

# **Electric Field Applications**

in Chromatography,  
Industrial and Chemical Processes

Edited by Takao Tsuda

Weinheim · New York · Basel · Cambridge · Tokyo

# Table of Contents

1	<b>Introduction and Summary</b>	1
	Takao Tsuda	
	<b>Part 1 Electrochromatography</b>	11
2	<b>Electrochromatography in Analytical Chemistry</b>	13
	Takao Tsuda, Shinya Kitagawa	
2.1	Theory of Band Broadening	13
2.2	Apparent Mean Linear Flow Velocity and Elution Time	14
2.3	Processes in Band Broadening	14
2.4	Electrochromatography Zones	17
2.5	Profiles of Pressurized Flow, Electroosmotic Flow, and Zones of Ionic Solutes	18
2.5.1	Flow Profiles of Pressurized Flow	18
2.5.2	Flow Profiles of Electroosmosis in an Open Tube	19
2.5.3	Flow Profiles for Charged Molecules	27
2.6	Pressurized Flow-Driven Electrochromatography on Microcolumns	29
2.6.1	Instrumentation	29
2.6.2	Features and Operational Factors	31
2.6.3	Chromatographic Behavior in Pressurized Flow-Driven Electrochromatography	32
2.6.4	Chromatographic Variation due to the Application of High Voltage	35
2.6.5	Relation between Elution Time Ratio and pH	35
2.6.6	Variation of Electrophoretic and Electroosmotic Flow Velocities with pH	37
2.6.7	Dependence of Electrophoretic and Electroosmotic Velocities on the Composition of Eluents Containing Methanol	39
2.6.8	Ion-Exchange Chromatography in an Electric Field	40
2.6.9	Voltage-Programmed Electrochromatography	42
2.7	References	45
3	<b>Electroosmosis and Electrochromatography</b>	47
	Takao Tsuda	
3.1	Electroosmosis	47
3.1.1	Surface Charge of Silica Gel and Packing Support	47
3.1.2	Electrical Potential in the Vicinity of a Solid Surface	48
3.1.3	Origin of Electroosmotic Flow	50

3.1.4	Thickness of the Double-Layer	51
3.1.5	Charge Density on Silica Gel Surfaces	53
3.1.6	Chemical Modification of the Inner Surface by Adsorption in Open-Tubular Capillary Columns	54
3.1.7	Effect of pH on Electroosmosis	55
3.1.8	Electroosmotic Mobility in Open-Tubular Capillary Columns	56
3.1.9	Electroosmotic Flow Velocity in Packed Columns	56
3.2	Electroosmotically Driven Chromatography and Electrochromatography	59
3.2.1	Electroosmotically Driven Electrochromatography	59
3.2.2	Electroosmotically Driven Chromatography	61
3.2.2.1	Open-Tubular Capillary Columns	61
3.2.2.2	Packed Microcapillary (Drawn Packed Capillary) Columns	66
3.2.2.3	Slurry-Packed Capillary Columns	70
3.2.3	Advantages of Electroosmotic Flow for Liquid Chromatography	72
3.3	References	73
4	<b>Electrochromatography with Radial Applied Voltage: Ion Separation by Electrochemical Approach</b>	75
	Tsutomu Nagaoka	
4.1	Introduction	75
4.2	Experimental Details	76
4.2.1	Design of the Electrode Column	76
4.2.2	Preparation of Stationary Phases	77
4.3	Redox Separation of Electroactive Metals on the Conductive Stationary Phase	79
4.4	Direct Electrostatic Interactions for Potential-Dependent Separation of Electroinactive Species	80
4.4.1	Pretreated Carbon for the Separation of Metal Ions	80
4.4.2	Stationary Phase Coated with Crown Ether for the Separation of Alkali Metal Ions	80
4.4.3	Electrosorption for the Separation of Neutral Organic Compounds	82
4.5	Indirect Electrostatic Interactions for Potential-Dependent Separation of Electroinactive Species	83
4.5.1	Conducting Polymers for Separation of Anions	83
4.6	Summary	88
4.7	References	88
5	<b>Electrochromatography in Biomolecular Analysis</b>	91
	Daniel H. Shain	
5.1	Introduction	91
5.2	Significance	91
5.3	Characteristics of Biomolecules	92
5.4	Development of Electrochromatographic Techniques	94
5.5	Gel Electrophoresis	96
5.6	Electrochromatography in Preparative Columns	97
5.6.1	Sequential Electrochromatography	97
5.6.2	Electrochromatography with Modern Adaptions to Liquid Chromatography	99
5.6.3	Focusing in Columns	104

8	<b>Electrophoretic Forming of Ceramics</b>	153
	Takao Tsuda and Hideki Ishida	
8.1	Electrophoretic Behavior of Inorganic Particles in Aqueous Solution	154
8.2	Selection of Organic Solvents for Electrodeposition of Inorganic Particles Dispersed in Organic Solution	155
8.3	Electrophoretic and Electroosmotic Forming	156
8.3.1	History	156
8.3.2	Industrial Applications of Electrophoretic and Electroosmotic Forming	158
8.4	Control of Particle Diameter for High Productivity and a Low Water Content in Electrical Forming	161
8.5	Zeta-Potential of Raw Materials	164
8.6	Electrodes	164
8.7	Electrophoretic Forming Continuous Ceramic Sheet	166
8.8	References	169
9	<b>Control of Viscosity by Electric Fields: Novel Materials for Electro-Rheological Fluids and their Applications</b>	171
	Yuichi Ishino, Tasuku Saito, Norio Goshima, and Kazuya Takano	
9.1	Introduction	171
9.2	Fundamental Characteristics of ERF	171
9.3	Development of the Dispersed Phase	175
9.3.1	Chelate Resin	175
9.3.2	Porous Silica Microspheres	178
9.3.3	Carbonaceous Particulate Phases	179
9.4	Applications	181
9.5	Conclusion	184
9.6	References	184
10	<b>Application of Electric Fields to Solvent Extraction</b>	185
	Manabu Yamaguchi	
10.1	Introduction	185
10.2	Theory	186
10.2.1	Hybrid Flow and Enhanced Mass Transfer Around Drops	187
10.2.2	Electrostatic Liquid Dispersion	192
10.2.3	Electrostatic Drop – Drop Coalescence	194
10.3	Electrostatic Liquid-Liquid Extraction	195
10.3.1	Electrostatic Spray Column	195
10.3.2	Electrically Assisted Mixer – Settler Extractor	196
10.3.3	Electrostatic Pseudo-Liquid Membrane Extractor	200
10.4	Nomenclature	201
10.5	References	203

11	<b>Applications of the Electric Fields to the Resolution of Water-in-Oil Emulsions</b>	205
	Manabu Yamaguchi	
11.1	Introduction	205
11.2	Fundamental Relationships	206
11.2.1	Dielectrophoresis	206
11.2.2	Computational Simulation of Chain Formation	208
11.2.3	Observation of Chain Formation	209
11.2.4	Electrophoresis	211
11.2.5	Effect of Electric Fields on Resolution of Water-in-Oil Dispersions	212
11.3	Electrostatic Resolution of Emulsion in the Oil Industry	213
11.3.1	Dehydration	213
11.3.2	Desalting	215
11.4	Electrostatic Phase Separation of Rich Water-in-Oil Emulsions in Liquid Membrane Separation	219
11.4.1	Membrane Recovery in Liquid Membrane Separation	219
11.5	Conclusions	226
11.6	Nomenclature	226
11.7	References	227
<b>Part 3</b>	<b>Applications of Electric Fields for Concentration, Immunoassay and Molecular Orientation</b>	229
12	<b>Dynamic Electroconcentration Processes in Analytical Chemistry</b>	231
	Takao Tsuda	
12.1	Collection of Metal Ions from Acid Solutions by Hydrodynamic Recycling	231
12.2	Electrodialysis for Desalting or Concentration of Metal Ions by Multiple Ion-Exchange Chambers	233
12.3	Counter-Current Electroconcentration	236
12.3.1	Principles	236
12.3.2	Apparatus	239
12.3.3	Examples	240
12.3.4	Operational Stability	241
12.4	Electroosmosis and Electrophoretic Mobility for Counter-Current Electroconcentration	241
12.5	Electroosmosis for Sample Transfer	242
12.6	Electrodeposition of Metal Ions and their Selective Release	244
12.7	Electrochromatographic Solid-Phase Extraction	245
12.7.1	Operational Procedure	245
12.8	Use of Electrochemical Reactions for Decomposition of Metal Complexes	247
12.9	Conclusions	248
12.10	References	248

13 **Pulse Immunoassay and Pulse Electrovoltage for Cell Manipulation and Analytical Coagulation Processes** 249

Eiichi Tamiya

- 13.1 Introduction 249
- 13.2 Pulsed Immunoassay for Pathogenic Cells 249
  - 13.2.1 Experimental Procedures 250
  - 13.2.2 Effect of Pulse Conditions on Linear Agglutination 251
  - 13.2.3 Agglutination by Immunoreaction in an Electric Field 251
  - 13.2.4 Calibration for *C. albicans* 254
- 13.3 Alternating Current Field Enhancing Latex Immunoassay for Human Myoglobin 254
  - 13.3.1 Experimental Procedures 255
  - 13.3.2 Agglutination Induced by a.c. fields 256
  - 13.3.3 Time Course of Immunoreactions 258
- 13.4 A Micromachined Reactor for Latex Immunoassay Enhanced by a.c. Fields 260
  - 13.4.1 Experimental Procedures 260
  - 13.4.2 Design of Micromachined Reactors 260
  - 13.4.3 Application to Immunoassay for AFP 261
- 13.5 Conclusions 263
- 13.6 References 263

14 **Molecular Orientation of Organic Compounds in Electric Fields: Organized Photochemistry** 265

Katsuhiko Takagi

- 14.1 Introduction 265
- 14.2 Photochemical Reactions 266
  - 14.2.1 Applied Electrostatic Fields 266
  - 14.2.2 Spontaneous Electrostatic Fields 270
  - 14.2.3 Micelles 270
  - 14.2.4 Energy and Electron Transfer 271
  - 14.2.5 Miscellaneous Reactions 277
  - 14.2.6 Reversed Micelles 280
  - 14.2.7 Vesicles 282
  - 14.2.8 Mono- and Multilayer Membranes 283
  - 14.2.9 Polyelectrolytes 286
  - 14.2.10 Inorganic Solid Surfaces 287
- 14.3 References 295
