Ground Movements and Pore Pressures Induced by Shield Tunneling in Soft Ground

Reihe **4**: Bauingenieurwesen Nr. **105**

LHB 11 906 893

VDI VERLAG

CONTENTS

Chapter	**1**	**Introduction and literature review**	
	1.	Introduction	1
	2.	Numerical methods of predicting the ground movements	2
	2.1	Construction simulation	2
	2.2	Constitutive models	3
	2.3	Coupled analysis	4
	3.	Objective and outline of the research work	5
	3.1	Statement of the problem	5
	3.2	Outline of the research work	6
Chapter	**2**	**Strain-dependent elastoplastic constitutive model**	
	1.	Background of the research	8
	2.	Theory of plastic increment	9
	2.1	Yield surface	9
	2.2	Flow rule	10
	2.3	Strain hardening law	11
	3.	Laboratory tests	12
	3.1	Test equipment	12
	3.2	Test method	17
	3.3	Specimens	19
	3.4	Physical and mechanical properties of the soil	21
	3.5	Determination of bulk modulus K	22
	3.6	Determination of shear modulus G	24
	3.7	Determination of the yield surface function f	25
	3.8	Determination of the strain hardening parameter H	27
	3.8.1	Relationship between p'_o and $\epsilon_{vo}{}^p$	28
	3.8.2	Relationship between H and $\epsilon_{vo}{}^p$	29
	3.8.3	Relationship between $\epsilon_v{}^p$, $\epsilon_s{}^p$ and $\epsilon_{vo}{}^p$	30
	3.9	Comparison of the model curves and test data	33
Chapter	**3**	**Viscoplastic constitutive relationship**	
	1.	Form of viscoplastic constitutive equation	35
	2.	Viscoplastic relationship in p'–q plane	36
	3.	Triaxial creep tests	37
	3.1	Test method	37

	3.2	Test results	38
	3.3	Determination of relationship between plastic strain rate and yield surface function	45
	3.3.1	Effect of strain hardening parameter on yield surface function	45
	3.3.2	Plastic deviatoric strain rates at different deviatoric stress levels	46
	3.3.3	Relationship between plastic deviatoric strain rates and the yield surface function	47
Chapter	4	**The numerical analysis of coupled viscoplastic shear and consolidation problem**	
	1.	Assumptions adopted for the derivations in this chapter	49
	2.	Equations derivation	49
	2.1	Effective stress–constitutive relationship	49
	2.2	The flow continuity relationship	51
	3.	Finite element code	52
	3.1	Introduction	52
	3.2	Flow chart of the main program	54
	4.	Finite element mesh and soil parameters for the proposed model	55
	4.1	Finite element mesh	55
	4.2	Soil parameters for the proposed model	55
	4.3	Gap parameter for describing ground loss	57
	5.	Analyses of the calculated results	58
	5.1	Results by using the parameters for the proposed model	58
	5.2	Disturbed zone due to shield advance	65
	6.	Parametric study	66
	6.1	Effect of soil strength on displacements	66
	6.2	Effect of soil strength on excess pore pressures	68
	6.3	Effect of gap size on displacements	68
Chapter	5	**Field measurement of ground movements and pore pressure variations induced by EBP shield tunnelling**	
	1.	Introduction	75
	2.	General description of the project	76
	2.1	Technical data of the shield machine	76
	2.2	Lining	76

	2.3	Geological formation	78
	2.4	The construction parameters	78
	3.	Instruments and instruments arrangement	79
	4.	Variation of pore pressure	83
	4.1	Distributions and variations of pore pressure along horizontal direction in the cross section	83
	4.2	Distributions and variation of pore pressure along vertical direction in the cross section	89
	5.	Vertical displacements	94
	5.1	Vertical displacements in the tunnel cross section	94
	5.2	Vertical displacements along the tunnel's axis	98
	5.3	Consolidation settlements in cross section	100
Chapter	**6**	**Summary and conclusions**	
	1.	Constitutive model	102
	2.	Numerical analysis	102
	3.	Tunnel driving	103
