<b>List of contributors</b>	<b>ix</b>
<b>Preface</b>	<b>xi</b>
<b>1 Design requirements for aerospace structural materials</b>	<b>1</b>
<i>C.J. Peel and P.J. Gregson</i>	
1.1 Introduction	1
1.2 Properties that affect structural efficiency <i>ab initio</i>	3
1.3 Properties affecting cost of ownership	25
1.4 Cost-effective design	45
1.5 Concluding remarks	47
References	48
<b>2 Aluminium alloys: physical metallurgy, processing and properties</b>	<b>49</b>
<i>P.J. Gregson</i>	
2.1 Introduction	49
2.2 Aluminium alloys: processing and properties	50
2.3 Conventional aerospace aluminium alloys	64
2.4 Advanced aerospace aluminium alloys	72
2.5 Conclusions	83
References	83
Further reading	83
<b>3 Titanium alloys: production, behaviour and application</b>	<b>85</b>
<i>J.C. Williams</i>	
3.1 Introduction	85
3.2 Brief summary of the metallurgy of conventional Ti alloys	86
3.3 The production of Ti alloys and Ti alloy components	92
3.4 The mechanical behaviour and properties of common Ti alloys	104

3.5	Ti-based intermetallic compounds	127
3.6	Summary	132
	Acknowledgements	132
	References	132
	Further reading	133
<b>4</b>	<b>Nickel-based alloys: recent developments for the aero-gas turbine</b> <i>M. McLean</i>	<b>135</b>
4.1	Background	135
4.2	Alloy constitution and development trends	137
4.3	Processing developments	142
4.4	Microstructure and high temperature deformation	145
4.5	Turbine disk applications	148
4.6	Future prospects	153
	References	154
<b>5</b>	<b>Structural steels</b> <i>D.P. Davies</i>	<b>155</b>
5.1	Introduction	155
5.2	Gear steels	155
5.3	Bearing steels	166
5.4	Ultra high strength steels	174
	Acknowledgements	180
	References	180
<b>6</b>	<b>Ceramic materials in aerospace</b> <i>D.M. Dawson</i>	<b>182</b>
6.1	Introduction	182
6.2	Monolithic and toughened ceramics	183
6.3	Composite ceramics	193
<b>7</b>	<b>Polymeric-based composite materials</b> <i>N. Marks</i>	<b>203</b>
7.1	Introduction	203
7.2	Reinforcements	203
7.3	Matrices	210
7.4	Interface	213
7.5	Processing	215
7.6	Properties	223
7.7	Joining composites	224
7.8	Non-destructive testing (NDT)	224
7.9	Advantages of composite materials	224
<b>8</b>	<b>Metal-based composite materials</b> <i>H.M. Flower</i>	<b>227</b>
8.1	Introduction	227
8.2	Metal-ceramic composites	228
8.3	Laminates	235

8.4	Cost	236
8.5	Applications	237
8.6	Appendix	239
	References	245
<b>9</b>	<b>Superplastic forming</b> <i>D. Stephen</i>	<b>246</b>
9.1	Introduction	246
9.2	Superplasticity and its characteristics	247
9.3	Aerospace superplastic alloys	258
9.4	Post-superplastic straining mechanical properties	261
9.5	Superplastic forming (SPF)	262
9.6	Advantages of SPF in aerospace structural design/manufacture	267
9.7	Aerospace applications of SPF	268
9.8	SPF/DB	270
9.9	Advantages of SPF/DB in aerospace structural design/manufacture	276
9.10	Aerospace applications of SPF/DB	276
9.11	Background to the application of SPF and SPF/DB in aerospace	277
	References	281
<b>10</b>	<b>Joining advanced materials by diffusion bonding</b>	<b>283</b>
	<i>P.G. Partridge and A. Wisbey</i>	
10.1	Introduction	283
10.2	Diffusion bonding mechanisms	285
10.3	Effect of surface roughness and contamination on bond interface defects	289
10.4	Testing of diffusion bonded joints	291
10.5	Diffusion bonding techniques of metals	294
10.6	Diffusion bonding of intermetallics	303
10.7	Diffusion bonding of ceramics	303
10.8	Diffusion bonding of composites	305
10.9	Diffusion bonding of dissimilar metallic materials	307
10.10	Diffusion bonding of metastable alloys	309
10.11	Manufacture of components by diffusion bonding techniques	310
10.12	Conclusions	315
	Acknowledgements	316
	References	316
<b>11</b>	<b>Adhesive bonding for aerospace applications</b> <i>D. Driver</i>	<b>318</b>
11.1	Introduction	318
11.2	Bonded wooden aircraft	319

11.3	Principles of bonding	321
11.4	Aerospace adhesive types	323
11.5	Surface treatments	329
11.6	Design of bonded joints	333
	References	338
<b>12</b>	<b>Rapid solidification and powder technologies for aerospace</b>	<b>340</b>
	<i>H. Jones</i>	
12.1	Introduction	340
12.2	Production technologies	341
12.3	Effects on microstructure	346
12.4	Benefits of rapid solidification for aerospace applications	351
12.5	Conclusions	353
	References	353
<b>13</b>	<b>Hot isostatic processing</b> <i>B.A. Rickinson and S. Andrews</i>	<b>357</b>
13.1	Introduction	357
13.2	Removal of porosity	361
13.3	Benefits of HIP	361
13.4	Applications of HIP	362
13.5	Powder products	368
13.6	Diffusion bonding	371
13.7	Other applications	372
	<b>Index</b>	<b>375</b>
