مر

Chapter 1 Int	trodu	ction	
	1.1	What is a vacuum?	1
	1.2	Units of vacuum measurement (non-metric)	6
	1.3	Numbers written as powers of ten	8
	1.4	An early demonstration of vacuum	9
	1.5	Units of vacuum measurement (metric S.I. units)	10
Tigger T	1.6	Variation of pressure with altitude	21
F L	1.7	The vacuum spectrum	25
	1.8	Tabulated highlights in the history of vacuum	25
	1.9	An introduction to the production of vacuum	31
	1.10	Some demonstrations utilising vacuum	35
	1.11	Vacuum measurements on the lunar surface	38
Chapter 2 Ap	oplica	tions	
	2.1	Introduction to vacuum applications	39
The second	2.2	Selected vacuum applications in more detail	41
	2.3	Other examples of vacuum applications	49
Chantan 2 Ca			
Chapter 3 SC	me r	elevant physical concepts	r <b>n</b>
	3.1	States of matter	57
	3.2	Vapours and saturated vapour pressure	58
[]	3.3	Evaporation of water in vacuum	60
	3.4	Boyle's law	61
	3.5	Processes occurring at a boundary wall	62
	3.6	Gas mixtures – partial pressure	64
	3.7	Ionization	64
	3.8	Mean free path, molecular density and monolayer	
		formation time	66
	3.9	Volume flow rate (pump speed)	68
	3.10	Throughput (Q)	69
	3.11	Pressure, speed and throughput relationship	69

# Chapter 4

Vacuun	n measurement				
4.1	4.1 Introduction				
4.2	4.2 Historical overview				
4.3	Vacuum measurement scales	75			
4.4	Gauge terminology	78			
4.5	Active gauging	79			
4.6	Mechanical phenomena gauges	80			
4.7	Transport phenomena gauges	87			
4.8	Ionization phenomena gauges	94			
4.9	Reading analogue gauge scales in powers of ten	102			
4.10	Review of measurement	103			
4.11	Mounting of gauge heads	104			
4.12	Choosing a vacuum gauge	106			
4.13	Uncertainty with the accuracy of measurement	107			
4.14	Calibration of vacuum gauges	108			
Identifi	cation of gases present				

**Chapter 5** 

1	entiti	cation of gases present	
	5.1	How mass spectrometers work	112
	5.2	Some instrument characteristics	115
	5.3	Interpretation of mass spectra	116
	5.4	Qualitative interpretation of actual spectra - an	
		example	120
	5.5	Sources of residual gas	122
	5.6	Differential pumping	125
	5.7	Applications of mass spectrometry	126
		•	

#### Chapter 6 Oil-sealed mechanical rotary pumps

	6.1	Brief history of mechanical rotary pumps	127
	6.2	Rotary-vane pump	128
	6.3	Rotary-piston pump	135
	6.4	Gas ballast	138
$\sum_{i=1}^{n}$	6.5	Rotary pump oils	143
	6.6	Pumping speed and ultimate pressure	146
1	6.7	Back-migration of oil vapour in rotary pumps	148
	6.8	Rotary pump accessories	150
	6.9	Looking after rotary pumps	155

#### Chapter 7 Oil-free mechanical primary pumps

7.1	Dry pumps introduction	159
7.2	Diaphragm pump	161
7.3	The scroll mechanism	163
7.4	The screw mechanism	165
7.5	The mechanical booster (Roots) mechanism	167
7.6	The claw mechanism	181
7.7	'Point-of-use' drypumping	189

9.2	Constructional and mechanical aspects	237
9.3	Magnetic bearing turbomolecular pumps	239
9.4	Molecular drag and compound molecular pumps	245
9.5	Corrosion-resistant variants for harsh conditions	247
9.6	Split flow turbomolecular pumps	249
9.7	Operational aspects	250
9.8	Matching a diaphragm pump to a turbomolecular	
	pump	253
9.9	Troubleshooting turbomolecular pumps	254
9.10	Turbomolecular pump summary	255

Turbomolecular pump summary 9.10

#### Chapter 10 Cryopumps

	10.1	How cryopumps work	257
A NUMBER	10.2	Cryopumping and vapour pressure	262
	10.3	Cryopump system layout	263
	10.4	Operation of a cryopumping system	264
	10.5	Applications	267
	10.6	Looking after cryopumps	268
	10.7	Cryopump safety	270
5	10.8	Cryopump glossary	271
	10.9	Cryopump summary	272
SUSSESS			

Chapter 11	Sorpti	ion and getter pumps	
•	11.1	Sorption pump	274
	11.2	Getter pumps	276
	11.3	Ion pumped systems	283
	11.4	Troubleshooting ion pumped systems	286
YEZ	11.5	Summary: points with respect to sputter-ion pumps	287
Chapter 12	Vacuu	m system components and valves	
	12.1	Demountable joints	288
	12.2	Vacuum valves	300
1 FM	12.3	Vacuum leadthroughs	306
	12.4	Fabrication of vacuum components	308
Chapter 13	Consi	derations in system design	
•	13.1	Conductance	317
	13.2	Gas flow regions	318
	13.3	Conductance of pipelines	320
1 1	13.4	Corrections for other gases and temperatures	324
	13.5	Conductance effect of other vacuum components	325
<u> </u>	13.6	Gas and vapour load	326
	13.7	Notes on UHV system design	331
ELLA	13.8	Pump-down times and pumping-speed - basic	
		calculations	334
	13.9	Various nomograms for estimating conductance.	
		pump-down times and pump size	337
	13.10	Matching pump combinations	341
	13.11	High vacuum pump comparison	343
Chapter 14	Vacuu	m for chemical processes	
S.	14.1	Introduction	346
	14.2	Vacuum measurement units in the chemical process	
<b>R</b> ATE		industry	350
	14.3	Use of rotary pumps	351
T T TO	14.4	Once-through-oil options	357
	14.5	Liquid ring pumps	358
	14.6	Steam ejector pumps	362
	14.7	Summary and comparison of pumps	367
Chapter 15	Vacuu	m leak detection	
	15.1	The need to control leaks	371
	15.2	Leak rate	372
	15.3	The nature and avoidance of leaks	376
	15.0	Non mass spectrometer leak detection methods	370
ЧP	15.5	Mass spectrometer leak detectors	383
X	15.6	General rules for leak detection	300
ےلے	15.0	Using a mass spectromater leak detector	301
	10.1	Song a mass specifonicier reak detector	J)1

د\_

	15.8 Some specific examples of the use of mass spectrom		ter 205
	15.0	Dedicated hash data days for high reduces in dustrial	390
	15.9	Dedicated leak detectors for high-volume industrial	401
		production	401
	15.10	Applications of helium spectrometer leak testing	402
Chapter 16	Guide	to the safe use of vacuum equipment	
	16.1	General precautions	404
	16.2	Hazards associated with particular equipment	405
Questions a	nd ans	wers	
		Questions	416
		Answers	425
Appendices			
	Α	A selected bibliography	430
	В	Glossary	440
	C .	Logarithms and logarithmic scales	443
	D	Simple ideas of atomic structure	445
	Е	Summary of formulae	448
