Inv.-Nr. BM 21/95

Contents

1. Introduction	1
2. Scattering Amplitude and Its Properties	11
2.1 Formulation of Problem and Some Auxiliary Relations	11
2.2 Scattering Amplitude	18
2.3 Reciprocity Theorem and Unitarity Condition	27
2.4 Scattering Amplitude for Statistical Case	33
3. Helmholtz Formula and Rayleigh Hypothesis	43
3.1 Helmholtz Formula	44
3.2 Rayleigh Hypothesis	54
3.3 Analytical Properties of Surface Sources Density Function ...	63
3.4 Rayleigh Hypothesis and Lippman Argument: Completeness of Set of the Plane Waves	66
4. Small Perturbation Method	73
4.1 Dirichlet Problem	75
4.2 Small Perturbation Method and the Rayleigh Hypothesis	81
4.3 Neumann Problem	86
4.4 Scattering of Electromagnetic Waves at a Perfectly Conducting Boundary	89
4.5 Scattering of Sound Waves at the Interface Between Liquid Half-Spaces	95
4.6 Electromagnetic Wave Scattering at the Interface Between Two Dielectrics	101
5. Kirchhoff–Tangent Plane Approximation	109
5.1 Tangent Plane Approximation	110
5.2 Kirchhoff Approximation	119
5.3 Corrections to the Kirchhoff Approximation: Deterministic Case	127
5.4 Corrections to the Kirchhoff Approximation: Statistical Case .	134
5.5 Two-Scale Model	141
6. “Nonclassical” Approaches to Wave Scattering at Rough Surfaces	147
6.1 Small Slope Approximation	148
6.2 Small Slope Approximation and Rayleigh Equation. Numerical Experiments	163

6.3 Phase Perturbation Technique	173
6.4 Phase Operator Method for Dirichlet Problem	180
6.5 Meecham–Lysanov Approach	191
6.6 Relation Between Bahar’s Full-Wave Approach and Small Slope Approximation	194
7. Waveguide with Statistically Rough Boundary in Noncorrelated Successive Reflections Approximation	201
7.1 Directional Source in the Waveguide with Rough Boundary: General Solution	202
7.2 Average Field	205
7.3 Correlation Function of the Field	208
7.4 Radiative Transport Theory	213
7.5 Problem of Noise Surface Sources: Diffusion Approximation .	216
References	223
Subject Index	227
