## **Community Ecology**

# Processes, Models, and Applications

EDITED BY

#### Herman A. Verhoef

VU University, Amsterdam, Department of Ecological Science, the Netherlands

#### Peter J. Morin

Rutgers University, Department of Ecology, Evolution & Natural Resources, USA

### **Contents**

Preface

List of Contributors			
Introduction	1		
Part I Shape and Structure			
1 The topology of ecological interaction networks: the state of the art Owen L. Petchey, Peter J. Morin and Han Olff	7		
<ul> <li>1.1 Introduction <ul> <li>1.1.1 What do we mean by the 'topology' of ecological networks?</li> <li>1.1.2 Different types of ecological networks</li> <li>1.1.3 Three general questions</li> </ul> </li> <li>1.2 Competitive networks <ul> <li>1.2.1 Structural regularities</li> <li>1.2.2 Mechanisms</li> <li>1.2.3 Unresolved issues</li> </ul> </li> <li>1.3 Mutualistic networks <ul> <li>1.3.1 Structural regularities</li> <li>1.3.2 Mechanisms</li> <li>1.3.3 Unresolved issues</li> </ul> </li> <li>1.4 Food webs <ul> <li>1.4.1 Structural regularities</li> <li>1.4.2 Mechanisms</li> <li>1.4.3 Unresolved issues</li> </ul> </li> <li>1.4.3 Unresolved issues</li> </ul>	7 7 9 11 11 13 15 15 15 16 16 17 17		
Part II Dynamics	23		
2 Trophic dynamics of communities Herman A. Verhoef and Han Olff	25		
<ul> <li>2.1 What types of dynamics can be distinguished?</li> <li>2.1.1 Stable equilibria</li> <li>2.1.2 Alternate equilibria</li> <li>2.1.3 Stable limit cycles</li> <li>2.1.4 Chaotic dynamics</li> <li>2.2 Dynamics of food web modules</li> <li>2.3 Internal dynamics in food web modules or simple webs</li> <li>2.4 Dynamics enforced by external conditions</li> </ul>	25 25 26 26 26 26 29 32

#### vi CONTENTS

	<ul><li>2.5 Equilibrium biomass at different productivities</li><li>2.6 Dynamics of complex interactions</li><li>2.7 Conclusions</li></ul>	33 34 34
3	Modelling the dynamics of complex food webs Ulrich Brose and Jennifer A. Dunne	37
	3.1 Introduction	37
	3.2 Simple trophic interaction modules and population dynamics	37
	3.3 Scaling up keystone effects in complex food webs	39
	3.4 Diversity/complexity-stability relationships	40
	3.5 Stability of complex food webs: community matrices	40
	3.6 Stability of complex food webs: bioenergetic dynamics	41
	3.7 Stability of complex food webs: allometric bioenergetic dynamics	42 44
	3.8 Future directions	44
1	Community assembly dynamics in space  Tadashi Fukami	45
		45
	4.1 Introduction	45 46
	<ul><li>4.2 Determinism and historical contingency in community assembly</li><li>4.3 Community assembly and spatial scale</li></ul>	48
	4.3.1 Patch size	48
	4.3.2 Patch isolation	49
	4.3.3 Scale of environmental heterogeneity	51
	4.3.4 Synthesis	52
	4.4 Community assembly and species traits	52
	4.5 Conclusions and prospects	53
Pa	art III Space and Time	55
5	Increasing spatio-temporal scales: metacommunity ecology	57
	Jonathan M. Chase and Janne Bengtsson	
	5.1 Introduction	57
	5.2 The varied theoretical perspectives on metacommunities	58
	5.2.1 Neutral	60
	5.2.2 Patch dynamics	60
	5.2.3 Species sorting	60
	5.2.4 Mass effects	60
	5.3 Metacommunity theory: resolving MacArthur's paradox	61
	5.4 As easy as $\alpha$ , $\beta$ , $\gamma$ : the importance of scale	61 63
	<ul><li>5.5 Species-area relationships and metacommunity structure</li><li>5.6 Effects of dispersal rates on local communities</li></ul>	64
	5.7 Local–regional richness relationships	65
	5.8 A synthesis of metacommunity models	65
	5.9 Adding food web interactions into the equation	66
	5.10 Cross-ecosystem boundaries	66
	5.11 Conclusions	68

8.3.2.3 Pelagic systems	103
8.4 Biodiversity and stability of marine ecosystems	104
8.4.1 Conceptual background	104
8.4.2 Evidence linking diversity and stability in marine systems	105
8.4.2.1 Comparisons through time	105
8.4.2.2 Comparisons across space	107
8.4.2.3 Mechanisms	108
8.5 Interaction strengths and dynamic stability in marine food webs	109
8.5.1 Conceptual background	109
8.5.2 Empirical evidence	110
8.6 Alternate stable states and regime shifts in marine ecosystems	110
8.6.1 Conceptual background	110
8.6.2 Empirical evidence for regime shifts in marine ecosystems	112
8.6.2.1 Mechanisms	112
8.7 Emerging questions in emerging marine ecosystems	113
Applied (meta)community ecology: diversity and ecosystem services at the intersection	
of local and regional processes	115
Janne Bengtsson	
9.1 Introduction	115
9.2 A theoretical background	116
9.2.1 A simplified historical narrative	116
9.2.2 Implications of metacommunity theory	118
9.2.3 Metacommunities in human-dominated landscapes: effects of habitat loss	
and fragmentation	121
9.3 A selection of empirical studies	123
9.3.1 Applied questions allow experimental studies on management scales	123
9.3.2 Biodiversity in human-dominated landscapes: local or landscape management?	124
9.3.3 Local and regional effects on ecosystem services	127
9.3.4 What have we learned in the context of metacommunity ecology?	129
10 Community ecology and management of salt marshes	131
Jan P. Bakker, Dries P.J. Kuijper and Julia Stahl	
10.1 Introduction	131
10.2 Natural salt marsh: the back-barrier model including a productivity gradient	132
10.3 Effects of plants on herbivores (bottom-up control)	133
10.4 Effects of intermediate-sized herbivores on plants (top-down control)	134
10.4.1 Experimental evidence	134
10.4.2 Effects of herbivores at high marsh	135
10.4.3 Low marsh	136
10.5 Large-scale effects of an intermediate herbivore on salt-marsh vegetation	137
10.6 Interaction of herbivory and competition	137
10.7 Competition and facilitation between herbivores	139
10.7.1 Short-term competition and facilitation between hares and geese	139
10.7.2 Long-term facilitation between herbivores	140
10.8 Exclusion of large herbivores: effects on plants	141
10.8.1 Natural marshes	141

10.9 Exclusion of large herbivores: effects on invertebrates  10.10 Exclusion of large herbivores: effects on birds  10.10.1 Migrating birds  10.10.1 Migrating birds  10.10.1 Ageing of salt marshes and implications for management  Part V Future Directions  11 Evolutionary processes in community ecology    Jacintha Ellers  11.1 Introduction  11.1.1 Bridging the gap between evolutionary biology and community ecology  11.2 Evolutionary biology: mechanisms for genetic and phenotypic change  11.2.1 Benefits and maintenance of genetic diversity at the population level  11.2.2 The source and nature of genetic variation  11.3.3 The relationship between genetic and phenotypic diversity  11.3 Proof of principle: community properties result from genetic identity and selection at the level of individual organisms  11.4 Effects of genetic and phenotypic diversity on community composition and species dive 11.4.1 Effects of genetic diversity on community functioning  11.4.2 Diversity begets diversity?  11.4.3 Phenotypic diversity is also important for community diversity and composition 11.4.4 Phenotypic plasticity and invasive success  11.5 Effect of community composition on the genetic and phenotypic diversity of single spec 11.6 Future directions  12 Emergence of complex food web structure in community evolution models Nicolas Loeuille and Michel Loreau  12.1 A difficult choice between dynamics and complexity?  12.2 Community evolution models: mechanisms, predictions and possible tests 12.2.1 Models with a limited number of traits  12.2.2 Evolutionary emergence of body-size structured food webs 12.2.3.1 Comparison with other community evolution models 12.2.3.2 Comparison with binary qualitative models 12.2.3.3 Testing predictions  12.3 Community evolution models and community evolution models 12.3.3 Testing predictions  12.3 Community evolution models and the diversity-stability debate 12.3.2 Effects of perturbations on natural communities 12.3.2 Effects of perturbations on community evolution models 12.4.1 Possible extens				
10.10.1 Migrating birds 10.10.1 Migrating birds 10.10.2 Breeding birds 10.10.1 Ageing of salt marshes and implications for management  Part V Future Directions  11 Evolutionary processes in community ecology  Jacintha Ellers  11.1 Introduction 11.1.1 Bridging the gap between evolutionary biology and community ecology 11.2 Evolutionary biology: mechanisms for genetic and phenotypic change 11.2.1 Benefits and maintenance of genetic diversity at the population level 11.2.2 The source and nature of genetic variation 11.2.3 The relationship between genetic and phenotypic diversity 11.3 Proof of principle: community properties result from genetic identity and selection at the level of individual organisms 11.4 Effects of genetic diversity on community composition and species diversity. 11.4.1 Effects of genetic diversity on community functioning 11.4.2 Diversity begets diversity? 11.4.3 Phenotypic plasticity and invasive success 11.5 Effect of community composition on the genetic and phenotypic diversity of single spec 11.6 Future directions  12. Emergence of complex food web structure in community evolution models Nicolas Loeuille and Michel Loreau 12.1 A difficult choice between dynamics and complexity? 12.2. Community evolution models: mechanisms, predictions and possible tests 12.2.1 One or many traits? 12.2.1.1 Models in which species are defined by many traits 12.2.2.2 Evolutionary emergence of body-size structured food webs 12.2.3.3 Community evolution models and the diversity-stability debate 12.2.3.1 Comparison with other community evolution models 12.3.2 Comparison with binary qualitative models 12.3.3 Testing predictions 12.3 Community evolution models and the diversity-stability debate 12.3.3 Community evolution models and the diversity-stability debate 12.3.3 Models with identified traits: other possible applications 12.4 Conclusions, and possible extensions of community evolution models 12.4.1 Possible extensions of community evolution models			10.8.2 Artificial salt marshes	142
10.10.1 Migrating birds 10.10.2 Breeding birds 10.11 Ageing of salt marshes and implications for management  Part V Future Directions  11 Evolutionary processes in community ecology  Jacintha Ellers 11.1 Introduction 11.1.1 Bridging the gap between evolutionary biology and community ecology 11.2 Evolutionary biology: mechanisms for genetic and phenotypic change 11.2.1 Benefits and maintenance of genetic diversity at the population level 11.2.2 The source and nature of genetic variation 11.2.3 The relationship between genetic and phenotypic diversity 11.3 Proof of principle: community properties result from genetic identity and selection at the level of individual organisms 11.4 Effects of genetic and phenotypic diversity on community composition and species diversity end. 2 Diversity begets diversity? 11.4.3 Phenotypic diversity is also important for community diversity and composition 11.4.4 Phenotypic diversity is also important for community diversity and composition 11.4.4 Phenotypic plasticity and invasive success 11.5 Effect of community composition on the genetic and phenotypic diversity of single spec 11.6 Future directions 12 Emergence of complex food web structure in community evolution models Nicolas Loeuille and Michel Loreau 12.1 A difficult choice between dynamics and complexity? 12.2 Community evolution models: mechanisms, predictions and possible tests 12.2.1 One or many traits? 12.2.1.1 Models in which species are defined by many traits 12.2.2.2 Evolutionary emergence of body-size structured food webs 12.2.3.1 Comparison with other community evolution models 12.2.3.2 Comparison with other community evolution models 12.2.3.3 Testing predictions 12.3 Community evolution models and the diversity-stability debate 12.3.3 Community evolution models and the diversity-stability debate 12.3.3 Community evolution models and the diversity-stability debate 12.3.3 Community evolution models and community evolution models 12.4.1 Possible extensions of community evolution models		10.9	Exclusion of large herbivores: effects on invertebrates	143
10.10.2 Breeding birds 10.11 Ageing of salt marshes and implications for management  Part V Future Directions  11 Evolutionary processes in community ecology  Jacintha Ellers  11.1 Introduction 11.1.1 Bridging the gap between evolutionary biology and community ecology 11.2 Evolutionary biology: mechanisms for genetic and phenotypic change 11.2.1 Benefits and maintenance of genetic diversity at the population level 11.2.2 The source and nature of genetic variation 11.2.3 The relationship between genetic and phenotypic diversity 11.3 Proof of principle: community properties result from genetic identity and selection at the level of individual organisms 11.4 Effects of genetic and phenotypic diversity on community composition and species dive 11.4.1 Effects of genetic diversity on community functioning 11.4.2 Diversity begets diversity; 11.4.3 Phenotypic diversity is also important for community diversity and composition 11.4.4 Phenotypic plasticity and invasive success 11.5 Effect of community composition on the genetic and phenotypic diversity of single spec 11.6 Future directions  12 Emergence of complex food web structure in community evolution models Nicolas Loeuille and Michel Loreau 12.1 A difficult choice between dynamics and complexity? 12.2.1.1 Models in which species are defined by many traits 12.2.1 One or many traits? 12.2.1.2 Community evolution models: mechanisms, predictions and possible tests 12.2.3 Advantages of simple community evolution models 12.2.3.1 Comparison with other community evolution models 12.2.3.2 Comparison with binary qualitative models 12.2.3.3 Testing predictions 12.3 Community evolution models and community evolution models 12.3.3 Models with identified traits: other possible applications 12.4 Conclusions, and possible extensions of community evolution models 12.4.1 Possible extensions of community evolution models		10.10	Exclusion of large herbivores: effects on birds	144
Part V Future Directions  11 Evolutionary processes in community ecology    Jacintha Ellers  11.1 Introduction 11.1.1 Bridging the gap between evolutionary biology and community ecology 11.2 Evolutionary biology: mechanisms for genetic and phenotypic change 11.2.1 Benefits and maintenance of genetic diversity at the population level 11.2.2 The source and nature of genetic and phenotypic diversity 11.3 Proof of principle: community properties result from genetic identity and selection at the level of individual organisms  11.4 Effects of genetic and phenotypic diversity on community composition and species dive 11.4.1 Effects of genetic diversity on community functioning 11.4.2 Diversity begets diversity? 11.4.3 Phenotypic diversity is also important for community diversity and composition 11.4.4 Phenotypic plasticity and invasive success 11.5 Effect of community composition on the genetic and phenotypic diversity of single spec 11.6 Future directions  12 Emergence of complex food web structure in community evolution models Nicolas Loeuille and Michel Loreau  12.1 A difficult choice between dynamics and complexity? 12.2 Community evolution models: mechanisms, predictions and possible tests 12.2.1 One or many traits? 12.2.1.2 Models in which species are defined by many traits 12.2.2.2 Evolutionary emergence of body-size structured food webs 12.2.3.1 Comparison with other community evolution models 12.2.3.2 Comparison with other community evolution models 12.2.3.3 Testing predictions 12.3.3 Community evolution models and the diversity-stability debate 12.3.1 Community evolution models and the diversity-stability debate 12.3.3 Community evolution models of community evolution models 12.4.1 Possible extensions of community evolution models			10.10.1 Migrating birds	144

#### x CONTENTS

13	Mutualisms and community organization	179
	David Kothamasi, E. Toby Kiers and Marcel G.A. van der Heijden	
	13.1 Introduction	179
	13.2 Conflicts, cooperation and evolution of mutualisms	180
	13.2.1 Mutualism can also develop without evolution	183
	13.3 Mutualisms in community organization	183
	13.3.1 Plant–pollinator interactions	183
	13.3.2 Plant-protector mutualism	184
	13.3.3 Plant nutrition symbiosis	185
	13.3.3.1 Legume-rhizobia symbioses	185
	13.3.3.2 Mycorrhizal symbioses	188
	13.4 Conclusions	191
14	Emerging frontiers of community ecology	193
	Peter J. Morin	
	14.1 Introduction	193
	14.1.1 Spatial ecology	193
	14.1.2 Complex dynamics	193
	14.1.3 Size-dependent interactions	193
	14.1.4 Interactions between topology and dynamics	193
	14.1.5 Evolutionary community dynamics	194
	14.1.6 Applied community ecology	195
	14.2 Future directions	196
	14.2.1 Biotic invasions	196
	14.2.2 Interaction networks beyond food webs	199
