## Preface, vii

## Part 1: Single-Species Populations

### 1 Describing populations, 3

- 1.1 Introduction, 3
- 1.2 Population processes, 3
- 1.3 The diagrammatic life table, 5
  - 1.3.1 General form, 5
  - 1.3.2 The common field grasshopper, an annual species, 6
  - 1.3.3 Ragwort, a biennial, 7
  - 1.3.4 More complex life cycles, 3
  - 1.3.5 Age and stage: the problems of describing some plant and animal populations, 10
- 1.4 Conventional life tables, 13
  - 1.4.1 The cohort life table, 13
  - 1.4.2 The static life table, 17
  - 1.4.3 Résumé, 18
- 1.5 Some generalizations, 18
- 1.6 The modular growth of organisms, 21
- 1.7 Buried seed banks, 26

### 2 Intraspecific competition, 28

- 2.1 The nature of intraspecific competition, 28
- 2.2 Three characteristics of intraspecific competition, 29
- 2.3 Density-dependence: a fourth characteristic, 29
- 2.4 Scramble and contest, 31
- 2.5 Actual effects of intraspecific competition, 33
  - 2.5.1 Palmblad's data, 33
  - 2.5.2 Competition in plants: a deeper look, 37
  - 2.5.3 Individual variability, 42
  - 2.5.4 Self-thinning in plants, 43
  - 2.5.5 Competition in *Patella cochlear*, 48
  - 2.5.6 Competition in the fruit fly, 50
- 2.6 Negative competition, 50

### 3 Models of single-species populations, 52

- 3.1 Introduction, 52
- 3.2 Populations breeding at discrete intervals, 52

- 3.2.1 The basic equations, 52

- 3.2.2 Incorporation of a range of competition, 54

- 3.2.3 Models for annual plants, 56

- 3.3 Continuous breeding, 58

- 3.4 The utility of the equations, 60

- 3.4.1 Causes of population fluctuations, 60

- 3.4.2 The equations as descriptions, 62

- 3.4.3 'Cobwebbing'—a more general approach, 65

- 3.5 Incorporation of age-specific fecundity and mortality, 66

- 3.5.1 The matrix model, 69

- 3.5.2 Using the model, 70

- 3.5.3 A working example: *Poa annua*, 72

## Part 2: Interspecific Interactions

### 4 Interspecific competition, 77

- 4.1 The nature of interspecific interactions, 77

- 4.2 Interspecific competition, 78

- 4.3 A field example: granivorous ants, 78

- 4.4 Competition between plant species: experimental approaches, 83

- 4.4.1 Manipulating density, 83

- 4.4.2 Manipulating resources, 89

- 4.5 The ecological niche, 90

- 4.6 The Competitive Exclusion Principle, 92

- 4.7 Competitive exclusion in the field, 92

- 4.8 Competitive release, 95

- 4.9 Coexistence: resource partitioning, 95

- 4.10 Character displacement, 98

- 4.11 Competition: its avoidance or its non-existence?, 98

- 4.12 Competition and coexistence in plants, 101

- 4.13 A logistic model of two-species competition, 105

- 4.13.1 The model's utility, 107

- 4.13.2 A test of the model: fruit fly competition, 109

- 4.14 Analysis of competition in plants, 110

- 4.15 Niche overlap, 112

- 4.16 Competition and heterogeneity, 114

**5 Predation, 117**

- 5.1 Introduction, 117
- 5.2 Patterns of abundance, 118
- 5.3 Coevolution, and specialization amongst predators, 119
  - 5.3.1 One explanation for the degrees of specialization, 121
  - 5.3.2 Food preference and predator switching, 122
- 5.4 Time and timing, 124
- 5.5 Effects on prey fitness, 125
  - 5.5.1 The effects of herbivores on plant fitness, 126
- 5.6 The effects of predation-rate on predator fitness, 131
  - 5.6.1 Thresholds, 131
  - 5.6.2 Food quality, 132
- 5.7 The functional response of predators to prey availability, 133
  - 5.7.1 The 'type 2' response, 133
  - 5.7.2 The 'type 1' response, 135
  - 5.7.3 Variation in handling time and searching efficiency: 'type 3' responses, 136
  - 5.7.4 Switching and 'type 3' responses, 136
- 5.8 Aggregated effects, 137
  - 5.8.1 Parasite-host distributions, 137
  - 5.8.2 Refuges, 138
  - 5.8.3 Partial refuges: aggregative responses, 139
  - 5.8.4 Further responses to patchiness, 140
  - 5.8.5 'Even' distributions, 141
  - 5.8.6 Underlying behaviour, 142
  - 5.8.7 'Hide-and-seek', 143
- 5.9 Mutual interference amongst predators, 144
  - 5.9.1 A similar effect amongst parasites, 146
- 5.10 Interference and pseudo-interference, 146
- 5.11 Optimal foraging, 148
- 5.12 Résumé, 149
- 5.13 Mathematical models, 149
  - 5.13.1 Host-parasitoid models, 150
  - 5.13.2 Heterogeneity in host-parasitoid interactions, 155
  - 5.13.3 A model of grazing systems, 160
- 5.14 'Patterns of abundance' reconsidered, 164
- 5.15 Harvesting, 165
  - 5.15.1 Characteristics of harvested populations, 165
  - 5.15.2 Harvesting in structured populations, 170
  - 5.15.3 Incorporating population structure: matrix models of harvesting, 173

**Part 3: Synthesis****6 Population regulation, 177**

- 6.1 Introduction, 177
- 6.2 Nicholson's view, 177
- 6.3 Andrewartha and Birch's view, 177
- 6.4 An example: *Thrips imaginis*, 178
- 6.5 Some general conclusions, 180
- 6.6 A life-table analysis of a Colorado beetle population, 181
  - 6.6.1 Life-table data, 181
  - 6.6.2 'Key-factor' analysis, 183
  - 6.6.3 Regulation of the population, 184
  - 6.6.4 A population model, 185
- 6.7 The problem re-emerges, 186
  - 6.7.1 Life-table analyses, 186
  - 6.7.2 Single-species time series, 188
  - 6.7.3 Population regulation in vertebrates, 190
- 6.8 Population regulation in plants, 191
- 6.9 Genetic change, 200
- 6.10 Territoriality, 201
- 6.11 'Space capture' in plants, 203
- 6.12 Chaos in ecological systems, 205

**7 Beyond population ecology, 210**

- 7.1 Introduction, 210
- 7.2 Metapopulation dynamics, 210
  - 7.2.1 Metapopulation models, 210
  - 7.2.2 Examples of metapopulations, 212
  - 7.2.3 Applications of the metapopulation concept, 214
- 7.3 Community structure, 216
  - 7.3.1 The role of interspecific competition, 216
  - 7.3.2 The role of predation, 217
  - 7.3.3 The role of disturbance, 219
  - 7.3.4 The role of instability, 220
  - 7.3.5 The role of habitat size and diversity, 222
  - 7.3.6 Conclusions, 224
