Contents

Preface xi

Chapter 1. General Principles 1

1.1 The Electromagnetic Spectrum 1
1.2 Light Wave Propagation 3
1.3 Snell's Law of Refraction 4
1.4 The Action of Simple Lenses and Prisms on Wave Fronts 8
1.5 Interference and Diffraction 11
1.6 The Photoelectric Effect 16

Chapter 2. Image Formation (First-Order Optics) 19

2.1 19
2.2 Cardinal Points of an Optical System 20
2.3 Image Position and Size 22
2.4 Refraction of a Light Ray at a Single Surface 28
2.5 The Paraxial Region 30
2.6 Paraxial Raytracing through Several Surfaces 31
2.7 Focal Points and Principal Points of a Single Lens Element 36
2.8 The Thin Lens 39
2.9 *Mirrors* 41
2.10 Systems of Separated Components 43
2.11 The Optical Invariant 47
2.12 Matrix Optics 51
2.13 The *y*-*ybar* Diagram 52
2.14 The Scheimpflug Condition 52
2.15 Summary of Sign Conventions 52

Chapter 3. Aberrations 57

3.1 57
3.2 The Aberration Polynomial and the Seidel Aberrations 58

3.3 Chromatic Aberrations 68
3.4 The Effect of Lens Shape and Stop Position on the Aberrations 70
3.5 Aberration Variation with Aperture and Field 74
3.6 Optical Path Difference 75
3.7 Aberration Correction and Residuals 76
3.8 Ray Intercept Curves and the "Orders" of Aberrations 79

Chapter 4. Prisms and Mirrors 87

4.1 87
4.2 Dispersing Prisms 87
4.3 The Thin Prism 89
4.4 Minimum Deviation 90
4.5 The Achromatic Prism and the Direct Vision Prism 90
4.6 Total Internal Reflection 92
4.7 Reflection from a Plane Surface 93
4.8 Plane Parallel Plates 96
4.9 The Right Angle Prism 100
4.10 The Roof Prism 103
4.11 Erecting Prism Systems 104
4.12 Inversion Prisms 107
4.13 The Penta Prism 108
4.14 Rhomboids and Beam Splitters 110
4.15 Plane Mirrors 112
4.16 The Design of Prism and Reflector Systems 113
4.17 Analysis of Fabrication Errors 117

Chapter 5. The Eye 119

5.1 119
5.2 The Structure of the Eye 120
5.3 Characteristics of the Eye 122
5.4 Defects of the Eye 129

Chapter 6. Stops and Apertures 133

6.1 133
6.2 The Aperture Stop 134
6.3 The Field Stop 135
6.4 Vignetting 135
6.5 Glare Stops and Baffles 139
6.6 The Telecentric Stop 142
6.7 Apertures and Image Illumination — *f*-Stops and Cosine-Fourth 142
6.8 Depth of Focus 145
6.9 Diffraction Effects of Apertures 148
6.10 Resolution of Optical Systems 151
6.11 Diffraction of a Gaussian (Laser) Beam 155

Chapter 7. Optical Materials and Interference Coatings 161

7.1 Reflection, Absorption, Dispersion 161
7.2 Optical Glass 166
7.3 Special Glasses 172
7.4 Crystalline Materials 175
7.5 Plastic Optical Materials 177
7.6 Absorption Filters 179
7.7 Diffusing Materials and Projection Screens 181
7.8 Polarizing Materials 185
7.9 Dielectric Reflection and Interference Filters 187
7.10 Reflectors 196
7.11 Reticles 197
7.12 Cements and Liquids 200

Chapter 8. Radiometry and Photometry 205

8.1 205
8.2 The Inverse Square Law; Intensity 205
8.3 Radiance and Lambert's Law 206
8.4 Radiation into a Hemisphere 208
8.5 Irradiance Produced by a Diffuse Source 209
8.6 The Radiometry of Images 211
8.7 Spectral Radiometry 215
8.8 Black Body Radiation 217
8.9 Photometry 222
8.10 Illumination Devices 227

Chapter 9. Basic Optical Devices 235

9.1 Telescopes, Afocal Systems 235
9.2 Field Lenses and Relay Systems 239
9.3 Exit Pupils, The Eye and Resolution 241
9.4 The Simple Microscope 251
9.5 The Compound Microscope 252
9.6 Rangefinders 254
9.7 Radiometer and Detector Optics 258
9.8 Fiber Optics 265
9.9 Anamorphic Systems 270
9.10 Variable Power (Zoom) Systems 273

Chapter 10. Optical Computation 281

10.1 281
10.2 Paraxial Rays 282
10.3 Meridional Rays 283
10.4 General, or Skew, Rays: Spherical Surfaces 288
10.5 General, or Skew, Rays: Aspheric Surfaces 292

10.6 Coddington's Equations 297
10.7 Aberration Determination 302
10.8 Third-Order Aberrations: Surface Contributions 307
10.9 Third-Order Aberrations: Thin Lenses; Stop Shift Equations 315

Chapter 11. Image Evaluation 327

11.1 327
11.2 Optical Path Difference: Focus Shift 327
11.3 Optical Path Difference: Spherical Aberration 329
11.4 Aberration Tolerances 335
11.5 Image Energy Distribution (Geometrical) 340
11.6 Spread Functions 341
11.7 Geometrical Spot Sizes Due to Spherical Aberration 342
11.8 The Modulation Transfer Function 345
11.9 Computation of the Modulation Transfer Function 352
11.10 Special Modulation Transfer Functions: Diffraction-Limited Systems 356
11.11 Radial Energy Distribution 361

Chapter 12. The Design of Optical Systems: General 365

12.1 365
12.2 The Simple Meniscus Camera Lens 367
12.3 The Symmetrical Principle 372
12.4 Achromatic Objectives (Thin Lens Theory) 372
12.5 Achromatic Objectives (Design Forms) 375
12.6 The Cooke Triplet Anastigmat 384
12.7 A Generalized Design Technique 390
12.8 Automatic Design by Electronic Computer 397

Chapter 13. The Design of Optical Systems: Particular 403

13.1 Telescope Systems 403
13.2 Microscope Objectives 410
13.3 Photographic Objectives 416
13.4 Condenser Systems 432
13.5 Reflecting Systems 436
13.6 The Rapid Estimation of Blur Sizes for Simple Optical Systems 452

Chapter 14. Optics in Practice 463

14.1 Optical Manufacture 463
14.2 Optical Specifications and Tolerances 472
14.3 Optical Mounting Techniques 489
14.4 Optical Laboratory Practice 494

Index 515
