

**Man's Impact on the
Global Environment**

Assessment and
Recommendations
for Action

Report of the Study of Critical
Environmental Problems
(SCEP)

Sponsored by the Massachusetts
Institute of Technology

FACHBEREICH BIOLOGIE (10)

Contents

Preface	xi
Participants	xvii
Part I Summary of Findings and Recommendations	
1.	
Introduction	3
1.1	
The Problems Studied	4
1.2	
The Focus on Global Problems	5
1.3	
The Quality of Available Data and Projections	6
2.	
Climatic Effects of Man's Activities	9
2.1	
Introduction	10
2.2	
Carbon Dioxide from Fossil Fuels	11
2.3	
Particles in the Atmosphere	12
2.4	
The Role of Clouds	14
2.5	
Cirrus Clouds from Jet Aircraft	15
2.6	
Supersonic Transports (SSTs) in the Stratosphere	15
2.7	
Atmospheric Oxygen: Nonproblem	18
2.8	
Surface Changes and the Climate	18
2.9	
Thermal Pollution	19
3.	
Ecological Effects of Man's Activities	21
3.1	
General Effects	22
3.2	
DDT and Related Persistent Pesticides	25
3.3	
Mercury and Other Toxic Heavy Metals	26

vi	Contents	
3.4	Oil in the Ocean	26
3.5	Nutrients in Coastal Waters	27
3.6	Wastes from Nuclear Energy	28
4.		
	Implications of Change and Remedial Action	31
4.1	Introduction	32
4.2	Establishing New Priorities	32
4.3	Affixing Responsibilities	33
4.4	Accepting the Costs	33
4.5	Assessing the Available Means for Action	34
4.6	Stimulating Effective Actions	34
4.7	Developing New Professionals	35
4.8	Cooperating with Other Nations	35
	Part II Reports of SCEP Work Groups	
I.		
	Work Group on Climatic Effects	39
1.1	Introduction	40
1.1.1	Our Frame of Reference	40
1.1.2	The Atmosphere	41
1.2	Man-Made Atmospheric Contaminants	46
1.2.1	Carbon Dioxide and Other Trace Gases That May Affect Climate	46
1.2.2	Particles and Turbidity	56
1.2.3	Heat Released	63
1.2.4	Jet Aircraft Contributions to the High Atmosphere	64

vii Contents

1.2.5	
Oxygen: Nonproblem	74
1.2.6	
Radioactive Nuclides	75
1.3	
Changes of the Earth's Surface	76
1.4	
Theory of Climate and Possibilities of Climatic Change	77
1.4.1	
Mathematical Models of the Atmosphere	78
1.4.2	
Effects of Changing CO ₂	82
1.4.3	
Effects of Changing Particles and Turbidity	88
1.4.4	
Atmospheric Clouds	91
1.4.5	
Effects of Heat Released	96
1.4.6	
Effects of Changing the Earth's Surface	96
1.4.7	
Effects of Jet Aircraft	99
2.	
Work Group on Ecological Effects	113
2.1	
Introduction	114
2.2	
The Problem	114
2.2.1	
Present Scale of Human Activity	114
2.2.2	
Growth in Human Demands	117
2.2.3	
Global Ecological Effects	119
2.2.4	
Environmental Services	123
2.2.5	
Evaluation of Current Status	125
2.3	
Case Studies	126
2.3.1	
DDT in the Marine Environment	126
2.3.2	
Mercury	137
2.3.3	
Ocean Pollution by Petroleum Hydrocarbons	139
2.3.4	
Phosphorus	144

viii Contents

2.3.5	
Wastes from Nuclear Energy	149
2.4	
Information Needs	150
2.4.1	
Introduction	150
2.4.2	
Information on Distribution	150
2.4.3	
Information on Effects	154
2.4.4	
Information on Sources	156
2.5	
General Considerations of Ecology and Life-Style	157
2.5.1	
Population Growth	157
2.5.2	
Ecological Growth	158
2.5.3	
Pesticide Addiction	158
2.5.4	
Communication and Education	159
2.6	
Appendix: Carbon Cycle in the Biosphere	160
3.	
Work Group on Monitoring	167
3.1	
The Concept of Monitoring	168
3.2	
Monitoring Techniques and Systems	169
3.2.1	
Economic and Statistical Monitoring	169
3.2.2	
Physical and Chemical Monitoring	171
3.2.3	
Biological Monitoring	172
3.2.4	
Modern Technology and Monitoring	174
3.3	
The Precursor of Monitoring: An Ocean Base-Line Sampling Program	176
3.3.1	
The Oceans	177
3.3.2	
Organisms	178
3.3.3	
Rivers	179
3.3.4	
Glacial, Rain, and Sediment Samples	182

3.4		
Monitoring Critical Global Problems		184
3.4.1		
Monitoring Chlorinated Hydrocarbons and Toxic Heavy Metals		186
3.4.2		
Atmospheric Composition and Possible Climatic Changes		191
3.4.3		
Monitoring Oil		212
3.4.4		
Monitoring Surface Changes		214
3.4.5		
Monitoring Nutrients in the World's Waters		216
3.5		
Considerations for Implementation		217
4.		
Work Group on Implications of Change		223
4.1		
Background and Perspective		224
4.2		
Global Effects and Key Pollutants		227
4.3		
Implications of Change Within the United States		227
4.3.1		
A Roster of Sources by Types		229
4.3.2		
Types of Remedial Change at the Sources and Their Implications: An Overview		229
4.3.3		
Illustrative Applications		237
4.4		
International Action and Reaction		246
4.4.1		
Joint International Action		246
4.4.2		
National Action and Reaction: Pollution and the Developing Countries		249
4.5		
The Function of Scientific, Technical, and Professional Education		254
5.		
Work Group on Industrial Products and Pollutants		257
5.1		
Introduction		258
5.2		
Production and Use of Pesticides		258

x Contents

5.3		
Production, Use, and Emission of Selected Toxic Metals	259	
5.4		
Emissions from Industrial Operations	263	
5.5		
Industrial Wastes of Petroleum Origin	266	
5.6		
Phosphorus Cycling in the Environment	270	
6.		
Work Group on Domestic and Agricultural Wastes	275	
6.1		
Introduction	276	
6.2		
Sources of Materials Released to the Atmosphere	276	
6.3		
Sources of Pollutants Released to Estuaries and Oceans	279	
6.4		
Agricultural Wastes and Practices	280	
7.		
Work Group on Energy Products	287	
7.1		
Introduction	288	
7.2		
Energy Consumption	288	
7.3		
Emissions from Energy Consumption	293	
7.4		
Geographic Distribution of Emissions	301	
7.5		
Potential of Pollution Control	302	
7.6		
Appendix: Calculation of CO ₂ Emissions	305	
Units and Conversion Factors	307	
Index	309
