## CONTENTS

1	INTRODUCTION .....	7
2	BACKGROUND .....	9
	2.1 Rationale for developing new design approaches .....	9
	2.2 Imperial College research programmes.....	10
	2.2.1 Research aims.....	10
	2.2.2 Research phases.....	11
	2.2.3 Field tests with instrumented piles.....	13
	2.2.4 Parallel experiments with field-scale driven piles.....	13
3	DESIGN METHODS FOR PILES IN SILICA SAND .....	15
	3.1 Introduction .....	15
	3.2 Shaft friction .....	15
	3.2.1 Basic mechanisms.....	15
	3.2.2 Evaluating short-term shaft capacity of single cylindrical piles.....	16
	3.3 Base resistance.....	22
	3.3.1 Introduction .....	22
	3.3.2 Closed-ended piles.....	22
	3.3.3 Open-ended piles .....	23
	3.4 Axial capacity of piles with non-circular cross-sections .....	26
	3.4.1 Recommendations for rectangular piles.....	26
	3.4.2 Recommendations for H section piles.....	26
4	DESIGN METHODS FOR PILES IN CLAY .....	28
	4.1 Introduction .....	28
	4.2 Shaft friction .....	28
	4.2.1 Basic mechanisms.....	28
	4.2.2 Evaluating shaft capacity of single piles after pore pressure equalisation.....	29
	4.3 Base resistance.....	36
5	RELIABILITY OF THE DESIGN METHODS .....	38
	5.1 Additional entries to the Chow pile load test database .....	38
	5.2 Reliability of shaft capacity predictions in silica sand .....	42
	5.2.1 Shaft capacity database for silica sand .....	42
	5.2.2 Reliability of the ICP shaft method in sand.....	42
	5.3 Shaft capacity in clay .....	46
	5.3.1 Shaft capacity database for clay.....	46
	5.3.2 Reliability of ICP shaft method in clays .....	46
	5.4 Base resistance in sand.....	49
	5.4.1 End bearing database in sand.....	49
	5.4.2 Degree of fit for the ICP end bearing method in sand.....	50

5.5	Base resistance in clay .....	53
5.5.1	End bearing database for clay .....	53
5.5.2	Degree of fit for the ICP end bearing method in clay .....	53
5.6	Independent analyses of ICP methods' predictive reliability.....	54
5.6.1	Reliability for square and H section piles.....	54
5.6.2	Checks by other organisations on reliability for cylindrical driven piles.....	54
5.7	Selection of safety factors in design .....	55
5.7.1	Foundation COVs in mixed soil profiles.....	57
5.7.2	Reliability calibrated against well-established design methods.....	57
5.7.3	Reliability in terms of probability of failure .....	58
5.7.4	Safety Factors for the ICP methods .....	58
6.	TIME EFFECTS IN SAND AND CLAY .....	61
6.1	Time effects in sand .....	61
6.2	Time effects in clay .....	64
6.3	Implications .....	65
7.	GROUP EFFECTS IN SAND AND CLAY .....	66
7.1	Group effects in sand .....	66
7.2	Group effects in clay .....	66
8.	EXPERIENCE WITH OTHER SOIL PROFILES.....	68
8.1	Micaceous sands .....	68
8.2	Calcareous sands .....	68
8.3	Silts and low plasticity clays.....	69
8.3.1	Assessing whether to apply clay or sand design criteria.....	69
8.3.2	Low plasticity, low YSR, sensitive clays and clay-silts .....	70
8.4	Diatomaceous clays and mudstones .....	71
8.5	Layered soil profiles .....	71
9.	CYCLIC LOADING AND SEISMIC ACTION .....	72
9.1	General.....	72
9.2	Recent cyclic pile testing in sand and clay.....	74
9.3	Axial capacity of piles driven in clay under seismic loading.....	77
10.	CONCLUSIONS.....	78
10.1	Main points.....	78
10.2	Check list for sands.....	79
10.3	Check list for clays .....	79
11.	ACKNOWLEDGEMENTS.....	80
12.	REFERENCES .....	81
	APPENDIX A.....	87
	RING SHEAR TESTING METHODOLOGY .....	87

A1.1	Principle of test.....	87
A1.2	Specimen and interface preparation.....	87
A1.3	Test procedure.....	88
APPENDIX B.....		91
CASE HISTORIES AND WORKED EXAMPLES FOR PILES IN SAND AND CLAY.....		91
B1	EURIPIDES.....	92
B1.1	Site conditions.....	92
B1.2	Test pile.....	92
B1.3	Pile capacity prediction.....	92
B1.4	Comparison of calculated and measured capacity.....	95
B2	Pentre.....	96
B2.1	Site conditions.....	96
B2.2	Test pile.....	99
B2.3	Pile capacity prediction.....	99
B2.4	Comparison of calculated and measured capacity.....	101
APPENDIX C.....		102
LIST OF NOTATION.....		102
