TABLE OF CONTENTS

PART I. INTRODUCTION ......................................................... 1

CHAPTER 1. BASIC MEMBRANE STRUCTURE AND ELECTRICAL PROPERTIES .......... 5
   A. Some Simple Concepts About Membrane Structure ......................... 5
   B. The General Nature of Membrane Electrical Properties ................. 7

CHAPTER 2. PASSIVE ELECTRICAL PROPERTIES OF AXONS ...................... 12
   A. Non-Myelinated Fibres ................................................. 12
   B. Myelinated Fibres ...................................................... 18

CHAPTER 3. OVERVIEW OF THE GROSS PROPERTIES OF EXCITABLE CELLS .......... 27
   A. The Membrane Theory of Excitation and Propagation ..................... 27
   B. Strength-Duration Relation, Accommodation ............................. 30
   C. Refractory States and Firing Frequency ................................ 34
   D. Axonal Characteristics and Action Potential Propagation .............. 35

CHAPTER 4. THE HODGKIN-HUXLEY AXON ..................................... 42
   A. Voltage Clamping ....................................................... 42
   B. Ionic Current Flow as Revealed by the Voltage Clamp .................... 44
   C. Empirical Formulae for the Conductances ................................ 49
   D. Reconstruction of the Action Potential ................................ 50

CHAPTER 5. CURRENT LEVELS OF KNOWLEDGE ABOUT THE EARLY AND LATE CURRENT FLOW PATHWAYS .......... 51
   A. The Action of Tetrodotoxin (TTX) ..................................... 51
   B. The Action of Tetraethylammonium Ion (TEA) .............................. 54
   C. Ionic Strength Effects on the Kinetic Parameters of Excitation ........ 54
   D. The Effect of Calcium on the Membrane ................................ 56
   E. The Effects of pH Changes ............................................. 57
   F. Cation Selective Properties of the Membrane at Rest and During Excitation ........... 57
   G. Kinetic Behaviour in the K Channel .................................. 59
   H. High Potassium Effects on the K Channel Current-Voltage Curve ........ 59
   I. The Nature of the Leakage Pathway ................................... 60

PART II. CLASSICAL ELECTRODIFFUSION THEORIES OF MEMBRANE ELECTRICAL PROPERTIES .......... 63

CHAPTER 6. CONSERVATION AND FIELD EQUATIONS ............................ 65
CHAPTER 12. RELATIONSHIP BETWEEN THE MICROSCOPIC AND MACROSCOPIC FORMULATIONS OF ELECTRODIFFUSION THEORY
   A. Conservation Equations ........................................... 161
   B. Relation to Electrodiffusion .................................... 164

CHAPTER 13. THE MICROSCOPIC MODEL IN A STEADY STATE: NO CONCENTRATION GRADIENTS
   A. Spatial Gradients in a Steady State ............................ 168
   B. Solutions of the Kinetic Equations For a DC Field ........... 169
   C. Analytic Behaviour of the Current Density as a Function of Electric Field Strength ......................... 171
   D. Computed Behaviour of $\mathcal{T}(E)$ and $G_c(E)$ ............ 174
   E. Estimation of Some Membrane Related Quantities ............. 193

CHAPTER 14. THE STEADY STATE MICROSCOPIC MODEL WITH SOLUTION ASYMMETRY
   A. Solution of the Kinetic Equations ................................ 199
   B. A Generalized Goldman Equation .................................. 201
   C. Computed Properties of the Model ............................... 204
   D. One Way Fluxes and the Independence Principle ............... 209

CHAPTER 15. STEADY STATE AND DYNAMIC PROPERTIES OF THE MACROSCOPIC MODEL ................. 217

REFERENCES ........................................................................... 229

APPENDIX 1 ............................................................................. 239

APPENDIX 2 ............................................................................. 240
