Inv.-Nr. F 529

Contents

Introduction	1
1 Studies of aggregates	3
1.1 Early roads	3
1.2 Research before the 1914-1918 war	3
1.3 Creation of the Road Board	4
1.4 The first British Standard Specifications	5
1.5 The Ministry of Transport	5
1.6 Research on aggregates for concrete	6
1.7 Dr. Bernard Knight	6
1.8 The formation of the Road Research Laboratory	6
1.9 Early work of the Road Research Laboratory	7
1.9.1 First projects	7
1.9.2 Variability of aggregates	8
1.9.3 “State of the art” in the late 1940s	9
1.10 Post-war projects	10
1.10.1 Work of the (Transport and) Road Research Laboratory	10
1.10.2 Other research	13
2 Sources and production of road aggregate	14
2.1 Sources of road aggregate in Great Britain	14
2.1.1 Metallurgical slags	14
2.1.2 Sands and gravels	17
2.1.3 Igneous rocks	19
2.1.4 Metamorphic rocks	20
2.1.5 Sedimentary rocks	21
2.1.6 Polish-resistant aggregates	23
2.2 Production	28
2.2.1 Crushing	29
2.2.2 Screening	31
2.2.3 Distribution	32
2.3 Waste and low-grade aggregates	34
2.3.1 General	34
2.3.2 Colliery shale	35
2.3.3 Pulverised fuel ash	36
2.3.4 Incinerated domestic refuse	37
2.3.5 China clay sand	38
2.3.6 Spent oil shale	38
2.3.7 Miscellaneous wastes	39

3	General requirements of roadmaking aggregates	41
3.1	Practice in Great Britain	41
3.1.1	Water-bound and unbound materials	41
3.1.2	Concrete road construction	45
3.1.3	Bituminous road construction	56
3.1.4	Resin-bound surfacings	65
3.1.5	Setts and pavers	65
3.2	International recommendations for aggregates testing	67
4	Tests for roadstones and aggregates	73
4.1	Test procedures	73
4.1.1	General	73
4.1.2	Sampling	76
4.1.3	Tests for strength	80
4.1.4	Density and water absorption	87
4.1.5	Shape and texture	89
4.1.6	Polishing resistance	93
4.1.7	Compactability tests	94
4.1.8	Sieve analysis	95
4.1.9	Tests for soundness	98
4.1.10	Chemical tests	100
4.1.11	Other tests	101
4.1.12	Classification	103
4.2	Correlation between tests	107
4.2.1	Petrology and other characteristics	107
4.2.2	Correlation between mechanical tests	113
5	Special requirements of aggregates for skid-resistance	125
5.1	Bituminous surfacings	125
5.1.1	Development of the polished-stone value test	125
5.1.2	Aggregates and polishing	129
5.1.3	The effect on skid-resistance of factors other than PSV	130
5.1.4	Mixtures of aggregates	131
5.1.5	Relationship between polished-stone value and skidding	131
5.1.6	Variation in skid-resistance at a road site	137
5.1.7	Turning and braking	137
5.2	Aggregates in concrete	137
5.2.1	Accelerated wear machine	137
5.2.2	The polished-mortar value test	140
5.2.3	Black deposits	142
5.3	Aggregates in other road materials	142
5.3.1	Resin surfacings	142
5.3.2	Other special polish resistant surfacings	145
5.4	Mechanism of polishing of aggregates	147
5.5	Road experiments	148
5.5.1	General	148
5.5.2	Results from small-scale road experiments	149
5.5.3	Results from full-scale road experiments	149

6	Road surface characteristics	154
6.1	Resistance to skidding	154
6.1.1	General	154
6.1.2	Road surface projection shape and friction	157
6.2	Measurement of resistance to skidding	159
6.2.1	General background to studies in Great Britain	159
6.2.2	Small braking-force trailer	161
6.2.3	SCRIM	162
6.2.4	Portable skid-resistance tester	166
6.2.5	The measurement of macro-texture	166
6.3	Skidding accidents: causes and costs	169
6.3.1	The causes of road accidents	169
6.3.2	The magnitude and cost of road accidents	169
6.3.3	Relation between skid-resistance and accident rate in Great Britain	170
6.3.4	Some accident/skidding studies made overseas	171
6.3.5	The saving of accidents and their cost by improvements in skid-resistance in Great Britain	174
6.4	Traffic noise	174
6.5	Reflecting properties of roads	175
6.5.1	General	175
6.5.2	Road surface reflection characteristics	175
7	Applications of research and experience	178
7.1	Resistance to skidding	178
7.1.1	Skid resistance standards for roads	178
7.1.2	Polish-resistance standards for aggregates	185
7.2	Overseas specifications for skid-resistance & aggregates	188
7.2.1	Belgium	188
7.2.2	Czechoslovakia	188
7.2.3	Finland	188
7.2.4	France	189
7.2.5	Italy	189
7.2.6	Japan	190
7.2.7	The Netherlands	190
7.2.8	Poland	190
7.2.9	Spain	191
7.2.10	Sweden	191
7.2.11	Switzerland	191
7.3	Specifications for aggregates	192
7.3.1	National and International Standards	192
7.3.2	A chronology of British Standards referring to aggregates	193
7.3.3	A history of British Standard BS 812	194
7.4	Current British Standards for aggregates and roadstone	198
7.5	ASTM Standards for aggregates	199

8	Author's thoughts	200
8.1	Sources and production of road aggregates	200
	8.1.1 General	200
	8.1.2 Super-quarries	201
	8.1.3 Mining	201
8.2	General requirements of roadmaking aggregates	202
8.3	Tests for roadstone and aggregates	202
	8.3.1 General	202
	8.3.2 Grading of aggregates	203
	8.3.3 Razor-blade shape	203
	8.3.4 Classification	204
8.4	Special requirements of aggregates for skid-resistance	204
8.5	Road surface characteristics	205
	8.5.1 The effect of tyre compound and tread pattern on the significance of skid-testing with SCRIM and HSTM	205
	8.5.2 Skidding on dry roads	208
	8.5.3 Further thoughts about texture requirements	209
	8.5.4 The effect of present-day trafficking on the PSV/SFC relationship	209
8.6	Applications of research and experience	210
	8.6.1 Specification limits	210
	8.6.2 Skid-resistance maintenance policies	211
	8.6.3 Further saving of accidents and their cost by improvements in skid-resistance	213
	8.6.4 Tougher standards for tougher chippings	213
	Acknowledgements	215
