# CONTENTS

<i>Preface</i> . . . . .	xiii
<i>Acknowledgments</i> . . . . .	xvii
<i>Notation</i> . . . . .	xix
<i>List of Fundamental Matrix Properties</i> . . . . .	xxi
<i>List of Iterative Methods</i> . . . . .	xxiii
<b>1. Introduction</b> . . . . .	1
1.1. The Model Problem . . . . .	2
Supplementary Discussion . . . . .	6
Exercises . . . . .	6
<b>2. Matrix Preliminaries</b> . . . . .	7
2.1. Review of Matrix Theory . . . . .	7
2.2. Hermitian Matrices and Positive Definite Matrices . . . . .	18
2.3. Vector Norms and Matrix Norms . . . . .	25
2.4. Convergence of Sequences of Vectors and Matrices . . . . .	34
2.5. Irreducibility and Weak Diagonal Dominance . . . . .	36
2.6. Property A . . . . .	41
2.7. $L$ -Matrices and Related Matrices . . . . .	42
2.8. Illustrations . . . . .	48
Supplementary Discussion . . . . .	53
Exercises . . . . .	55

<b>3. Linear Stationary Iterative Methods . . . . .</b>	<b>63</b>
3.1. Introduction . . . . .	63
3.2. Consistency, Reciprocal Consistency, and Complete Consistency . . . . .	65
3.3. Basic Linear Stationary Iterative Methods . . . . .	70
3.4. Generation of Completely Consistent Methods . . . . .	75
3.5. General Convergence Theorems . . . . .	77
3.6. Alternative Convergence Conditions . . . . .	80
3.7. Rates of Convergence . . . . .	84
3.8. The Jordan Condition Number of a $2 \times 2$ Matrix . . . . .	89
Supplementary Discussion . . . . .	94
Exercises . . . . .	95
<b>4. Convergence of the Basic Iterative Methods . . . . .</b>	<b>106</b>
4.1. General Convergence Theorems . . . . .	106
4.2. Irreducible Matrices with Weak Diagonal Dominance . . . . .	107
4.3. Positive Definite Matrices . . . . .	108
4.4. The SOR Method with Varying Relaxation Factors . . . . .	118
4.5. $L$ -Matrices and Related Matrices . . . . .	120
4.6. Rates of Convergence of the J and GS Methods for the Model Problem	127
Supplementary Discussion . . . . .	132
Exercises . . . . .	133
<b>5. Eigenvalues of the SOR Method for Consistently Ordered Matrices . . . . .</b>	<b>140</b>
5.1. Introduction . . . . .	140
5.2. Block Tri-Diagonal Matrices . . . . .	141
5.3. Consistently Ordered Matrices and Ordering Vectors . . . . .	144
5.4. Property A . . . . .	148
5.5. Nonmigratory Permutations . . . . .	153
5.6. Consistently Ordered Matrices Arising from Difference Equations . . . . .	157
5.7. A Computer Program for Testing for Property A and Consistent Ordering	159
5.8. Other Developments of the SOR Theory . . . . .	162
Supplementary Discussion . . . . .	163
Exercises . . . . .	163
<b>6. Determination of the Optimum Relaxation Factor . . . . .</b>	<b>169</b>
6.1. Virtual Spectral Radius . . . . .	170
6.2. Analysis of the Case Where All Eigenvalues of $B$ Are Real . . . . .	171

6.3. Rates of Convergence: Comparison with the Gauss–Seidel Method . . . . .	188
6.4. Analysis of the Case Where Some Eigenvalues of $B$ Are Complex . . . . .	191
6.5. Practical Determination of $\omega_b$ : General Considerations . . . . .	200
6.6. Iterative Methods of Choosing $\omega_b$ . . . . .	209
6.7. An Upper Bound for $\bar{\mu}$ . . . . .	211
6.8. A Priori Determination of $\bar{\mu}$ : Exact Methods . . . . .	216
6.9. A Priori Determination of $\bar{\mu}$ : Approximate Values . . . . .	222
6.10. Numerical Results . . . . .	224
Supplementary Discussion . . . . .	227
Exercises . . . . .	228

## 7. Norms of the SOR Method . . . . . 233

7.1. The Jordan Canonical Form of $\mathcal{L}_\omega$ . . . . .	234
7.2. Basic Eigenvalue Relation . . . . .	239
7.3. Determination of $\ \mathcal{L}_\omega\ _{D^{1/2}}$ . . . . .	245
7.4. Determination of $\ \mathcal{L}_{\omega_b}^m\ _{D^{1/2}}$ . . . . .	248
7.5. Determination of $\ \mathcal{L}_\omega\ _{A^{1/2}}$ . . . . .	255
7.6. Determination of $\ \mathcal{L}_{\omega_b}^m\ _{A^{1/2}}$ . . . . .	258
7.7. Comparison of $\ \mathcal{L}_{\omega_b}^m\ _{D^{1/2}}$ and $\ \mathcal{L}_{\omega_b}^m\ _{A^{1/2}}$ . . . . .	264
Supplementary Discussion . . . . .	265
Exercises . . . . .	266

## 8. The Modified SOR Method: Fixed Parameters . . . . . 271

8.1. Introduction . . . . .	271
8.2. Eigenvalues of $\mathcal{L}_{\omega,\omega'}$ . . . . .	273
8.3. Convergence and Spectral Radius . . . . .	277
8.4. Determination of $\ \mathcal{L}_{\omega,\omega'}\ _{D^{1/2}}$ . . . . .	283
8.5. Determination of $\ \mathcal{L}_{\omega,\omega'}\ _{A^{1/2}}$ . . . . .	288
Supplementary Discussion . . . . .	291
Exercises . . . . .	291

## 9. Nonstationary Linear Iterative Methods . . . . . 295

9.1. Consistency, Convergence, and Rates of Convergence . . . . .	295
9.2. Periodic Nonstationary Methods . . . . .	300
9.3. Chebyshev Polynomials . . . . .	301
Supplementary Discussion . . . . .	304
Exercises . . . . .	304

<b>10. The Modified SOR Method: Variable Parameters . . . . .</b>	<b>306</b>
10.1. Convergence of the MSOR Method . . . . .	307
10.2. Optimum Choice of Relaxation Factors . . . . .	307
10.3. Alternative Optimum Parameter Sets . . . . .	311
10.4. Norms of the MSOR Method: Sheldon's Method . . . . .	315
10.5. The Modified Sheldon Method . . . . .	319
10.6. Cyclic Chebyshev Semi-Iterative Method . . . . .	321
10.7. Comparison of Norms . . . . .	327
Supplementary Discussion . . . . .	340
Exercises . . . . .	341
<b>11. Semi-Iterative Methods . . . . .</b>	<b>344</b>
11.1. General Considerations . . . . .	345
11.2. The Case Where $G$ Has Real Eigenvalues . . . . .	347
11.3. J, JOR, and RF Semi-Iterative Methods . . . . .	355
11.4. Richardson's Method . . . . .	361
11.5. Cyclic Chebyshev Semi-Iterative Method . . . . .	365
11.6. GS Semi-Iterative Methods . . . . .	367
11.7. SOR Semi-Iterative Methods . . . . .	374
11.8. MSOR Semi-Iterative Methods . . . . .	376
11.9. Comparison of Norms . . . . .	383
Supplementary Discussion . . . . .	385
Exercises . . . . .	386
<b>12. Extensions of the SOR Theory: Stieltjes Matrices . . . . .</b>	<b>391</b>
12.1. The Need for Some Restrictions on $A$ . . . . .	391
12.2. Stieltjes Matrices . . . . .	395
Supplementary Discussion . . . . .	401
Exercises . . . . .	401
<b>13. Generalized Consistently Ordered Matrices . . . . .</b>	<b>404</b>
13.1. Introduction . . . . .	404
13.2. $CO(q, r)$ -Matrices, Property $A_{q,r}$ , and Ordering Vectors . . . . .	405
13.3. Determination of the Optimum Relaxation Factor . . . . .	413
13.4. Generalized Consistently Ordered Matrices . . . . .	418
13.5. Relation between $GCO(q, r)$ -Matrices and $CO(q, r)$ -Matrices . . . . .	419

13.6.	Computational Procedures: Canonical Forms . . . . .	422
13.7.	Relation to Other Work . . . . .	428
	Supplementary Discussion . . . . .	429
	Exercises . . . . .	430
<b>14.</b>	<b>Group Iterative Methods . . . . .</b>	<b>434</b>
14.1.	Construction of Group Iterative Methods . . . . .	435
14.2.	Solution of a Linear System with a Tri-Diagonal Matrix . . . . .	441
14.3.	Convergence Analysis . . . . .	445
14.4.	Applications . . . . .	452
14.5.	Comparison of Point and Group Iterative Methods . . . . .	454
	Supplementary Discussion . . . . .	456
	Exercises . . . . .	457
<b>15.</b>	<b>Symmetric SOR Method and Related Methods . . . . .</b>	<b>461</b>
15.1.	Introduction . . . . .	461
15.2.	Convergence Analysis . . . . .	463
15.3.	Choice of Relaxation Factor . . . . .	464
15.4.	SSOR Semi-Iterative Methods: The Discrete Dirichlet Problem . . . . .	471
15.5.	Group SSOR Methods . . . . .	474
15.6.	Unsymmetric SOR Method . . . . .	476
15.7.	Symmetric and Unsymmetric MSOR Methods . . . . .	478
	Supplementary Discussion . . . . .	480
	Exercises . . . . .	481
<b>16.</b>	<b>Second-Degree Methods . . . . .</b>	<b>486</b>
	Supplementary Discussion . . . . .	493
	Exercises . . . . .	493
<b>17.</b>	<b>Alternating Direction Implicit Methods . . . . .</b>	<b>495</b>
17.1.	Introduction: The Peaceman-Rachford Method . . . . .	495
17.2.	The Stationary Case: Consistency and Convergence . . . . .	498
17.3.	The Stationary Case: Choice of Parameters . . . . .	503
17.4.	The Commutative Case . . . . .	514
17.5.	Optimum Parameters . . . . .	518

17.6. Good Parameters . . . . .	525
17.7. The Helmholtz Equation in a Rectangle . . . . .	531
17.8. Monotonicity . . . . .	534
17.9. Necessary and Sufficient Conditions for the Commutative Case . . . . .	535
17.10. The Noncommutative Case . . . . .	545
Supplementary Discussion . . . . .	547
Exercises . . . . .	548
<b>18. Selection of Iterative Method . . . . .</b>	<b>553</b>
<b>Bibliography . . . . .</b>	<b>556</b>
<i>Index</i> . . . . .	565
