# Contents

Preface	vii
<b>1: A perspective on aptitude and instruction</b>	<b>1</b>
The educational context	1
The methodological context	2
The social and philosophical context	6
The plan of this book	12
<b>2: Methods for research on interaction</b>	<b>15</b>
The basic concept of interaction	17
Interactions as functional relations	24
Multivariate regression	35
The utility of placement decisions	40
Design of Aptitude $\times$ Treatment Interaction [ATI] studies	42
<b>3: Testing hypotheses about interactions</b>	<b>51</b>
Rigor vitae	51
Analysis of variance	61
Testing parallelism of regressions	62
Generalized regression analysis	65
<b>4: Statistical analysis: Advanced topics</b>	<b>69</b>
Generalized regression analysis: Complex cases	69
Gain scores as the dependent variable	73
Improving the interpretation of anova	76

More on power in significance tests	80
Confidence intervals for regression effects	86
Structural regression	94
A radical reappraisal of the ATI model	99
<b>5: Learning rates as a reflection of aptitude</b>	<b>107</b>
Reasons for interest in learning rate	107
Learning curves and learning rates	113
Change in performance seen as multivariate	116
The extended course of learning	122
Learning abilities: Their number and aptitude correlates	132
The Overlap Hypothesis revisited	142
<b>6: Conceptualizing aptitudes and treatments</b>	<b>151</b>
Intellectual abilities and their organization	152
Analysis of instructional treatments	164
Matching aptitudes and treatments	169
Perspective	173
<b>7: Interaction of abilities with variations in instructional programming</b>	<b>175</b>
Comparisons of programmed and conventional instruction	178
Overtness of response as a treatment variable	190
Redundancy and regularity as programming variables	196
Variations of technique in PI	209
Conclusion	213
<b>8: Interactions in reading and arithmetic instruction</b>	<b>217</b>
The teaching of reading	217
Meaningfulness of instruction	245
<b>9: Interactive effects of making instruction less verbal</b>	<b>257</b>
Communication using symbols	257
Pictorial presentations	266
Summary	291
<b>10: Interactions of abilities with variations in curriculum and instruction</b>	<b>295</b>
Research on innovative curricula	295
Inductive teaching	311
Types of classroom interaction	320
Interactions of teacher characteristics with student ability	326
Ability grouping	334

<b>11: Cognitive skills, structures, and styles</b>	<b>341</b>
Categories of ATI process	341
Enhancing observation and analysis	342
Augmenting comprehension	350
Promoting logical analysis and inference	360
Cognitive styles	375
<b>12: Personality x Treatment interactions: General issues and studies of anxiety</b>	<b>393</b>
Formal problems of design and analysis	394
Multitrait exploratory studies	405
Conceptual problems	409
Interactions of Anxiety with task characteristics	414
Interactions of Anxiety with motivational conditions	431
<b>13: Student personality and the environment for learning</b>	<b>441</b>
Two exemplary investigations	442
Interactions of constructive and defensive motivation	445
Interactions of affiliative motives	472
Student preferences and beliefs	476
A study of "teachability"	480
Interactions indicated by demographic classifications of students	482
<b>14: What do we know about Aptitude x Treatment Interaction?</b>	
<b>What should we learn?</b>	<b>491</b>
Do ATI exist?	492
Effects associated with general abilities	496
Interactive effects of specialized abilities	505
Interactive effects of traits and styles	507
Recommendations regarding research strategy and procedure	509
Can placement policies be derived from ATI generalizations?	517
Criticisms made of the ATI approach	519
Ways to adapt instruction	522
<b>References</b>	<b>525</b>
<b>Subject Index</b>	<b>561</b>
<b>Index of Authors</b>	<b>567</b>
