CONTENTS

Preface vii

CHAPTER 1 Introduction 1

Definition, 1
Theory of Constitutive Equations, 3
Simple Explanation, 4
Need for Experimental Data, 7
Comments, 8
Notation, 9

CHAPTER 2 Statements of Axioms of Continuum Mechanics 11

CHAPTER 3 Strain, Components of Strain, and Strain Tensor 15

One-Dimensional Idealization, 15
Three-Dimensional Case, 16
Invariants of Strain Tensor, 19
Decomposition of Strain Tensor, 22
Principal Strains, 25
States of Strain for Various Modes of Deformation, 31
Problems, 33

CHAPTER 4 Stress, Components of Stress, and Stress Tensor 35

Invariants of Stress Tensor, 36
Decomposition of Stress Tensor, 38
Principal Stresses, 44
States of Stress for Various Modes of Deformation, 51
Problem, 52

CHAPTER 5 Nonlinear Behavior, Importance of Testing, and Test Data 53

Nonlinear Behavior, 53
General Statement of Constitutive Laws, 56
Steps in Development of a Constitutive Law, 57
Determination of Constitutive Parameters, 57
Laboratory Test Devices, 58
Testing Program, 62
"Standard" Test Data, 70

CHAPTER 6 Elasticity: First- and Second-Order Models 83

Elastic Material, 83
Cauchy Elastic Models, 85
Green Elastic Models, 95
Higher-Order Models, 101
Determination of Material Parameters, 110
Incremental Stress–Strain Relationship: Cauchy Elastic Material, 111
Procedure for Evaluation of Parameters, 114
Incremental Stress–Strain Relationship: Green Elastic Material, 120
Applications, 128
Problems, 132

CHAPTER 7 Hypoelasticity 135

General Equations, 136
Models of Various Orders, 137
Implementation, 145
Applications, 166
Problems, 167

CHAPTER 8 Quasilinear Models 169

Basic Equation, 169
Variable Parameter or Variable Moduli Models, 172
Unloading and Hysteretic Behavior, 189
Applications, 197

CHAPTER 9 Plasticity: An Introduction 204

Review, 205
Yield Criteria, 206
Some Yield Criteria Used in Metal Plasticity, 213
Post-Yield Behavior: Plastic Stress–Strain Relations, 218
Generalized Plastic Stress–Strain Relations, 227

CHAPTER 10 Plasticity Models: I 240

Mohr–Coulomb Failure Criterion, 241
Drucker–Prager Model, 244
Derivation of Incremental Equations, 246
Determination of Parameters, 255
Applications, 268
Problem, 278

CHAPTER 11 Plasticity Models: II 282

Cam Clay Models Based on the Critical State Concept, 282
Cap Models, 295
Evaluation of Parameters, 298
Computer Procedure for Finding Parameters, 328
Applications, 329
Problems, 341

CHAPTER 12 Recent Developments 344

Isotropic and Anisotropic Materials and Hardening, 344
Kinematic Hardening Rules, 347
Nested Surfaces Models, 349
Bounding Surface Models, 364

Some Generalizations and Special Forms, 370
Hypoelasticity and Plasticity, 396
Brief Review of Other Recent Developments, 403

APPENDIX 1 Review of Indicial and Tensor Notation 415

APPENDIX 2 Cayley–Hamilton Theorem and Invariants of Tensors 426

APPENDIX 3 Least-Squares-Fit Program 437

APPENDIX 4 Computer Code for Parameters of Cap Model 442

Index 457
