List of Abbreviations	XVII

Part 1 Homogeneous Catalysis

1 1,1'-Bis(diphenylphosphino)ferrocene – Coordination Chemistry, Organic Syntheses, and Catalysis

K.-S. Gan and T. S. A. Hor

1.1	Introduction	3
1.2	Preparation and Complexation	3
1.3	Structural Properties	18
1.3.1	Modes of Coordination	18
1.3.2	Geometrical Distortions	33
1.4	Spectroscopic Characteristics	35
1.4.1	Techniques	35
1.4.1.1	³¹ P NMR Spectroscopy	35
1.4.1.2	¹ H NMR Spectroscopy	37
1.4.1.3	Mössbauer Spectroscopy	39
1.4.2	NMR Fluxionality	41
1.5	Catalysis	47
1.5.1	Cross Coupling	47
1.5.1.1	Organic Electrophile and Organometallic Coupling	47
1.5.1.2	Arylation and Vinylation of Alkenes	65
1.5.1.3	Carbonylation and Carbonylative Coupling	67
1.5.1.4	Nucleophilic Substitution	75
1.5.1.5	Polycondensation and Polymerization	78
1.5.2	Olefin Functionalization	80
1.5.2.1	Hydroformylation	80
1.5.2.2	Hydrogenation and Reduction	83

1.5.2.3	Hydroboration and Hydrosilylation	86
1.5.2.4	Isomerization	88
1.6	Cluster Complexes	89
1.7	Electrochemistry	93
1.8	Biomedical Applications	94
1.9	Summary	95
	References	96

2 Asymmetric Catalysis with Chiral Ferrocenylphosphine Ligands

T. Hayashi

2.1	Introduction	105
2.2	Preparation of Chiral Ferrocenylphosphines	106
2.3	Structure of Chiral Ferrocenylphosphines and their Transition-Metal Complexes	111
2.4	Catalytic Asymmetric Reactions with Chiral Ferrocenylphosphine Ligands	113
2.4.1	Cross-Coupling of Organometallics with Halides	113
2.4.2	Allylic Substitution Reactions via π -Allyl Complexes	119
2.4.3	Hydrogenation of Olefins and Ketones	128
2.4.4	Hydrosilylation of Olefins and Ketones	130
2.4.5	Aldol Reaction of α -Isocyanocarboxylates	132
2.4.6	Others	138
	References	139

3 Enantioselective Addition of Dialkylzinc to Aldehydes Catalyzed by Chiral Ferrocenyl Aminoalcohols

Y. Butsugan, S. Araki and M. Watanabe

3.1	Introduction	143
3.2	Chiral Ferrocenylzincs Bearing an Aminoethanol Auxiliary	144
3.2.1	Synthesis of the Catalysts	144
3.2.2	Addition of Diethylzinc to Benzaldehyde	145
3.3	<i>N</i> -(1-Ferrocenylalkyl)- <i>N</i> -alkylnorephedrine	148
3.3.1	Synthesis of the Catalysts	148
3.3.2	Addition of Diethylzinc to Aldehydes	149
3.4	Chiral Polymers Bearing <i>N</i> -Ferrocenylmethylephedrine	151
3.4.1	Synthesis of the Catalysts	151
3.4.2	Addition of Diethylzinc to Benzaldehyde	152
3.5	Chiral 1,2-Disubstituted Ferrocenyl Aminoalcohols	153
3.5.1	Synthesis of the Catalysts	153
3.5.2	Addition of Diethylzinc to Aldehydes	155

3.5.3	Addition of Dialkylzincs to <i>o</i> -Phthalaldehyde: A Facile Synthesis of Optically Active 3-Alkylphthalides	162
3.5.4	Enantio- and Diastereoselective Addition of Diethylzinc to Racemic α -Thio- and α -Selenoaldehydes	164
3.6	Summary	167
	References	168

Part 2 Organic Synthesis – Selected Aspects

4 Chiral Ferrocene Derivatives. An Introduction

G. Wagner and R. Herrmann

4.1	Central and Planar Chirality in Metallocenes	173
4.2	α -Ferrocenylalkyl Carbocations	175
4.2.1	Structure and Stability	175
4.2.2	Stereochemistry	176
4.3	Central Chiral Ferrocene Derivatives	178
4.3.1	Syntheses	178
4.3.1.1	By Resolution	178
4.3.1.2	By Asymmetric Synthesis	181
4.3.1.3	From the Chiral Pool	182
4.3.2	Alkenes	188
4.3.3	Amines	188
4.3.3.1	Reactions at Nitrogen	190
4.3.3.2	Reactions at Chiral Carbon	190
4.3.3.3	Stereoselective Metallation	193
4.4	Planar Chiral Ferrocene Derivatives	196
4.4.1	General Synthetic Methods	196
4.4.2	Phosphines	200
4.4.3	Sulfur and Selenium Compounds	201
4.4.4	Silicon and Tin Compounds	203
4.4.5	Other Derivatives	204
4.5	Applications of Chiral Ferrocene Derivatives	206
4.5.1	As Chiral Starting Materials	207
4.5.2	As Chiral Auxiliaries	208
4.5.2.1	Four Component Condensations	208
4.5.2.2	Other Applications	210
4.5.3	As Chiral Catalysts	212
4.5.3.1	C–C Coupling, Hydrogenation, and Hydrosilylation	212
4.5.3.2	Allylations and Aldol-Type Reactions	214
4.5.4	Other Catalytic Applications	214
	References	214

5 Ferrocene Compounds Containing Heteroelements*M. Herberhold*

5.1	Introduction	219
5.2	Synthesis of Ferrocene Derivatives Bearing Heteroelement Substituents	220
5.2.1	Borylation	220
5.2.2	Metallation	221
5.3	Selected Ferrocene Derivatives with Reactive Functional Substituents	225
5.3.1	Aminoferrocenes and Related Compounds	225
5.3.2	Hydroxyferrocenes and Related Compounds	229
5.3.3	Mercaptoferrocenes and Related Compounds	231
5.4	Homoleptic Ferrocenyl Derivatives of the Elements	236
5.5	Transition Metal Complexes with Ferrocenyl and 1,1'-Ferrocenediyl Ligands	240
5.6	Compounds with Ferrocenyl Chalcogenate and 1,1'-Ferrocenylene Dichalcogenate Groups	247
5.7	[3]Ferrocenophanes Containing Chalcogens	254
5.7.1	Compounds with One 1,3-Dichalcogena-[3]ferrocenophane Ring ..	255
5.7.2	Compounds with Two or Three 1,3-Dichalcogena- [3]ferrocenophane Rings	261
5.8	Oligo- and Polynuclear Ferrocenes with Chalcogen and Dichalcogen Bridges	264
5.9	Conclusions	267
	References	270

6 Macrocycles and Cryptands Containing the Ferrocene Unit*C. D. Hall*

6.1	Introduction	279
6.2	The Ferrocenophanes	281
6.3	Cryptands Containing the Ferrocene Unit	291
6.4	Macrocyclic Cryptand and Cavitand Derivatives of Ferrocene	300
6.4.1	Ferrocene Bound to Macrocycles	300
6.4.2	Ferrocene Bound to Cavitand Molecules	308
6.5	Summary	312
	References	313

7 Electrochemical and X-ray Structural Aspects of Transition Metal Complexes Containing Redox-Active Ferrocene Ligands

P. Zanello

7.1	Introduction	317
7.2	Ferrocene Complexes of Homometallic Metal Fragments	318
7.2.1	Group 4 Metal Complexes	318
7.2.1.1	Titanium Complexes	318
7.2.1.2	Zirconium Complexes	321
7.2.1.3	Hafnium Complexes	322
7.2.2	Group 5 Metal Complexes: Vanadium	322
7.2.3	Group 6 Metal Complexes	323
7.2.3.1	Chromium Complexes	323
7.2.3.2	Molybdenum Complexes	330
7.2.3.3	Tungsten Complexes	338
7.2.4	Group 7 Metal Complexes	341
7.2.4.1	Manganese Complexes	341
7.2.4.2	Rhenium Complexes	342
7.2.5	Group 8 Metal Complexes	347
7.2.5.1	Iron Complexes	347
7.2.5.2	Ruthenium Complexes	351
7.2.5.3	Osmium Complexes	358
7.2.6	Group 9 Metal Complexes	359
7.2.6.1	Cobalt Complexes	359
7.2.6.2	Rhodium Complexes	377
7.2.6.3	Iridium Complexes	383
7.2.7	Group 10 Metal Complexes	384
7.2.7.1	Nickel Complexes	384
7.2.7.2	Palladium Complexes	390
7.2.7.3	Platinum Complexes	401
7.2.8	Group 11 Metal Complexes	406
7.2.8.1	Copper Complexes	406
7.2.8.2	Silver Complexes	413
7.2.8.3	Gold Complexes	416
7.2.9	Group 12 Metal Complexes	417
7.2.9.1	Zinc Complexes	417
7.2.9.2	Cadmium Complexes	419
7.2.9.3	Mercury Complexes	419
7.3	Ferrocene Complexes of Heterometallic Fragments	421
7.3.1	Trinuclear Complexes	421
7.3.2	Pentanuclear Complexes	422
7.4	Conclusions	423
	References	424

Part 3 Materials Science**8 Ferrocene-Containing Charge-Transfer Complexes.
Conducting and Magnetic Materials***A. Togni*

8.1	Introduction	433
8.2	Chemical and Structural Requirements	435
8.3	Charge-Transfer Complexes of Polyalkylated Ferrocenes	437
8.3.1	Decamethylferrocene	440
8.3.1.1	With Organic Acceptors	440
8.3.1.2	With Inorganic Acceptors	449
8.3.2	Other Alkylferrocenes	454
8.3.3	Miscellaneous Ferrocenes	458
8.4	Biferrocenes	459
8.5	Charge-Transfer Complexes of Ferrocenes Containing Conjugated Heteroatom Substituents	460
8.6	Comparison with Other Organometallic Charge-Transfer Complexes	464
8.7	Conclusions and Perspectives	465
	References	466

9 Ferrocene-Containing Thermotropic Liquid Crystals*R. Deschenaux and J. W. Goodby*

9.1	Introduction	471
9.2	Monosubstituted Ferrocene Derivatives	477
9.3	Symmetrically Disubstituted Ferrocene Derivatives	477
9.3.1	1,1'-Disubstituted Ferrocene Derivatives	477
9.3.2	1,3-Disubstituted Ferrocene Derivatives	484
9.3.3	1,2-Disubstituted Ferrocene Derivatives	488
9.4	Unsymmetrically 1,1'-Disubstituted Ferrocene Derivatives	489
9.5	Ferrocene-Containing Liquid Crystal Polymers	492
9.6	Concluding Remarks	494
	References	494

10 Synthesis and Characterization of Ferrocene-Containing Polymers*K. E. Gonsalves and X. Chen*

10.1	Introduction	497
10.2	Addition Polymers	499
10.3	Condensation Polymers	504
10.4	Ring-Opening Polymerization	514
10.5	Derivatization of Preformed Organic Polymers	520
10.6	Electropolymerization	523
10.7	Summary	527
	References	527
Index		531
