PREFACE	xiii
---------------	------

1. INTRODUCTION TO THE BIOTECHNOLOGY LABORATORY 1

1.1 Overview	1
--------------------	---

1.2 Background	2
----------------------	---

Scope of Biotechnology • Working in the Biotechnology Laboratory • Laboratory Safety • Notes, Records, and Labels • Housekeeping • Preparation and Storage of Buffers • Preparation and Storage of Media • Care and Maintenance of Cultures • General Rules for Protein Handling • Storage of Nucleic Acids

1.3 Experimental Design and Procedures	20
--	----

Preparation of YPD and YPG Media • Streak Plating of Escherichia coli and Saccharomyces carlsbergensis • Microscopic Observation of Bacteria and Yeast • Inoculation of YPD and YPG with Saccharomyces carlsbergensis

Study Questions	29
-----------------------	----

Further Readings	29
------------------------	----

2. INTRODUCTION TO PROTEINS	31
2.1 Overview	31
2.2 Background	32
<i>Protein Function • Characterization of Proteins • Measurement of Biological Activity</i>	
2.3 Experimental Design and Procedures	41
<i>Time Course Study of α-Galactosidase Assay • Analysis of Culture Broth for α-Galactosidase Activity by the Standard α-Gal Enzyme Assay • Colorimetric Protein Assays • Biuret Protein Assay • Lowry Protein Assay • Bradford Protein Assay • Preparation and Inoculation of YP Broth for α-Galactosidase Production</i>	
Study Questions	56
Further Readings	56
 3. PROTEIN ISOLATION AND PREPARATION OF CRUDE EXTRACT	 59
3.1 Overview	59
3.2 Background	60
<i>Selection of Protein Source • Cell Disruption Techniques • Factors Affecting Activity in the Crude Extract</i>	
3.3 Experimental Design and Procedures	65
<i>α-Gal Assay of Yeast Culture Broth • α-Gal Assay of the Yeast Supernatant • Preparation of Yeast Protoplasts • Lysis of the Yeast Protoplast Cells • Collection of Supernatant and Determination of Total Protein • Stability Study of Yeast Supernatant</i>	
Study Questions	74
Further Readings	75
 4. BATCH PURIFICATION OF PROTEINS	 77
4.1 Overview	77
4.2 Background	78
<i>Bulk Precipitation Techniques • Batch Protein Capture • Gel Binding Capacity</i>	

4.3 Experimental Design and Procedures	85
<i>Determination of Binding pH • Capture of α-Galactosidase by Batch Ion Exchange</i>	
Study Questions	91
Further Readings	91
5. PROTEIN PURIFICATION BY COLUMN CHROMATOGRAPHY	93
5.1 Overview	93
5.2 Background	94
<i>Components of a Chromatography System • Chromatographic Resolution • Gel Filtration Chromatography • Ion Exchange Chromatography • Hydrophobic Interaction Chromatography • Affinity Chromatography • Chromatofocusing</i>	
5.3 Experimental Design and Procedures	108
<i>Desalting of Batch Purified α-Galactosidase • Preparation of the Ion Exchange Column • Chromatography of the Desalted Protein Sample • Analysis of IEX Purified α-Galactosidase with the Lowry Protein Assay</i>	
Study Questions	124
Further Readings	124
6. PROTEIN ANALYSIS AND VERIFICATION	125
6.1 Overview	125
6.2 Background	126
<i>Gel Electrophoresis • Chromatography • Amino Acid Analysis • Protein Sequencing</i>	
6.3 Experimental Design and Procedures	133
<i>Preparation of the Acrylamide Gel • Casting the Gel • Assembling the Electrophoretic Buffer Chamber • Sample Loading and Electrophoresis • Coomassie Blue R-250 Staining • Visualization by Assay with p-Nitrophenyl-α-D-galactoside • Visualization by Fluorescence</i>	

Study Questions	148
Further Readings	149
7. DESIGNING A CLONING SCHEME	151
7.1 Overview	151
7.2 Background	152
<i>Biology of DNA • Cloning Strategies • Identifying Clones with Probes • Probe Labelling Options</i>	
7.3 Experimental Design and Procedures	165
<i>Designing a Cloning Scheme • Designing a Probe—DNA from Protein • Preparation of Media for Yeast and E. coli • Streaking of Stored S. carlsbergensis and E. coli • Inoculation and Culturing of Yeast and E. coli</i>	
Study Questions	171
Further Readings	172
8. ISOLATION AND PREPARATION OF NUCLEIC ACIDS	173
8.1 Overview	173
8.2 Background	174
<i>Measuring Nucleic Acid Concentrations</i>	
8.3 Experimental Design and Procedures	179
<i>Yeast Genomic DNA Isolation • Plasmid DNA Isolation • Estimation of DNA Concentrations</i>	
Study Questions	186
Further Readings	186
9. CONSTRUCTING A GENE BANK	187
9.1 Overview	187

9.2 Background	188
<i>Cleaving DNA with Restriction Endonucleases • Agarose Gel Electrophoresis • Fragmenting Large Genomic DNA for Cloning • The Ligation Reaction</i>	
9.3 Experimental Design and Procedures	201
<i>Cleaving Vector DNA with Restriction Endonucleases • Partial Digestion of Genomic DNA • Analysis of Restriction Digests by Agarose Gel Electrophoresis • Ligation Reaction</i>	
Study Questions	213
Further Readings	213
10. INTRODUCING RECOMBINANT MOLECULES INTO <i>ESCHERICHIA COLI</i>	215
10.1 Overview	215
10.2 Background	216
<i>Transformation Methodologies • Selection of Transformed Organisms • Identification of Recombinant Vectors</i>	
10.3 Experimental Design and Procedures	226
<i>Preparation of Competent Cells • Transformation of <i>E. coli</i></i>	
Study Questions	229
Further Readings	230
11. SCREENING FOR CLONES	231
11.1 Overview	231
11.2 Background	232
<i>Parameters of Screening • The Screening Process</i>	
11.3 Experimental Design and Procedures	237
<i>Tailing of an Oligonucleotide • Synthesis of a Random Primed DNA Probe • Testing of Digoxigenin Labelled Probes • Colony Lifting and Probing of Transformed <i>E. coli</i> • Visualization of Colony Blots • Picking and Culturing of Transformed Colonies</i>	

Study Questions	248
Further Readings	249
12. CHARACTERIZING AND VERIFYING CLONED DNA	251
12.1 Overview	251
12.2 Background	252
<i>Restriction Endonuclease Mapping • Southern Blotting • DNA Sequencing • Verifying the Clone</i>	
12.3 Experimental Design and Procedures	266
<i>Restriction Mapping • Southern Blotting • Colorimetric Detection • Chemiluminescent Detection • Evaluating the Southern Blot • Sequencing of the MEL1 Gene • Gel Preparation and Pouring • Electrophoresing and Visualizing the Sequencing Reactions • Transformation of Yeast with Cloned DNA</i>	
Study Questions	286
Further Readings	286
13. APPLICATION OF DNA SEQUENCE AND CLONE DATA	289
13.1 Overview	289
13.2 Background	290
<i>Probe Design Using Molecular Analysis Software • Basic Sequence Analysis • Application of Sequence Data</i>	
13.3 Experimental Design and Procedures	301
<i>Computer Analysis of DNA Sequence • Amplification of DNA by the Polymerase Chain Reaction</i>	
Study Questions	307
Further Readings	307
14. THE VALUE OF INFORMATION	309
INDEX	315
