PREFACE vii

Part I: MARKETING MODELS 1

1. INTRODUCTION 3
1.1. Purpose and outline 3
1.2. The model concept 9

2. CLASSIFYING MODELS ACCORDING TO THEIR DEGREE OF EXPLICITNESS 11
2.1. Implicit models 11
2.2. Verbal models 12
2.3. Formalised models 13
2.4. Numerically specified models 16

3 BENEFITS FROM USING MARKETING MODELS 21
3.1 Are marketing problems quantifiable? 21
3.2. Benefits from marketing decision models 23
3.3 Building models to advance our knowledge of marketing 29
3.4. On the use of a marketing model: A case study 32

4. A TYPOLOGY OF MARKETING MODELS 39
4.1. Intended use: Descriptive, predictive, normative models 39
4.2. Demand models: Product class sales, brand sales, and market share models 42
4.3. Behavioural detail: None, some, a substantial amount 44

Part II: BUILDING MARKETING MODELS 49

5. ELEMENTS OF MODEL BUILDING 51
5.1. The model building process 51
5.2. Some basic model building terminology 57

5.3. Specification of behaviour equations: Some simple examples 66
5.3.1. Mathematical forms 66
5.3.1.1. Models linear in parameters and variables 66
5.3.1.2. Models linear in the parameters but not in the variables 67
5.3.1.3. Models nonlinear in the parameters but linearizable 74
5.3.1.4. Models nonlinear in the parameters and not linearizable 78
5.3.2. Modelling marketing dynamics 83
5.3.2.1. One explanatory variable 83
5.3.2.2. Several explanatory variables 94

6. IMPLEMENTATION CRITERIA WITH RESPECT TO MODEL STRUCTURE 99
6.1. Introduction 99
6.2. Implementation criteria 100
6.2.1. Models should be simple 100
6.2.2. Models should be built in an evolutionary way 103
6.2.3. Models should be complete on important issues 103
6.2.4. Models should be adaptive 105
6.2.5. Models should be robust 106
6.3. Can non-robust models be good models? 106
6.4. Robustness related to intended use 110
6.5. Robustness related to the problem situation 116

7. SPECIFYING MODELS ACCORDING TO INTENDED USE 119
7.1. Descriptive models 119
7.2. Predictive models 126
7.3. Normative models 132
7.3.1. A profit maximization model 132
7.3.2. Allocation models 138
Appendix The Dorfman-Steiner theorem 143

8. SPECIFYING MODELS ACCORDING TO DIFFERENT LEVELS OF DEMAND 145
8.1. Product class sales models 145
8.2. Brand sales models 149
8.3. Market share models 155

9. SPECIFYING MODELS ACCORDING TO AMOUNT OF BEHAVIOURAL DETAIL 163
9.1. Models with no behavioural detail 164
9.2. Models with some behavioural detail 165

9.3. Models with a substantial amount of behavioural detail 172

10 STOCHASTIC CONSUMER BEHAVIOUR MODELS 179
10.1. Brand choice and purchase incidence models 179
10.1.1. Brand choice models 181
10.1.1.1. Markov and Bernouilli models 182
10.1.1.2. Learning models 191
10.1.2. Purchase incidence models 196
10.2. Response models based on stochastic models of consumer behaviour 199
10.2.1. Response models based on Markov models 199
10.2.2. Response models based on learning models 202
10.2.3. Response models based on purchase incidence models 202
10.3. A normative model based on a stochastic consumer behaviour model 203

11. PARAMETERIZATION 205
11.1. Organizing data 206
11.2. Estimating parameters in models with no behavioural detail 216
11.2.1. The linear model: Ordinary least squares 217
11.2.2. The linear model: Generalized least squares 220
11.2.3. Estimating parameters in simultaneous equation systems 230
11.2.4. Nonlinear estimation 235
11.3. Parameterization of models with some behavioural detail 241
11.3.1. Parameterization of models of intermediate market response 241
11.3.1.1. Descriptive brand choice models 241
11.3.1.2. Brand choice response models 243
11.3.2. Parameterization of aggregate flow models 245
11.4. Parameterization of models with a substantial amount of behavioural detail 250
11.5. Subjective estimation 251
11.5.1. A justification for subjective estimation 251
11.5.2. Obtaining subjective estimates 253
11.5.2.1. Point estimation 253
11.5.2.2. Probability assessment 259
11.5.3. Combining subjective estimates 266
11.5.3.1. The mathematical approach 267
11.5.3.2. The behavioural approach 270

11.5.4. Combining subjective and objective data 275
11.5.4.1. Formal analysis 275
11.5.4.2. Informal analysis 276

12. VALIDATION 279
12.1. Measure reliability and validity 279
12.2. Face validity 284
12.3. Statistical validation criteria 286
12.3.1. Goodness of fit 286
12.3.2. Reliability of the estimates 289
12.3.3. Multicollinearity 293
12.3.4. Assumptions concerning the disturbance term 296
12.4. Validation criteria related to intended use 299
12.5. Validation of models with no behavioural detail 305
12.6. Validation of models with some behavioural detail 310
12.7. Validation of models with a substantial amount of behavioural detail 313
12.8. Validation of subjective estimates 315

Part III: BUILDING IMPLEMENTABLE MARKETING MODELS 319

13. DETERMINANTS OF MODEL IMPLEMENTATION 321
13.1. Organization validity 323
13.1.1. Matching model and user 323
13.1.2. The model user-model builder interface 325
13.1.3. Contingencies specific to the organization 381
13.2. Elements of implementation strategy 335
13.2.1. Evolutionary model building 337
13.2.2. Model scope 340
13.2.3. Ease of use 348

14. SOME COST-BENEFIT CONSIDERATIONS IN MARKETING MODEL BUILDING 353
14.1. The cost of building models 355
14.2. Measuring benefits 356
14.3. Some qualitative examples 367
14.4. General conclusion 373
