New Mathematical Advances in Economie Dynamics

Edited by

DAVID F. BATTEN, CSIRO, Australia and IIASA, Austria

and

PAUL F. LESSE, CSIRO, Australia

List List Prefe	of Tables of Figures ace
1.	Introduction1 David F. Batten
PARÍ	I. STABILIZATION AND CONTROL
2.	Feedback and Adaptive Control for Uncertain Dynamical Systems
3.	Modelling and Optimal Control of Random Walk Processes in Economics
4.	Stabilization and Optimal Management in the Housing Industry
5.	Modelling the Supply-Demand Dynamics of a Slowly Renewable Resource
PART	II. DIFFERENTIAL GAMES
6.	A Competitive Differential Game of Harvesting Uncertain Resources
7.	Identification of Stock and System Parameters in a Pareto Harvesting Game of Two Players
PART	III. DYNAMIC MACROECONOMIC MODELS
8.	The Solution Procedure for the ORANI Model Explained by a Simple Example

.

9.	Analysis of the Effects of Time Lags and Nonlinearities in a Macroeconomic Model Incorporating the Government Budget Constraint131 Carl Chiarella	
PART	IV. TIME SERIES ANALYSIS AND ECONOMETRICS	
10.	Iterative Fitting of a Time Series Model157 Bruce D. Craven	
11.	The State Space Software SARAS Forecasts Better than the Box-Jenkins Method165 Keshav P. Vishwakarma	
12.	Electricity Demand Modelling	
Conti Autho Subje	ributing Authors
