CONTENTS

Foreword	xi
Preface	xiii

.

Chapter 1 An Overview

I.	Introduction: Why Lie Groups?	1
II.	Holotheticity: Invariance of Production Function	
	under Technical Change	6
III.	Theory of Endogenous Technical Progress	8
IV.	G(Group)-Neutral Technical Change	9
V.	Comparative Statics and Integrability Conditions	10
٧I.	Implicit Technology	10
VII.	Self-Duality	11
VIII.	Dynamic Symmetries and Economic Conservation Laws	13
IX.	Invariance of Index Numbers	14
Χ.	The Group Structure of Observable Market Behavior	15
	Appendix: A Brief Survey of Lie's Theory	
	of Continuous Transformation Groups	16
	References	17

Chapter 2 Holotheticity of a Technology

I.	Introduction and Motivation: Relative Significance	
	of the Scale Economies and Technical Progress	
	(the Solow-Stigler Controversy)	18
		vii

II.	Holotheticity and the Group Properties of Technical	
	Progress Functions	21
III.	Existence of General Holothetic Technology	30
IV.	Existence of a Lie Type of Technical Progress	34
V.	Structures of Holothetic Technology	37
VI.	Holothetic Technologies under Special Types	
	of Technical Change	47
VII.	Simultaneous Holotheticity	61
VIII.	Multifactor Generalization	71
IX.	Estimation of Technical Change	77
	References	81
Chapte	r 3 A Theory of Endogenous Technical Progress	
Т	Introduction	83

1.	nuoduction	05
II.	Formulation of the Model	85
III.	Solution of the Model	91
IV.	Analysis of the Solution	97
	Mathematical Appendix	109
	References	113

Chapter 4 "G-Neutral" Technical Change, Comparative Statics, and Integrability Conditions

I.	"G-Neutral" Types of Technical Change	115
II.	Comparative Statics under r-Parameter Infinitesimal	
	Transformations	133
III.	Integrability Conditions	149
	References	155

Chapter 5 Holotheticity of an Implicit Technology

I.	Introduction and Motivation	157
II.	Implicit Formulation of a Technology Holothetic	
	under a Given Lie Type of Technical Progress	158
III.	General Nonexistence Theorem of a Lie Type of Technical	
	Progress for a Given Implicit Technology	163
IV.	Special Types of Implicit Technologies	168
V.	Analysis of Implicit Technology by r-Parameter Lie	
	Type of Technical Change	172

VI	Two Parameter Groups and Holotheticity of Degree 2	177
V 1.	Two-Taranteter Groups and Holoulettery of Degree 2	1//
VII.	Projective Holotheticity: Holotheticity of Degree 8	182
VIII.	Classification of Implicit CES and Related Technologies	185
	Mathematical Appendix	194
	References	198

Chapter 6 Self-Dual Preferences and Technologies

I.	Introduction: Why Self-Duality?	200
II.	"Exact" (or Strong) Self-Duality	201
III.	Uniform and Self-Dual Demand Functions	207
IV.	Weakly Self-Dual Demand Functions	208
V.	Special Cases of Self-Dual Demand Functions	211
VI.	Method of Deriving Self-Dual Demand Functions	
	by Infinitesimal Transformations	217
VII.	Implicit Self-Duality: Duality of Production	
	and Cost Functions	221
VIII.	Uniformity and Implicit Self-Duality	227
IX.	Duality of Scale Effect between Production	
	and Cost Functions	230
	References	232

Chapter 7 Dynamic Symmetries and Economic Conservation Laws

I.	Introduction	233
II.	Preliminaries: Noether's Theorem and Invariance Identities	236
III.	Conservation Laws in Simple Models of the Ramsey Type	251
IV.	Conservation Laws in "General" Neoclassical Optimal	
	Growth Models	260
ν.	Conservation Laws When There Exists "Technical Change"	274
VI.	Conservation Laws in the von Neumann Model	279
	References	290

Chapter 8 A Lie Group Approach to the Index Number Problems

I.	Introduction	292
Π.	Axioms and Basic Tests	293
III.	Economic Index Numbers	303
IV.	Alternative Definition of the Quantity Index	
	Number—"Dual Quantity Index"	308

V. VI.	Invariant Index Numbers under Taste Change Dynamic Invariance (Symmetry) of Divisia Index Numbers References	312 314 326
Chapte	r 9 The Group Structure and the Theory of Observable Market Behavior	
I.	Introduction	328
П.	Preliminaries: Manifolds and Existence Theory	329
III.	Revealed Preference, Integrability, and Lie Groups	336
IV.	Economic Equilibrium as a Contact Transformation:	
	Recoverability of a Mixed System	343
V.	Simultaneous Recovery Problems: Externality	
	of Production and Preference	351
VI.	Recoverability of Dynamic Systems: Recovery	
	of Optimal Growth Models	356
VII.	The Group Structure of Optimal Dynamic Behavior	367
	References	382
Append	<i>dix</i> A Brief Survey of Lie's Theory of Continuous Transformation Groups	
1.	Essential (or Effective) Parameters	386
II.	Groups and Groups of Transformations	388
III.	One-Parameter Groups	392
IV.	Properties of Groups: Invariant Differential Equations	
	and Extended Groups	400
V.	Complete Systems of Linear Partial Differential Equations	407
VI.	r-Parameter Group of Transformations	412
VII.	Contact Transformations	419
	References	423
