

DISS. ETH NO. 19094

Texture Mapping and True Orthophoto Generation of 3D Objects

A dissertation submitted to

ETH ZURICH

for the degree of
Doctor of Sciences

presented by

Thomas Hanusch

Dipl.-Ing. Geodäsie, Technische Universität Dresden

born

5th of April, 1978

citizen of Germany

accepted on the recommendation of

Prof. Dr. Armin Grün, examiner
Zurich, Switzerland

Prof. Dr.-Ing. Dieter Fritsch, co-examiner
Stuttgart, Germany

Prof. Dr. Lorenz Hurni, co-examiner
Zurich, Switzerland

2010

Fachbereich 13
(TU Darmstadt)

62559110

Contents

1	Introduction	0
1.1	Characteristics of the Proposed Approaches	1
1.2	Thesis Organization	1
2	Texture Mapping and True Orthophoto Existing Approaches	4
2.1	Texture Mapping	5
2.1.1	Visibility Analysis	6
2.1.2	Triangle to Image Assignments (TtIA)	8
2.1.3	Colour Correction	10
2.1.3.1	Vignetting Correction	10
2.1.3.2	Global Grey-Value Adjustment	13
2.1.3.3	Blending between Texture Sources	13
2.1.3.4	Detection and Removal of Shadows and Overexposed Regions	14
2.1.3.5	Shadow Detection using Visibility Analysis	16
2.1.3.6	Shadow Detection using Colour Information, Evaluation of Existing Approaches	17
2.1.3.7	Elimination of Shadow Regions	24
2.2	Orthophoto & True Orthophoto Generation	28
2.2.1	Traditional Ortho Image	28
2.2.1.1	Rectification Process, Classical Ortho Image	29
2.2.2	True Ortho-Image	31
2.2.2.1	True Ortho Rectification	32
3	Texture Mapping, Proposed Approach	36
3.1	Approach, Workflow	36
3.2	Geometric Part	38
3.2.1	Visibility Analysis	38
3.2.1.1	Reduction of Processing Time	42
3.2.1.2	Memory Consumption	44
3.2.2	Triangle to Image Assignment (TtIA)	44
3.3	Radiometric Corrections	48
3.3.1	Color Space	48
3.3.2	Vignetting Correction	49
3.3.2.1	Automatic Detection of Common Points	49
3.3.2.2	Vignetting Correction, Approach	54

3.3.3	Global Brightness Correction	55
3.3.3.1	Global Brightness Correction for Images without Vignetting	55
3.3.3.2	Improvement of Point Position According to the Image Content	56
3.3.3.3	Global Brightness Correction, Vignetted Images	57
3.3.4	Local Brightness Correction	57
3.3.5	Detection of Overexposed Regions	61
3.3.6	Proposed Approach for the Shadow Detection using Color Information	61
3.3.7	Proposed Approach for the Elimination of Shadow Regions	64
3.3.7.1	Umbra Removal, Proposed Approach	64
3.3.7.2	Penumbra Removal, Proposed Approach	67
4	True Orthophoto Generation, Proposed Approach	70
4.1	True Orthophoto Generation, Proposed Approach	70
4.1.1	Definition of the Ortho Image Plane	70
4.1.2	Calculation of the Grey Values	70
4.1.2.1	Transformation of the Dataset into the Ortho-Image Coordinate System	71
4.1.2.2	Cut Out of the Triangles behind the Ortho-Image Plane	71
4.1.2.3	Project every Triangle into the Ortho-Image Plane	71
4.2	True Orthophoto Generation, Process Optimization	72
4.3	True Ortho-Photo Generation, Alternative Approach	72
5	Performance Evaluation	74
5.1	Visibility Analysis	74
5.1.1	Khmer Head Dataset	74
5.1.2	Herakles Dataset	76
5.1.3	Artificial Building Model	80
5.1.4	Building Model ETH Hönggerberg	81
5.1.5	Stone Dataset	82
5.2	Triangle to Image Assignment	84
5.2.1	Khmer Head Dataset	84
5.2.2	Herakles Dataset	84
5.2.3	Stone Dataset	87
5.3	Colour Correction Algorithms	88
5.3.1	Vignetting Correction	88
5.3.1.1	Dinosaur Dataset	88
5.3.1.2	Herakles Dataset	91
5.3.2	Global Colour Correction	94
5.3.2.1	Tiananmen Square Dataset	94
5.3.2.2	Sankt Galler Globe Dataset	95
5.3.2.3	Dinosaur Dataset	95
5.3.3	Shadow Detection	99
5.3.3.1	Aerial Image	99
5.3.3.2	Dinosaur Hard-Ground	99
5.3.4	Shadow Removal	102

5.3.4.1	Aerial Image	102
5.4	Result of the Texture Mapping	104
5.4.1	Khmer Head Dataset	104
5.5	True Orthophoto Algorithm	105
5.6	Processing Times	106
6	Conclusions and Outlook	108
6.1	Summary of Achievements	108
6.1.1	Geometrical Part	108
6.1.1.1	Visibility analysis	108
6.1.1.2	Triangle to Image Assignment	109
6.1.2	Radiometric Part	109
6.1.2.1	Vignetting Correction	109
6.1.2.2	Global Color Correction	109
6.1.2.3	Local Color Correction	109
6.1.2.4	Shadow Detection	110
6.1.2.5	Shadow Removal	110
6.2	Conclusion	110
6.3	Further Investigations and Improvements	111
A	Software Description	118
A.1	Introduction	118
A.2	Visibility Analysis	118
A.2.1	General Notes	118
A.2.2	Input Data	118
A.2.3	Output Data	121
A.2.4	Included Algorithms	121
A.2.4.1	Usage	122
A.3	Triangle to Image Assignment (TtIA)	122
A.3.1	General Notes	122
A.3.2	Input Data	122
A.3.3	Output Data	122
A.4	Color Correction Modules	124
A.4.1	General Notes	124
A.4.2	Input Data	124
A.4.3	Output Data	125
A.4.4	Available Algorithms	125
