

Probabilistic Theory of Ship Dynamics

W. G. Price

Lecturer in Mechanical Engineering
University College London.

R. E. D. Bishop

Kennedy Professor of Mechanical Engineering
in the University of London and
Fellow of University College.

LONDON
CHAPMAN AND HALL

Technische Hochschule Darmstadt
Fachbereich Mechanik
Bibliothek

Inv.-Nr. BM 186/74

Contents

	Preface	page	v
1	Introduction		1
	PART I Basic Statistics		5
2	Sets and subsets		7
2.1	Sample space		10
2.2	Probability		11
2.2.1	<i>Conditional probability and independence of events</i>		13
2.2.2	<i>Bayes' formula</i>		16
3	Random variable		18
3.1	Probability distribution function		19
3.1.1	<i>Probability density function</i>		19
3.2	Two random variables		21
3.2.1	<i>Joint probability distribution function</i>		22
3.2.2	<i>Joint probability density function</i>		23
3.2.3	<i>Independence of two random variables</i>		25
3.3	Transformation of probability density function		26
4	Characteristics of probability density functions		32
4.1	Expected value		32
4.1.1	<i>Mean square value</i>		33
4.1.2	<i>Variance and standard deviation</i>		33
4.1.3	<i>Two random variables</i>		35
4.2	Moment generating function		37
4.3	The Gaussian or normal probability density function		38

viii Contents

4.3.1	<i>Standardised Gaussian probability density function</i>	40
4.3.2	<i>Moments of standardised random variable</i>	43
4.3.3	<i>The central limit theorem</i>	45
4.4	Gaussian probability density function for two random variables	47
4.4.1	<i>Moment generating function of Gaussian random variables</i>	50
4.5	Rayleigh probability density function	53
4.5.1	<i>Moments of the Chi distribution</i>	55
4.6	Binomial and Poisson distributions	56
4.6.1	<i>The time dependent Poisson distribution</i>	58
4.6.2	<i>The exponential and Weibull distributions</i>	60
5	Random processes	62
5.1	Probability functions in relation to a random process	63
5.2	Practical measures of a random process	65
5.2.1	<i>Mean and mean square values</i>	65
5.2.2	<i>Auto-correlation and auto-covariance</i>	65
5.2.3	<i>Cross-correlation and cross-covariance</i>	66
5.2.4	<i>Position dependence</i>	66
5.3	Special types of random process	67
5.3.1	<i>Stationary process</i>	67
5.3.2	<i>Homogeneous process</i>	69
5.3.3	<i>Ergodic process</i>	70
5.4	The correlation functions of an ergodic process	72
6	Frequency analysis	77
6.1	Fourier series	77
6.1.1	<i>Spectral density</i>	81
6.2	The Fourier integral	84
6.2.1	<i>An important special case</i>	87
6.3	Application of the Fourier transform to random processes	89
6.3.1	<i>The mean square spectral density</i>	91
6.4	Cross-correlation and cross-spectral density functions	93
	PART II Waves	97
7	Travelling waves	99
7.1	General mathematical theory	99
7.1.1	<i>Simple harmonic progressive waves</i>	101

7.1.2	<i>Pressure variation</i>	105
7.1.3	<i>Dispersion and wave groups</i>	106
7.2	The probabilistic approach	108
7.2.1	<i>Superposition of waves</i>	113
7.2.2	<i>Representation of an irregular seaway</i>	115
8	Generalised frequency analysis	117
8.1	Fourier series in two dimensions	117
8.1.1	<i>Fourier series in three dimensions</i>	119
8.2	Fourier integral	120
8.3	Application of the Fourier integral to random processes	122
8.3.1	<i>Some properties of the auto-correlation function</i>	125
9	Wave spectral density functions	128
9.1	Instantaneous energy spectra	129
9.2	Local energy spectra	131
9.2.1	<i>Wave slope spectra</i>	135
9.3	Simplified three-dimensional energy spectra	136
9.4	Wave formation	138
9.4.1	<i>Growth of wind-generated waves</i>	139
9.4.2	<i>Practical representation of crested seas</i>	141
9.4.3	<i>Classification of wind generated waves</i>	142
9.4.4	<i>Compilation of wave data</i>	147
9.5	Theories of wave spectra	157
9.6	Some properties of local wave spectra	163
9.6.1	<i>Zero crossings</i>	164
9.6.2	<i>Peak or maximum probability density function</i>	167
9.6.3	<i>Duration of excursion probability density function</i>	171
9.7	Special probability density functions	174
9.7.1	<i>Narrow band spectra</i>	176
9.7.2	<i>Statistical values of 1/nth highest observations</i>	179
9.7.3	<i>Expected maximum wave amplitude</i>	181
9.7.4	<i>Mean wave period and wave-length</i>	183
9.7.5	<i>Wide band spectra</i>	185
	PART III Theory of Seakeeping	191
10	Random vibration of linear systems	193
10.1	Impulsive inputs	195
10.1.1	<i>Excitation of a system with one degree of freedom</i>	197

x Contents

10.1.2	<i>Step input and step response</i>	198
10.1.3	<i>Properties of impulse response functions</i>	199
10.1.4	<i>The Hilbert transform or Kramers-Kronig relationship</i>	202
10.2	General linear system with single input and single output	204
10.2.1	<i>Input-output relations for random processes</i>	204
10.2.2	<i>Input-output relations for derivatives</i>	211
10.2.3	<i>Gaussian random processes</i>	212
10.3	Multiple input and output	212
10.4	Dependence on position and time	215
10.4.1	<i>Input-output relationship for homogeneous, stationary random processes</i>	217
11	Deterministic theory of ship motions	220
11.1	Frames of reference	222
11.2	Equations of motion	224
11.2.1	<i>Heave and pitch motions</i>	228
11.2.2	<i>Vertical shear forces and bending moments</i>	230
11.2.3	<i>Antisymmetric motions</i>	233
11.3	The ship motion receptances	234
11.4	The two dimensional sectional parameter	240
11.4.1	<i>Added mass</i>	242
11.4.2	<i>The damping coefficient</i>	248
11.5	Wave receptance	248
11.6	Transient wave testing	250
12	Motion in a seaway	256
12.1	Heave and pitch in a long crested sea	256
12.2	Heave and pitch in a general seaway	260
12.2.1	<i>Relative motion</i>	262
12.3	Practical heaving and pitching processes	264
12.3.1	<i>Head seas</i>	266
12.3.2	<i>Following seas</i>	269
12.3.3	<i>Non-dimensional form of statistical properties</i>	275
13	Excessive motions and design factors	278
13.1	Narrow band motion process	278
13.2	Absolute and relative motion	279
13.3	Wetness	286

13.3.1	<i>Expected number of deck wettings</i>	287
13.4	Slamming	288
13.4.1	<i>Probability of slamming</i>	290
13.4.2	<i>Expected number of slams</i>	291
14	Nonlinear motions	294
14.1	The perturbation method	296
14.2	The functional method	301
14.3	Equivalent linearisation method	303
