Preface xi

A Note on Course Uses xiii

I. THE BASIC FRAMEWORK 1

1. Introduction 3

Magnitude of Capital Investment 4 General Perspective on
Capital Investment 4 Capital Budgeting 7 Cash
Flows 8 Cost of Capital 9 Risk and
Uncertainty 9 Questions 11

2. Objective of Capital Budgeting 12

A Normative Model for Capital Budgeting 13 Basic
Valuation Model 14 Cash Flows and the Public
Sector 16 Questions 16 Problems 17

3. Estimating Project Characteristics 18

Project Types 18 Project Characteristics 19 Initial
Cost 20 Useful Life 23 Cash Flows 26 Taxes
and Depreciation 29 Questions 36 Problems 36

4. Cost of Capital 38

Introduction 38 Cost of Capital Components 39
Overall Cost of Capital 42 Optimal Capital
Structure 44 Interaction of Financing and
Investment 46 Questions 47 Problems 47

II. TRADITIONAL METHODS OF PROJECT EVALUATION 51

5. Traditional Methods that Ignore Time Value of Money 53

Payback and Naive Rate of Return 53 Accounting Method:
Alias Average Return on Average Investment 58
Comprehensive Example 59 Questions 61
Problems 62

**6. Traditional Methods that Recognize Time Value of Money:
Internal Rate of Return 64**

Definition of the IRR 64 A Caution and a Rule for
IRR 67 Payback and IRR Relationship 68
Mathematical Logic for Finding IRR 69 A Digression on
Nominal and Effective Rates 72 Questions 74
Problems 75

**7. Traditional Methods that Recognize Time Value of Money:
The Net Present Value 78**

Unequal Project Size 82 Unequal Project Lives 83
Summary and Conclusion 85 Questions 86
Problems 86

**8. Reinvestment Rate Assumptions of NPV and IRR and
Conflicting Rankings 88**

Reinvestment Rate Assumptions for NPV and IRR 88
Conflicting Rankings and Fisher's Intersection 92
Relationship of IRR and NPV 96 Summary and
Conclusion 97 Questions 97 Problems 98

III. SPECIAL TOPICS AND METHODS 101**9. The MAPI (Terborgh) Method 103**

The Concept of Duality 103 The MAPI
 Framework 105 Application of the MAPI Method 109
 Conclusion 113 Questions 113 Problems 114

10. The Problem of Mixed Cash Flows: I 116

Internal Rate of Return Deficiencies 116 Descartes'
 Rule 117 The Teichroew, Robichek, and Montalbano (TRM)
 Analysis 118 The TRM Algorithm 120 The Unique,
 Real Rate of Return: Caveat Emptor! 126 A New
 Theorem 128 Questions 130 Problems 130

11. The Problem of Mixed Cash Flows: II 133

The Wiar Method 133 Sinking Fund Methods 136 The
 Multiple Investment Sinking Fund Method 143
 Questions 146 Problems 147

**Appendix to Chapter 11: The Problem of Mixed Cash Flows—III:
 A Two-Stage Method of Analysis 148**

Introduction 148 Relationship to Other Methods 149
 The Two-Stage Method 149 Formal Definition and
 Relationship to NPV 154 Conclusion 156 A Brief
 Digression on Uncertainty 156 Questions 157
 Problems 157

12. Leasing 160

Alleged Advantages to Leasing 161 Analysis of
 Leases 161 Summary and Conclusion 169
 Questions 170 Problems 170 Appendix 171

13. Leveraged Leases 174

Methods of Leveraged Lease Analysis 175 Application of the
 Methods 176 Analysis of a Typical Leveraged Lease (Childs
 and Gridley) 179 Conclusion 184

14. Alternative Investment Measures 187

Additional Rate of Return Measures 187 Time-Related
 Measures in Investment Analysis 192 Summary and
 Conclusion 197 Questions 197 Problems 198

15. Project Abandonment Analysis 201

The Robichek-Van Horne Analysis 201 An Alternative
Method: A Parable 204 A Dynamic Programming
Approach 210 Summary and Conclusion 211
Questions 212 Problems 212

16. Multiple Project Capital Budgeting 214

Budget and Other Constraints 214 General Linear
Programming Approach 215 Zero-One Integer
Programming 218 Goal Programming 224 Summary
and Conclusion 227 Questions 228 Problems 228

**IV. CAPITAL BUDGETING UNDER RISK—WITHOUT
DIVERSIFICATION 235**

17. Utility and Risk Aversion 237

The Concept of Utility 238 Calculating Personal
Utility 240 Measures of Risk 246 Risk of
Ruin 250 Summary 251 Questions 252
Problems 252

18. Single Project Analysis Under Risk 255

Payback Method 256 Certainty Equivalents: Method
I 256 Certainty Equivalents: Method II 258 Risk-
Adjusted Discount Rate 259 Computer Simulation 261
Lewellen-Long Criticism 265 Questions 268
Problems 269

**19. Multiple Project Selection Under Risk: Portfolio
Approaches 271**

Introduction 271 Multiple Project Selection 275
Relating to Investor Utility 280 Epilogue 281
Questions 281 Problems 282

**20. Multiple Project Selection Under Risk: Computer Simulation
and Other Approaches 285**

Decision Trees 285 Other Risk Considerations 288
Conclusion 298 Questions 298 Problems 298

**V. CAPITAL BUDGETING UNDER RISK—WITH
DIVERSIFICATION 301****21. The Capital Asset Pricing Model 303**

Assumptions of the CAPM 304 The Efficient Set of
Portfolios 304 The Security Market Line and Beta 307
The CAPM and Valuation 310 The CAPM and Cost of
Capital 310 The CAPM and Capital Budgeting 311
Comparison with Portfolio Approaches 312 Some Criticisms
of the CAPM 313 Conclusion 314
Questions 314 Problems 315

**VI. CURRENT AND FUTURE CHALLENGES IN CAPITAL
BUDGETING 319****22. Capital Investment in the 1980s 321**

Introduction 321 Entering the 1980s 321
Inflation 324 Productivity 330 Government
Regulations 332 Contingency Planning 341
Conclusion 343

**VIII. APPENDIX: FINANCIAL MATHEMATICS TABLES AND
FORMULAS 345**

Index 391
