

Sven Danø

Nonlinear and Dynamic Programming

An Introduction

Springer-Verlag

Wien New York

Contents

I. Linear and Nonlinear Programming	1
II. Elements of the Mathematical Theory of Nonlinear Programming	5
A. Constrained Optimization	5
B. Kuhn-Tucker Optimization	12
III. Linearization of Nonlinear Programming Problems	22
A. Linear Approximations and Linear Programming	22
B. Partitioning of Variables	23
C. Separable Programming	28
IV. Quadratic Programming	33
A. Linear and Quadratic Programming	33
B. The Kuhn-Tucker Conditions	36
C. Combinatorial Solution	38
D. Wolfe's Method	43
E. The Simplex Method for Quadratic Programming	47
F. Beale's Method	50
G. Computer Solution	54
H. Some Industrial Applications	55
V. Dynamic Programming and Multistage Optimization ...	60
VI. Applications of Dynamic Programming	74
A. The Shortest Path through a Network	74
B. Production Planning	78
C. Inventory Problems	93
D. Investment Planning	103
E. Allocation of Salesmen	115
F. Cargo Loading and the Knapsack Problem	117
VII. Several Decision and State Variables	120
VIII. Infinite-Stage Problems	125
IX. Dynamic Programming under Risk	135
A. Risk and Multistage Optimization	135
B. Dynamic Programming and Markov Processes	139
X. Appendix: The Recursion Procedure in Dynamic Programming	150
A. Stage Optimization	150
B. Backward Recursion for Given Initial State	151
C. Forward Recursion for Given Initial State	152
D. Forward Recursion for Given Final State	154
E. Backward Recursion for Given Final State	155
F. Given Initial and Final States	155
Answers to Exercises	156
References	160
Index	163
