Magnetic Flux Structures in Superconductors

With 99 Figures

PHYSIKALISCHE BIBLIOTHEK
FACHBEREICH 5
TECHNISCHE HOCHSCHULE
DARMSTADT

II/380

Springer-Verlag Berlin Heidelberg New York 1979

Contents

1. Introduction 1

2. Magnetic Properties of Type-I Superconductors 4

   2.1 Meissner Effect, Penetration Depth, and Coherence Length 4
   2.2 Intermediate State and Wall Energy 13
   2.3 Landau Domain Theory 16
   2.4 Domain Patterns 21

3. Ginzburg-Landau Theory 33

   3.1 Free Energy and the Ginzburg-Landau Equations 34
   3.2 The Two Characteristic Lengths $\xi(T)$, $\lambda(T)$ and the Wall-Energy Parameter 37
   3.3 Critical Current in a Thin Film or Wire 41
   3.4 Quantization of the Fluxoid 44
   3.5 Nucleation of Superconductivity in Bulk Samples 46
   3.6 Nucleation of Superconductivity at Surfaces 48
   3.7 Abrikosov Vortex State Near H_{c2} 50

4. Magnetic Properties of Type-II Superconductors 58

   4.1 Mixed State 58
   4.2 London Model 61
      4.2.1 Isolated Vortex Line 61
      4.2.2 Lower Critical Field H_{c1} 64
      4.2.3 Interaction Between Vortex Lines 65
      4.2.4 Magnetization Near H_{c1} 67
   4.3 Clem Model 69
   4.4 Theory of the Static Vortex Structure 72
   4.5 Flux-Line Lattices 75
      4.5.1 Correlation Between the Vortex Lattice and the Crystal Lattice 75
      4.5.2 Defects in the Vortex Lattice 78

4.6 Surface Effects 82
4.6.1 Energy Barrier Near a Surface 83
4.6.2 Vortex Nucleation at the Surface 86
4.7 Attractive Vortex Interaction 87
4.7.1 Experiments 88
4.7.2 Theory 92

5. Thin Films 94

6. Experimental Techniques 100

6.1 Bitter Method 100
6.2 Magneto Optics 102
6.3 Micro Field Probes 110
6.4 Neutron Diffraction 110
6.5 Magnetization 114
6.6 Miscellaneous 118

7. Lorentz Force and Flux Motion 121

7.1 Motion of Magnetic Flux Structures 121
7.2 Lorentz Force 122
7.3 Flux Flow Resistance 124
7.4 Flux Penetration into a Superconductor 130
7.5 Hall Effect 134
7.6 Ettinghausen and Peltier Effect 136
7.7 Josephson Relation 138
7.8 Instabilities 141
7.9 Force-Free Configurations 143

8. Special Experiments 144

8.1 Magneto Optics 144
8.2 Nuclear Magnetic Resonance 145
8.3 Neutron Diffraction 145
8.4 Sharvin Point Contact 147
8.5 Magnetic Coupling 148
8.6 Micro Field Probes 152
8.7 Simulation Experiments 154

9. Thermal Force and Flux Motion 155

9.1 Thermal Force 155

9.2 Nernst and Seebeck Effect 156
9.3 Transport Entropy 160

10. Time-Dependent Theories 165

10.1 Phenomenological Theories 165
10.2 Time-Dependent Ginzburg-Landau Theory 170
Flux-Flow Resistivity 174
Hall Effect 177
Transport Entropy 177

11. Flux Pinning 179

11.1 Critical State 179
11.2 Summation of Pinning Forces 184
11.3 Fundamental Pinning Interactions 186
11.3.1 Core Interaction 186
11.3.2 Magnetic Interaction 187
11.3.3 Elastic Interaction 189
11.3.4 Ginzburg-Landau Free Energy 189
11.4 Some Model Experiments 191

12. Flux Creep and Flux Jumps 195

13. Electrical Noise Power 200

13.1 Autocorrelation Function and Power Spectrum 200
13.2 Influence of the Geometry of the Contacts 205
13.3 Experiments 209

14. Current-Induced Resistive State 211

14.1 Wire Geometry 211
14.2 Thin Film Geometry 215
14.2.1 Dynamic Model: Nucleation of Flux-Tube Trains 215
14.2.2 Gibbs Free-Energy Barrier 220
14.2.3 Constricted Geometry 221
14.3 Microbridges 228
14.4 Thermal Effects 231

List of Symbols 234
Bibliography 241
References 242
