Table of Contents

1 Introduction **1**

1.1 Motivation 1

1.2 Scope and outline of the thesis 2

2 Space missions for soil investigation – historical overview **5**

2.1 The Period from 1966 to 1975 6

2.2 The Period from 1976 to 2000 8

2.3 The Period since 2001 10

3 The Martian surface **12**

3.1 General information 12

3.2 Surface properties - state of knowledge 14

3.3 Determination of the surface stiffness 17

3.4 General remarks on the Martian surface 22

3.5 Martian analogue materials 22

3.6 Description of selected materials 23

3.6.1 Salten Skov 23

3.6.2 JSC-Mars 1 24

3.6.3 Schwarzl UK4 24

3.6.4 Fohnsdorfer Haldit 24

4 Geotechnical characterisation of Martian analogue materials **25**

4.1 General information 25

4.2 Description of tests 25

4.2.1 Chemistry 25

4.2.2 Mineralogy 26

4.2.3 Shape of grains 31

4.2.4 Particle size distribution 31

4.2.5 Density parameters 33
4.2.6 Stiffness parameters 35
4.2.7 Shear strength parameters 44

4.3 Discussion of results 47

5 Laboratory penetration tests 50

5.1 Introduction 50
5.2 Cone penetration testing in geotechnical practice 50

5.2.1 CPT – field tests 51
5.2.2 CPT – calibration chamber tests 52

5.3 Penetrometry test rig 53

5.3.1 Frame and drive motor 55
5.3.2 Conditioning and control electronics 58
5.3.3 Data acquisition device 59

5.4 Description of testing procedure 59

5.4.1 Sample preparation 59
5.4.2 Influence of boundaries 60
5.4.3 Control and evaluation software 61

5.5 Results and evaluation 62

5.5.1 Influence of dry density 63
5.5.2 Influence of tip shape 64
5.5.3 Comparison of materials 66
5.5.4 Investigation of layered samples 67
5.5.5 Small scale structure detection 68

6 Numerical simulation of penetration process 72

6.1 Introduction 72
6.2 Discrete element model 73

6.2.1 General information 73
6.2.2 Calculation procedure in PFC^{3D} 74
6.2.3 Derivation of input parameters 79
6.2.4 Model description 81
6.2.5 Results and evaluation 85

6.3 Finite element model 92

6.3.1 General information 92
6.3.2 Basics on finite element modelling 93
6.3.3 Constitutive models 94
6.3.4 Model description 99
6.3.5 Results and evaluation 105

7 Comparative evaluation of results 115

7.1 Correlation between DEM and FEM 115
7.2 Correlation between laboratory tests and numerical calculations 117
7.3 Derivation of mechanical parameters 119
7.4 Application of the results 121

8 Summary and outlook 125

8.1 Summary 125
8.2 Outlook 127

9 Bibliography 128
