Contents

<i>Preface</i>	xi
<i>Acknowledgements</i>	xiii
1. Introduction	1
1.1 Distributed Computing	2
1.1.1 Distributed System Definition	3
1.2 The UNIX Operating System	4
1.2.1 The File System	4
1.2.2 The UNIX Process Model	6
1.3 The Ada Programming Language	6
1.4 The PULSE Distributed Operating System	8
1.4.1 Methods of Distribution	9
1.4.2 Ada and Distributed Systems	10
1.5 Distributed Operating Systems	11
1.6 Summary	12
2. Communication between Ada Programs	13
2.1 The Operating System's Model of Concurrency	13
2.2 The PULSE Inter-Program Communication Facility	15
2.2.1 Design Aims	15
2.2.2 Design Issues	16
2.2.2.1 Process Naming	16
2.2.2.2 Process Synchronisation	17
2.2.2.3 The Representation of a Message	22
2.2.2.4 Communication Failures	22
2.2.2.5 Software Generated Interrupts	23
2.2.3 Example Use of the IPC	24
2.3 Evaluation of the PULSE IPC	26
2.4 Summary	27
3. The PULSE Distributed File System	29
3.1 Design Aims and Constraints	29
3.2 The User's View	31

3.3 File System Architecture	32
3.3.1 File Replication	32
3.3.2 File System Object Naming	33
3.3.2.1 Master Volumes	34
3.3.2.2 Duplicate Volumes	34
3.3.2.3 I-number Allocation	35
3.3.2.4 Directories	35
3.3.3 File Location	36
3.3.4 Duplicate File Synchronisation	37
3.3.5 File Protection	38
3.4 User Control	38
3.4.1 File Selection Control	39
3.4.2 File Replication Control	40
3.5 The File Server as a Distributed Name Server	40
3.6 File Server Communication Protocols	41
3.7 Summary	42
4. The PULSE User Interface	43
4.1 Introduction	43
4.2 UNIX System Facilities	44
4.3 PULSE System Facilities	46
4.3.1 PULSE Kernel	46
4.3.2 File Server Operations	48
4.4 The Command Language	50
4.4.1 User Interaction	50
4.5 The UNIX and PULSE Command Interface	51
4.5.1 Initial Behaviour	53
4.5.2 UNIX Expression of Shell Commands	53
4.5.3 PULSE Expression of Shell Commands	57
4.6 Discussion of PULSE Shell Implementation	61
4.6.1 Tasking	61
4.6.2 Arguments	64
4.6.3 Performance	64
4.7 Summary	64
5. User Programming	67
5.1 System Packages	67
5.2 An Example Package	69
5.3 A Simple Example Tool	72
5.4 A Further Example Tool	72
5.5 An Example of a Distributed Program	79
5.6 Summary	81

6. The PULSE Kernel Implementation	83
6.1 Introduction	83
6.2 LSI-11/23	85
6.3 Physical Device Drivers	85
6.3.1 The Cambridge Ring Interface	85
6.4 Support for Ada Tasking and Exception Handling	87
6.4.1 Program Expansion	90
6.4.2 Overlays	90
6.4.3 Rendezvous Support	90
6.4.4 Task Scheduling	92
6.4.5 Exception Handling	92
6.4.6 Limitations	93
6.5 Inter-Program Communication (IPC)	93
6.5.1 Mediums	93
6.5.2 Messages and their Structure	94
6.5.3 Reply and Transfer Medium	95
6.5.4 Error Handling	95
6.5.5 The Network Server	96
6.6 Program Loading	97
6.7 Logical Device Interface	99
6.8 Current Status	99
7. The PULSE Distributed File System Implementation	101
7.1 Introduction	101
7.2 The Public Interface	102
7.2.1 File Server Request Mediums	102
7.2.2 Open File Mediums	102
7.2.3 Reply Mediums	102
7.2.4 Resource Deallocation	103
7.2.5 Program Execution	103
7.2.6 Distribution and Replication	104
7.3 Implementation Constraints	105
7.3.1 Ada Language Constraints	105
7.3.2 Restrictions on Use of Tasking	105
7.3.2.1 Task Storage Overhead	105
7.3.3 Dynamic Storage Allocation	106
7.3.4 Overlays	106
7.3.5 Task Synchronisation Overhead	107
7.4 File Server Structure	107
7.4.1 Use of Tasking	107
7.5 The Library High	109
7.5.1 Open Files	110

7.6 The Library Low	111
7.6.1 The Disk Buffer Cache	113
7.6.1.1 Buffer Representation	113
7.6.1.2 Buffer Allocation	114
7.6.1.3 Physical I/O	114
7.6.1.4 Limits to Parallelism	114
7.6.1.5 Rendezvous Optimisation	115
7.6.2 Disk Volumes	115
7.6.2.1 Disk Volume Layout	115
7.6.2.2 Disk Volume Mounting	116
7.6.3 The Active I-node Level	116
7.6.3.1 Package Inode's User Interface	116
7.6.3.2 Duplicate File Synchronisation	117
7.6.3.3 I-node Table Manager Task	117
7.6.3.4 Remote Active I-nodes	118
7.6.3.5 Logical File I/O	119
7.6.3.6 The Private Interface	120
7.6.3.7 Communication Protocol	121
7.6.4 Directories	123
7.7 Statistics	124
7.8 Summary	125
 8. Performance Evaluation	127
8.1 Performance Evaluation of the PULSE Kernel	127
8.1.1 Rendezvous Times	127
8.1.2 Overlay Times	128
8.1.3 Allocating and Deallocating Mediums	128
8.1.4 Basic Communication Overhead	129
8.1.5 Data Transaction Performance Figures	130
8.2 Distributed File System	134
8.2.1 File server operations	135
8.2.2 General Measurements	136
8.2.3 Interpretation of Measurements	138
8.2.4 Nassi-Habermann Optimisation	140
8.3 Summary	141
 9. Retrospective	143
9.1 General Architecture	143
9.2 Using Ada	145
9.3 Distributed Programming	148
9.4 Closing Remarks	148
 Appendix A: The Ada Representation of the PULSE IPC	151
Appendix B: PULSE Programmer's Manual Entries	161

Appendix C: A Review of Ada Tasking	193
C.1 The Tasking Model	193
C.1.1 Communication and Synchronisation	194
C.1.2 Task Types and Task Access Variables	197
C.1.3 Entry Family	198
C.1.4 Task Abortion	198
C.1.5 Task Attributes	199
C.2 Evaluation of the Rendezvous	199
C.2.1 Requirements for a Synchronisation Mechanism	199
C.2.1.1 Modularity	199
C.2.1.2 Expressive Power and Ease of Use	200
C.2.2 Bloom's Methodology Applied to Ada	201
C.2.2.1 Modularity Requirements	201
C.2.2.2 Expressive Power	203
C.2.2.3 Ease of Use	210
C.3 Conclusions	227
