

**APPLICATION
DEVELOPMENT
WITHOUT
PROGRAMMERS**

A  James Martin BOOK

CONTENTS

Table of Boxes *xiii*

Preface *xv*

1 The Programming Dilemma *1*

*Introduction 1; People Costs Versus Computer Costs 3;
Application Backlog 4; Invisible Backlog 4;
Alternatives to Programmers 4; The Changing DP Environment 5;
Small Corporations 6; End-User Participation 7; DP Productivity 8;
The Changing Role of the Systems Analyst 10;
What Is Going to Happen to All the Programmers? 10;
Software Firms 11; Two Types of Programmer Personality 12;
References 13*

2 Software for Application Development Without Conventional Programming *14*

*Introduction 14; Seven Types of Software 14;
Suitable for End Users? 16; Integrated Languages 18;
Escape Feature 18; Existing Products 19; On-Line or Off-Line? 25;
What Is Programming? 25; Procedural and Nonprocedural Code 26;
Intelligent Nonprocedural Facilities 26;
The Data-Base Connection 27; Efficiency 27;
Fourth-Generation Languages 28; References 28*

3 Productivity of Application Creation *29*

*Huge Gains 29; Obtaining Information with COBOL 31;
More Complex Requirements 38; Programmer Productivity 38;
Variation in Programmer Skill 39; The Effect of Program Size 40;*

*Complexity 42; Limits to Programmer Productivity 43;
 Very Complex Applications 45; Resistance 45;
 Fitting the Software to the Application 48; Techniques Analyst 48;
 Summary 48; References 49*

4 Problems with Conventional Application Development 51

*Introduction 51; More Rigorous Specifications 51; Failures 52;
 User-Driven Versus Prespecified Computing 54;
 Management Information 56; Structured Analysis 56;
 User Choice 58; Problems with the Specification Process 59;
 The Specification Document 59; User Sign-Off 60;
 Specification Freeze 61; Bugs 61; The Uncertainty Principle 61;
 End-User Learning Curve 62; A New Type of DP Implementation 63;
 Prototyping 64; Three Types of Application Development 65;
 References 68*

5 Case Study of a Medium-Sized Installation 69

*Introduction 69; History 69; End Users 71;
 How Could These Applications Be Created? 71;
 How Should the DP Operation Be Managed? 73; References 75*

6 The Change Needed in DP Management 76

*Introduction 76; A Wall Between User and Programmer 77;
 Solving the Wrong Problem 80; The Information Center Concept 80;
 Information Retrieval 82; Selling the Facilities to Users 82;
 Maintenance 83; Solutions to Maintenance 84; Summary 85;
 References 86*

7 Preprogrammed Application Packages 88

*Introduction 88; NIH Syndrome 88; Packages Are Improving 89;
 Training and Adaptability 89; Maintenance 92;
 Sources of Software 92; Information About Application Packages 95;
 Develop or Buy 95; Pitfalls 95; Acquiring a Package 98;
 Reference 100*

8 Languages for End Users 101

*Introduction 101; Categories of Computer End Users 102;
 Class 4 Users 104; Varieties of End Users 106;
 The Two-Day Test 106; Integrated Set of Products 108;
 Reactive Systems 110; Dialogue Structure 110;
 Mnemonics and Fixed Sequences 111; Avoidance of Mnemonics 112;
 Backtracking After Mistakes 113; Sign-On Procedures 113;
 Desirable Properties of Software for Casual End Users 114;
 Machine Literacy 116; References 116*

9 Data-Base User Languages 118

*Introduction 118; On-Line? Interactive? 118;
 Heuristic Searching 118; Spontaneity 119;
 Standard Data-Base Structure? 120;
 Information Retrieval Systems 120; Forms-Oriented Languages 121;
 Multiple Languages 121; Separate End-User Data Bases 125;
 Automatic Navigation 126; Dynamic Modification 127; GIS 127;
 Easy-to-Use Data-Base Languages 130; QUERY-BY-EXAMPLE 130;
 Unknowledgeable Beginners 133; Updates 134; Arithmetic 134;
 Examples 135; More Complex Queries 136;
 Implicit AND and OR 138; Links Between Tables 138;
 Functions 140; Use of a Condition Box 141;
 Insertions and Deletions 142; ON-LINE ENGLISH 143;
 References 146*

10 Application Generators for End Users 148

*Productivity and the End-User Requirement 148;
 CODASYL End-User Facilities 149; Forms-Oriented Approach 151;
 Dialogue Program Generators 151;
 Dialogues for Generating Dialogues 153; Standard Dialogues 157;
 References 159*

11 End-User-Driven Computing 161

*Introduction 161; White-Collar Productivity 160;
 Manufacturing Case Study 162; Work in Progress 163;
 MAPPER 164; Data Base 164; Data Entry 165; Searching 165;
 Matching Data 166; Report Formatting 166;
 Report Processing Functions 166; Interface to Other Systems 166;
 Training and Help 168; Message Switching 169;
 Usage Coordinator 169; Trial-and-Error Evolution 169;
 Speeding Up Orders 170; What-If Questions? 171;
 Engineering Changes 171; Spread Beyond Manufacturing 171;
 Other Applications 172; The DP Department's Attitude 174;
 Moral 175; References 177*

12 Programming by End Users 178

*The Need for Programming 178;
 End-User Programming Languages 179; Conciseness 180;
 NOMAD 183; Programming for Senior Management 183;
 References 188*

13 The World of APL 189

*Introduction 189; Easy to Begin 189; Calculator Operations 189;
 Vectors and Matrices 191; Reduction 193;*

Report Generation and Query Functions 197;
APL Data Interface 197; ADRS 198;
APL Dialogues for Nonprogrammers 203; References 205

14 NOMAD 206

Conversational and Procedural Modes 206;
Stored Procedures 208; NOMAD's Data Base 208;
Relational Structures 209; Hierarchical Structures 209;
Setting Up the Data Base 209; Types of Data-Base Access 212;
Integrity Controls 212; Security Features 213;
Adding New Data 213; Changing a Set of Values 214;
Loading Other Files into NOMAD 215; Fast Data Entry 215;
NOMAD's List Command 215; "WHAT IF?" Calculations 218;
Textual Reports 219; Relational Operators 219; Graphics 220;
Arrays 222; Procedural Statements 223; Statistics 224;
How Is NOMAD Being Used? 225; References 227

15 How Do We Cross the Barrier to End-User Application Creation? 229

A Cultural Barrier 229; Two Images 230;
DP Management Encouragement of End Users 230;
Software Selection 231; Fear of Terminals 231;
End-User Training 232; DP Leadership 233; Pilot Systems 234;
Selling 234; Motivation 235; Motivation Schemes 236;
Early Adapters 237; Stages of Acceptance 238;
Terminals at Home 239; Top Management 240; Reference 242

16 Application Generation by DP Professionals 243

Introduction 243; IBM's DMS 244; DMS Functions 245;
Use of DMS 246; Panel Description Form 248;
Supervisory Commands 248; Calculation and Logic Commands 250;
DMS Forms 257; File Description Form 257;
Data Transfer Form 257; Generator Human Factoring 257;
How ADF Works 258; ADF Rules 261; Coding Sample 263;
Summary 263; References 264

17 The Vital Role of Data Bases 265

Introduction 265; Reasons for Data Base 265; Administration 267;
File Systems 267; Problems with File Systems 268;
Maintenance 270; Data Independence 271;
Principles of a Data-Base Environment 274; Systems Analysis 276;
Process-Centered Versus Data-Centered Approach 276;
Advantages and Disadvantages 277;

*Four Types of Data Environment 277; Files 279;
 Subject Data Bases Versus Application Data Bases 279;
 Class II Environment 281; Class III Environment 281;
 Disintegration 281; Class IV Environment 282;
 Extráctor Program 283; Redundancy 285; Data-Base Design 286;
 References 286*

18 Performance Considerations 287

*Introduction 287; Efficiency 287; Common Code Modules 289;
 Acrobats 290; Dangers of End-User Languages 290;
 Types of Data-Base Activity 291; Automatic Optimization 292;
 Dedicated Machines 293; Expense 294;
 Categories of Data System 294; Separate Systems 295;
 System Interference 296; Excessive Growth in Utilization 297;
 References 297*

19 Information Center Management 298

*The Need for Management 298; Executive's Workbench 299;
 Virtual Filing Cabinet 300; Information Center Support 301;
 Information Center Organization 302; Differences in Scope 303;
 Techniques Analyst 304; Functions of IC Staff 305; Selling 307;
 Rivalry 307; Languages Supported 308; Communication Skills 309;
 Early Success 312; Spreading the Success 312;
 The Importance of Data Administration 313; Data Coordinator 313;
 Other Regulation 314; Auditors 315; References 315*

20 Information Centers in Practice 316

*Financial Advantages 316; Businesspeople in Control 318;
 Flexibility and Rapid Change 320; Pilot Systems 321;
 Transition Phase 322; Graphics 323; Degree of Commitment 323;
 Top Management Support 324;
 Information Center Staff Should Develop Applications 325;
 Spreading the Techniques 326; Staff Without DP Experience 327;
 Data Entry 328; Availability 329; How to Succeed 330*

21 The Changing Role of the Systems Analyst 331

*Productivity 331; Guidance for User-Driven Systems 332;
 Total Change in Systems Analysts' Job 332;
 Escape from Earlier Disciplines 333;
 Aspects of the New Role of Systems Analysts 334;
 Specialization 337; Input to Information Systems 338;
 Summary 339; References 340*

Index 341
