RESERVOIR ENGINEERING HANDBOOK

Second Edition

Tarek Ahmed

Gulf Professional Publishing Boston • London • Auckland • Johannesbourg • Melbourne • New Delhi

CONTENTS

Acknowledgments, *xiii* Preface to the Second Edition, *xiv* Preface to the First Edition, *xv*

1	Fundamentals of Reservoir Fluid Behavior	1
	Classification of Reservoirs and Reservoir Fluids, 1;	
	Pressure-Temperature Diagram, 2; Oil Reservoirs, 4;	
	Gas Reservoirs, 10; Undefined Petroleum Fractions, 24;	
Problems, 27; References, 28.		
2	Reservoir-Fluid Properties	29
	Properties of Natural Gases, 29; Behavior of Ideal Gases, 30;	
	Behavior of Real Gases, 36; Effect of Nonhydrocarbon Components	
	on the Z-Factor, 44; Nonhydrocarbon Adjustment Methods, 45;	
	Correction for High-Molecular-Weight Gases, 49; Direct Calculation	
	of Compressibility Factors, 54; Compressibility of Natural Gases, 59;	
	Gas Formation Volume Factor, 65; Gas Viscosity, 67; Methods of	
	Calculating the Viscosity of Natural Gases, 68; Properties of Crude	
	Oil Systems, 74; Crude Oil Gravity, 75; Specific Gravity of the	
	Solution Gas, 76; Gas Solubility, 77; Bubble-Point Pressure, 86;	
	Oil Formation Volume Factor, 92: Isothermal Compressibility	

Coefficient of Crude Oil, 98; Oil Formation Volume Factor for Undersaturated Oils, 103; Crude Oil Density, 106; Crude Oil Viscosity, 108; Methods of Calculating Viscosity of the Dead Oil, 109; Methods of Calculating the Saturated Oil Viscosity, 111; Methods of Calculating the Viscosity of the Undersaturated Oil, 112; Surface/Interfacial Tension, 115; Properties of Reservoir Water, 118; Water Formation Volume Factor, 118; Water Viscosity, 119; Gas Solubility in Water, 119; Water Isothermal Compressibility, 120; Problems, 120; References, 126.

Composition of the Reservoir Fluid, 131; Constant-Composition Expansion Tests, 131; Differential Liberation (Vaporization) Test, 143; Separator Tests, 146; Adjustment of Differential Liberation Data to Separator Conditions, 151; Extrapolation of Reservoir Fluid Data, 158; Correcting Constant-Composition Expansion Data, 158; Correcting Differential Liberation Data, 160; Correcting Oil Viscosity Data, 161; Correcting the Separator Tests Data, 163; Laboratory Analysis of Gas Condensate Systems, 165; Recombination of Separator Samples, 165; Constant-Composition Test, 168; Constant-Volume Depletion (CVD) Test, 170; Problems, 178; References, 182.

4 Fundamentals of Rock Properties 183

Porosity, 184; Saturation, 189; Wettability, 193; Surface and Interfacial Tension, 194; Capillary Pressure, 197; Permeability, 221; The Klinkenberg Effect, 228; Averaging Absolute Permeabilities, 235; Weighted-Average Permeability, 236; Harmonic Average Permeability, 239; Geometric Average Permeability, 243; Absolute Permeability Correlations, 244; Rock Compressibility, 248; Net Pay Thickness, 254; Reservoir Heterogeneity, 255; Vertical Heterogeneity, 256; Areal Heterogeneity, 268; Problems, 273; References, 278.

5 Relative Permeability Concepts 280

Two-Phase Relative Permeability, 281; Drainage Process, 285; Imbibition Process, 286; Two-Phase Relative Permeability Correlations, 286; Relative Permeability from Capillary Pressure Data, 292; Relative Permeability from Analytical Equations, 294; Relative Permeability Ratio, 298; Dynamic Pseudo-Relative Permeabilities, 301; Normalization and Averaging Relative Permeability Data, 304; Three-Phase Relative Permeability, 310; Three-Phase Relative Permeability Correlations, 312; Problems, 319; References, 320.

Types of Fluids, 322; Flow Regimes, 324; Reservoir Geometry, 326; Number of Flowing Fluids in the Reservoir, 329; Fluid Flow Equations, 330; Darcy's Law, 331; Steady-State Flow, 332; Linear Flow of Incompressible Fluids, 333; Linear Flow of Slightly Compressible Fluids, 339; Linear Flow of Compressible Fluids (Gases), 341; Radial Flow of Incompressible Fluids, 344; Radial Flow of Slightly Compressible Fluids, 350; Radial Flow of Compressible Gases, 352; Horizontal Multiple-Phase Flow, 360; Unsteady-State Flow, 363; Radial Flow of Slightly Compressible Fluids, 370; Constant-Terminal-Pressure Solution. 374: Constant-Terminal-Rate Solution, 374; Radial Flow of Compressible Fluids, 392; Pseudosteady-State Flow, 403; Radial Flow of Slightly Compressible Fluids, 409; Radial Flow of Compressible Fluids (Gases), 418; Skin Factor, 420; Turbulent Flow Factors, 426; Principle of Superposition, 431; Effects of Multiple Wells, 432; Effects of Variable Flow Rates, 435; Effects of the Reservoir Boundary, 438; Transient Well Testing, 442; Drawdown Test, 443; Pressure Buildup Test, 456; Problems, 465; References, 471.

7 Oil Well Performance 473

Vertical Oil Well Performance, 473; Vogel's Method, 482; Saturated Oil Reservoirs, 483; Undersaturated Oil Reservoirs, 485; Wiggins' Method, 491; Standing's Method, 494; Fetkovich's Method, 498; The Klins-Clark Method, 514; Horizontal Oil Well Performance, 515; Horizontal Well Productivity Under Steady-State Flow, 519; Borisov's Method, 520; The Giger-Reiss-Jordan Method, 520; Joshi's Method, 521; The Renard-Dupuy Method, 522; Horizontal Well Productivity Under Semisteady-State Flow, 527; Problems, 529; References, 531.

8 Gas Well Performance 533

Vertical Gas Well Performance, 533; Region I. High-Pressure Region, 536; Region II. Intermediate-Pressure Region, 537; Region III. Low-Pressure Region, 537; The Simplified Treatment Approach, 543; The Laminar-Inertial-Turbulent (LIT) Approach, 545; The Back-Pressure Test, 550; Future Inflow Performance Relationships, 559; Horizontal Gas Well Performance, 562; Problems, 566; References, 568.

ix

9 Gas and Water Coning 569

Coning, 570; Coning in Vertical Wells, 573; Vertical Well Critical Rate Correlations, 573; The Meyer-Garder Correlation, 574; The Chierici-Ciucci Approach, 581; The Hoyland-Papatzacos-Skjaeveland Method, 593; Critical Rate Curves by Chaney et. al., 597; Chaperson's Method, 604; Schols' Method, 605; Breakthrough Time in Vertical Wells, 606; The Sobocinski-Cornelius Method, 606; The Bournazel-Jeanson Method, 609; After Breakthrough Performance, 610; Coning in Horizontal Wells, 615; Horizontal Well Critical Rate Correlations, 616; Chaperson's Method, 616; Efros' Method, 620; Karcher, et al. Method, 621; Joshi's Method, 622; Horizontal Well Breakthrough Time, 624; The Ozkan-Raghavan Method, 624; Papatzacos et al. Method, 627; Problems, 632; References, 634.

Classification of Aquifers, 637; Recognition of Natural Water Influx, 640; Water Influx Models, 641; Pot Aquifer Model, 642; Schilthuis' Steady-State Model, 645; Hurst's Modified Steady-State Model, 649; The Van Everdingen-Hurst Unsteady-State Model, 653; Edge-Water Drive, 654; Bottom-Water Drive, 677; The Carter-Tracy Water Influx Model, 703; Fetkovich's Method, 707; Problems, 713; References, 716.

Primary Recovery Mechanisms, 718; Rock and Liquid Expansion, 718; Depletion Drive Mechanism, 719; Gas Cap Drive, 721; Water Drive Mechanism, 726; Gravity Drainage Drive, 730; Combination Drive Mechanism, 735; The Material Balance Equation, 736; Basic Assumptions in the MBE, 751; The MBE as an Equation of a Straight Line, 753; The Straight Line Solution Method to the MBE, 755; Case 1. Volumetric-Undersaturated Oil Reservoirs, 755; Case 2. Volumetric-Saturated Oil Reservoirs, 760; Case 3. Gas-Cap Drive Reservoirs, 762; Case 4. Water Drive Reservoirs, 766; The Pot-Aquifer Model in the MBE, 768; The Steady-State Model in the MBE, 769; The Unsteady-State Model in the MBE, 770; 'Tracy's Form of the Material Balance Equation, 774; Problems, 778; References, 781.

Phase 1. Reservoir Performance Prediction Methods, 783; Instantaneous Gas-Oil Ratio, 783; The Reservoir Saturation Equations, 789; Undersaturated Oil Reservoirs, 797; Saturated Oil Reservoirs, 801; Tracy's Method, 803; Muskat's Method, 810; Tarner's Method, 815; Phase 2. Relating Reservoir Performance to Time, 822; Problems, 825; References, 825.

1.

The Volumetric Method, 828; The Material Balance Method, 831; Volumetric Gas Reservoirs, 832; Water-Drive Gas Reservoirs, 840; The Material Balance Equation as a Straight Line, 842; Abnormally Pressured Gas Reservoirs, 847; The Effect of Gas Production Rate on Ultimate Recovery, 853; Problems, 854; References, 856.

14 Principals of Waterflooding 857

Factors to Consider in Waterflooding, 858; Optimum Time to Waterflood, 863; Effects of Trapped Gas on Waterflood Recovery, 865; Overall Recovery Efficiency, 880; Aereal Sweep Efficiency, 932; Vertical Sweep Efficiency, 989; References, 1024.

15 Vapor-Liquid Phase Equilibria...... 1026

Vapor Pressure, 1026; Equilibrium Ratios, 1029; Flash Calclations, 1033; Equilibrium Ratios for Real Solutions, 1037; Equilibrium Ratios for the Plus-Fraction, 1050; Applications of the Equilibrium Ratio in Reservoir Engineering, 1052; Splitting and Lumping Schemes of the Plus-Fraction, 1137; Problems, 1155; References, 1159.

Index, 1177
