I. Computer Generations	82
II. Commercial and Business Computer Languages	84
A. COBOL	85
B. PL/I	86
III. Scientific Computer Languages	87
A. Introduction	87
B. Procedure-Oriented Languages	90
1. Languages for Numerical Scientific Problems	90
a. FORTRAN	90
b. ALGOL	92
c. PL/I	94
d. BASIC	95
e. APL	96
2. Languages for Formal Algebraic Manipulation	97
a. FORMAC	98
b. MATHLAB	98
C. Application-Oriented Languages	99
1. Simulation Languages	99
a. GPSS	101
b. SIMULA	103
c. Q-GERT	103
d. SIMSCRIPT	104
e. GASP	104
f. DYNAMO	105
g. CSMP	105
h. SLAM	106
i. Comparison of Simulation Languages	106
2. Languages for Certain Common Applications	108
a. MPS	108
b. MATLAN	110
c. PMS	110
3. Specialized Technical Application Languages	111
D. What Language Do I Learn?	111
IV. New Trends in Computer Technology	113
A. The Current Evolution in Hardware Design	113
B. Recent Trends	114

C. Minicomputers, Supercomputers, and Microcomputers	115
1. What Is a Minicomputer?	115
2. History of the Minicomputer	116
3. Minicomputer Applications	117
4. Superminis	118
5. Microprocessors and Microcomputers	119
6. The Future of Minicomputer Applications	120
Review Questions	120
References	120
Recommendations for Further Reading	121

Chapter 6. The Management Science Process:

A Systematic Approach	125
I. Approaching Solution Method Selection	125
II. Deterministic Problems	128
A. Determinate Problems: Model Revision	128
B. Analytical Solution Methods	129
1. Economic Studies	129
a. Compound Interest Problems	130
b. Depreciation Calculations	130
c. Deterministic Inventory Models	132
d. Break-Even Analysis	134
2. Deterministic Networks	134
3. Planning and Line Balancing	136
a. Gantt Charts	136
b. Indicator Method	137
c. Line Balancing	138
C. Optimization Problems: Model Revision	139
D. Optimization Solution Methods	140
1. Mathematical Programming	140
a. Linear Programming	141
b. Nonlinear Programming	144
2. Auxiliary Techniques	146
a. Exhaustive Enumeration	146
b. Network Analysis	146
c. Iterative Techniques	147
III. Stochastic Problems	147
A. Model Revision	148
B. Stochastic Solution Methods	150
1. Forecasting and Prediction	150
2. Stochastic Economic Analysis	151
3. Probabilistic Inventory Models	152
4. Program Evaluation and Review Technique (PERT)	153
5. Queuing Theory	154
6. Statistical Quality Control	155
7. Game Theory	156
8. Simulation	157
9. Stochastic Optimization	158
a. Stochastic Linear Programming	158
b. Stochastic Dynamic Programming	159

Review Questions	159
References	160
Recommendations for Further Reading	160

PART II. MANAGEMENT SCIENCE APPLICATIONS **163**

Reference	168
-----------	-----

Chapter 7. Major Management Science Applications **169**

I. Accounting and Finance	169
A. Linear and Integer Programming	170
B. Sensitivity Analysis	170
C. Zero-One Programming	171
D. PERT	172
E. Break-Even Analysis	172
F. Simulation	173
II. Banking	175
A. General Management	176
1. Asset/Liability Management	177
2. Mergers and Acquisitions Analysis	177
3. Demand Deposit Models	178
4. Management Information and Control Systems	178
5. Bank Management Games	178
B. Lending and Credit	179
1. Credit Analysis and Evaluation	179
2. International Lending and Foreign Exchange	180
3. Marketing	180
4. Customer Service	181
C. Bonds	181
D. Trusts	182
E. Operations	182
III. Personnel	183
A. Behavioral Modeling	184
B. Times Series Analysis	185
C. Linear and Dynamic Programming	186
IV. Production	186
A. Job Allocation	187
B. Plant Allocation	187
1. Raw Materials	188
2. Energy Resources	188
3. Capital	188
4. Labor	189
5. Transportation	190
6. Market	190
7. Secondary Factors	190
C. Plant Layout	191

D. Management Science Techniques in Production	191
1. Linear Programming	191
2. Dynamic Programming	192
3. Quality Control	193
4. Queuing Theory	195
5. Simulation	196
E. Measures of Production Operations	196
1. Process Analysis	196
2. Principle of Motion Economy	197
3. Sampling Theory	197
V. Inventory	197
A. Optimal Inventory Policy	198
B. Economic Lot Size Models	199
1. Maximum–Minimum System	202
2. ABC Inventory System	203
C. Application of Lot Size Models	204
VI. Purchasing	205
A. Purchasing Objectives	205
B. The Purchasing Function	205
1. Planning, Scheduling, and Policy Making	206
2. The Coordination Function	208
3. Implementing the Purchasing Function	209
4. The Control Function	209
C. Operational Tools and Procedures	210
1. Purchase Orders	210
2. Other Tools and Procedures	212
3. Application of Electronic Data Processing	213
VII. Marketing	215
A. Marketing Research	215
1. Consumer Behavior Research	216
2. Marketing Research Techniques	217
a. Data Collection	217
b. Basic Tools	219
c. Models	220
B. Pricing	221
1. Profit Maximization Model	222
2. Markup Pricing	222
3. Target Pricing	223
4. Contribution Pricing	223
C. Promotion and Advertising	224
D. Sales	225
VIII. Management Science Applications in	
International Systems	226
Review Questions	227
References	228
Recommendations for Further Reading	228
Chapter 8. Minor Management Science Applications	232
Introduction	232
I. Research and Development	232

II. Management Science in R&D	
Applications	235
A. Linear Programming	235
B. Nonlinear Programming	235
C. Dynamic Programming	236
D. PERT/CPM	237
E. Input-Output Analysis	237
F. Forecasting and Prediction	238
G. Expected Value	239
H. Utility Theory	240
1. Industrial Dynamics	242
J. Value Analysis/Systems Analysis	243
III. Other Developments	244
A. Real-Time Computer Scheduling System	244
B. Dynostat	245
C. A Model for Research Projects Selection	248
D. Delphi Procedure	250
E. CONTEST	251
F. TORQUE	254
G. Updated PERT	256
H. Analysis of Uncertainty Model	257
I. A Model for Technical Problem Solving	260
Review Questions	263
References	264
Recommendations for Further Reading	265

PART III. MANAGEMENT SCIENCE PROBLEMS AND PROMISES **267**

Chapter 9. Management Science Problems and Promises	269
Introduction	269
I. Problem Areas	270
A. Management Science Is a Young Profession	270
B. Approach May Not Be Realistic	270
C. Management Is Both Art and Science	271
D. The Human Element of Systems Design	271
II. Approaches to Solutions	272
A. Middle-Ground Approach	272
B. User Participation	272
C. People-Oriented Systems	273
D. Problem-Solving Approach	274
III. Future of Management Science	275
Recommendations for Further Reading	276

PART IV. APPENDIXES	279
Appendix 1. Computer Software for Accounting and Financial Analysis	281
Introduction	281
I. Service Bureaus	281
II. Time Sharing and Minicomputers	282
A. Time-Sharing Software	283
B. Minicomputers and Small Computers	285
1. IBM 5100	285
2. Litton 1241 and 1251	286
3. Burroughs L-2000	286
4. Nixdorf 820/110	286
5. IBM System/3	287
6. Online General Ledger and Financial Accounting System-II	287
7. Fixed Asset Accounting and Control System	287
8. Public Budgeting and Financial Reporting System	288
9. Mini-Plan Financial Modeling Program	288
10. Business Analysis/BASIC	288
11. Hewlett Packard 2000	290
III. Large System	292
References	295
Appendix 2. Abstracts of Recommended Articles on Management Science Tools and Techniques	297
Index	313
