Preface

1	Introduction	1
1.1	Background	1
1.1.1	An introductory example	1
1.1.2	Conditional autoregressions	3
1.2	The scope of this monograph	5
1.2.1	Numerical methods for sparse matrices	6
1.2.2	Statistical inference in hierarchical models	8
1.3	Applications of GMRFs	10
2	Theory of Gaussian Markov random fields	15
2.1	Preliminaries	15
2.1.1	Matrices and vectors	15
2.1.2	Lattice and torus	16
2.1.3	General notation and abbreviations	17
2.1.4	Conditional independence	17
2.1.5	Undirected graphs	18
2.1.6	Symmetric positive-definite matrices	19
2.1.7	The normal distribution	20
2.2	Definition and basic properties of GMRFs	21
2.2.1	Definition	21
2.2.2	Markov properties of GMRFs	24
2.2.3	Conditional properties of GMRFs	26
2.2.4	Specification through full conditionals	28
2.2.5	Multivariate GMRFs [★]	30
2.3	Simulation from a GMRF	31
2.3.1	Some basic numerical linear algebra	32
2.3.2	Unconditional simulation of a GMRF	33
2.3.3	Conditional simulation of a GMRF	36
2.4	Numerical methods for sparse matrices	40
2.4.1	Factorizing a sparse matrix	41
2.4.2	Bandwidth reduction	45
2.4.3	Nested dissection	48

Contents

2.5	A numerical case study of typical GMRFs	52
2.5.1	GMRF models in time	53
2.5.2	Spatial GMRF models	54
2.5.3	Spatiotemporal GMRF models	56
2.6	Stationary GMRFs*	57
2.6.1	Circulant matrices	57
2.6.2	Block-circulant matrices	62
2.6.3	GMRFs with circulant precision matrices	65
2.6.4	Toeplitz matrices and their approximations	67
2.6.5	Stationary GMRFs on infinite lattices	72
2.7	Parameterization of GMRFs*	75
2.7.1	The valid parameter space	76
2.7.2	Diagonal dominance	81
2.8	Bibliographic notes	82
3	Intrinsic Gaussian Markov random fields	85
3.1	Preliminaries	85
3.1.1	Some additional definitions	85
3.1.2	Forward differences	87
3.1.3	Polynomials	87
3.2	GMRFs under linear constraints	89
3.3	IGMRFs of first order	93
3.3.1	IGMRFs of first order on the line	94
3.3.2	IGMRFs of first order on lattices	101
3.4	IGMRFs of higher order	108
3.4.1	IGMRFs of higher order on the line	109
3.4.2	IGMRFs of higher order on regular lattices*	114
3.4.3	Nonpolynomial IGMRFs of higher order	120
3.5	Continuous-time random walks*	123
3.6	Bibliographic notes	130
4	Case studies in hierarchical modeling	133
4.1	MCMC for hierarchical GMRF models	135
4.1.1	A brief introduction to MCMC	135
4.1.2	Blocking strategies	137
4.2	Normal response models	144
4.2.1	Example: Drivers data	144
4.2.2	Example: Munich rental guide	150
4.3	Auxiliary variable models	153
4.3.1	Scale mixtures of normals	154
4.3.2	Hierarchical- <i>t</i> formulations	156
4.3.3	Binary regression models	157
4.3.4	Example: Tokyo rainfall data	160

Contents

4.3.5 Example: Mapping cancer incidence	164
4.4 Nonnormal response models	167
4.4.1 The GMRF approximation	167
4.4.2 Example: Joint disease mapping	172
4.5 Bibliographic notes	180
5 Approximation techniques	183
5.1 GMRFs as approximations to Gaussian fields	183
5.1.1 Gaussian fields	184
5.1.2 Fitting GMRFs to Gaussian fields	186
5.1.3 Results	190
5.1.4 Regular lattices and boundary conditions	195
5.1.5 Example: Swiss rainfall data	199
5.2 Approximating hidden GMRFs	203
5.2.1 Constructing non-Gaussian approximations	204
5.2.2 Example: A stochastic volatility model	209
5.2.3 Example: Reanalyzing Tokyo rainfall data	211
5.3 Bibliographic notes	215
Appendices	217
A Common distributions	219
B The library GMRFLib	221
B.1 The graph object and the function Qfunc	221
B.2 Sampling from a GMRF	225
B.3 Implementing block-updating algorithms for hierarchical GMRF models	231
References	237
Author index	255
Subject index	259
