(Editors)

The Economics of Networks

Interaction and Behaviours

With 70 Figures
and 17 Tables

Springer

List of Contributions

<i>Introduction</i> By Gisèle Umbhauer	1
---	---

Part I : Interaction and Macro-Structure : an Overview

<i>Economies with Interacting Agents</i> By Alan P. Kirman (GREQUAM).....	17
--	----

<i>Spatial Interactions in Dynamic Decentralised Economies : a Review</i> By Giorgio Fagiolo (EUI).....	53
--	----

<i>Network, Interactions between Economic Agents and Irreversibilities : the Case of the Choice among Competing Technologies</i> By Patrick Cohendet (BETA).....	93
---	----

<i>Rationality and Heterogeneity in Stochastic Aggregation Models</i> By Jean-Michel Dalle (IEPE)	123
--	-----

Part II : Local Interaction, Learning and Diversity

<i>Networks Competition under Local Interaction and Behavioral Learning</i> By Nicolas Jonard (BETA), Patrick Llerena (BETA) and Babak Mehmanpazir (BETA).....	149
---	-----

<i>Can Neighborhood Protect Diversity</i> By Gisèle Umbhauer (BETA)	167
--	-----

<i>Interaction of Local Interactions: Localized Learning and Network Externalities</i> By Nicolas Jonard (BETA) and Murat Yıldızoğlu(BETA)	189
---	-----

<i>Evolution of Cooperation with Local Interactions and Imitation</i> By Vanessa Oltra (BETA) and Eric Schenk (BETA).....	205
<i>On the Frontier : Structural Effects in a Diffusion Model based on Influence Matrices</i> By Alexandre Steyer (HEC) and Jean-Benoît Zimmermann (GREQUAM)	223
 Part III : Behaviors, Externalities and the Emergence of Networks	
<i>Networks, Specialization and Trust</i> By Ehud Zuscovitch (BETA).....	243
<i>Network Externalities, Cost Functions and Standardization</i> By Hubert Stahn (BETA).....	265
<i>The Emergence of Network Organizations in Processes of Technological Choice: a Viability Approach</i> By Jean-Pierre Aubin (IIASA) and Dominique Foray (IRIS-TS).....	283
<i>Are more Informed Agents able to shatter Information Cascades in the Lab?</i> By Marc Willinger (BETA) and Anthony Ziegelmeyer (BETA).....	291
<i>Information Externalities and Learning with Sequential Interactions</i> By Kene Bounmy (BETA), Jean-Christophe Vergnaud (BETA), Marc Willinger (BETA) and Anthony Ziegelmeyer (BETA).....	307
<i>The Evolution of Imitation</i> By André Orléan (CREA).....	325

Contents

Foreword by the Editors	i
List of contributions	iii
Introduction	1
The economics of networks	1
Interaction structure: the role of asymmetries	2
Irreversibility, diversity and stability	6
Outline of the book	9
I Interaction and Macro-Structure : an Overview	15
1 Economies with Interacting Agents	17
1.1 Introduction	17
1.2 Global interaction - static models with random matching	20
1.3 Static models with global stochastic interdependence	22
1.4 Global interaction - dynamic stochastic evolution	24
1.5 Technological choice	27
1.6 Evolution in games	30
1.7 Local interaction: static models	34
1.8 The neighbourhood structure of an economy	35
1.9 Local interaction: dynamic models.	38
1.10 Evolving networks	42
1.11 Conclusion	44
1.12 References	45
2 Spatial Interactions in Dynamic Decentralised Economies : a Review	53
2.1 Introduction	53
2.2 A basic model	56
2.2.1 Direct interactions in dynamic economies	56
2.2.2 Spatial economies and local interactions	57
2.3 Interaction structures with low flexibility	59
2.3.1 Markov random fields on integer lattices	60
2.3.2 Repeated games on graphs and lattices	64
2.3.3 Cellular automata	68
2.3.4 'Self-organised criticality' and asymmetric interactions	70

2.4	Interaction structures with high flexibility	72
2.4.1	Percolation theory	72
2.4.2	Stochastic graphs	73
2.4.3	Artificial economies	75
2.5	Sidde models' drawbacks and 'open ended' environments . .	77
2.6	Conclusions	81
2.7	References	82
3	Network, Interactions between Economic Agents and Irreversibilities : the Case of the Choice among Competing Technologies	93
3.1	Introduction	93
3.2	Irreversibility on a network of non "localised" agents	95
3.2.1	General characteristics of adoption static models . .	95
3.2.2	General characteristics of adoption dynamic models	96
3.2.3	The basic model based on the polya urn scheme . .	97
3.2.4	Extensions of the basic model	98
3.2.5	Discussions on the behaviors of potential adopters in a network	99
3.3	Irreversibility on a network of "localized" agents	104
3.3.1	The model of percolation	105
3.3.2	Dynamic models of adoption with local influences . .	109
3.4	Conclusion	113
3.5	References	118
4	Rationality and Heterogeneity in Stochastic Aggregation Models	123
4.1	Introduction	124
4.2	The non-neutrality of interactions in economic analysis . . .	127
4.3	The question of rationality	130
4.4	From the question of rationality to the question of heterogeneity	134
4.5	Modeling with statistical behavioral functions	138
4.6	Conclusion	141
4.7	References	142
II	Local Interaction, Learning and Diversity	147
5	Networks Competition under Local Interaction and Behavioral Learning	149
5.1	Introduction	149
5.2	Variety, standardization and local interaction	151
5.2.1	The interaction structure and the game	152
5.2.2	Learning and adapting	154

5.2.3	The learning algorithm	154
5.3	Results: local interaction and coordination	157
5.3.1	Methodology	157
5.3.2	Exploration, path-dependency and the emergence of order	158
5.3.3	Learning, standardization and diversity	160
5.3.4	The pace of convergence and the emergence of spatial structure	161
5.4	Conclusion and implications	163
5.5	References	165
6	Can Neighborhood Protect Diversity	167
6.1	Introduction	167
6.2	Pure coordination games and evolutionary processes	168
6.3	Global approach	172
6.4	Local approach: learning process and diversity	177
6.5	Local approach: mutations and diversity	180
6.6	Conclusion	186
6.7	References	187
7	Interaction of Local Interactions: Localized Learning and Network Externalities	189
7.1	Introduction	189
7.2	The model	191
7.2.1	Firms' behavior	191
7.2.2	Firm and technology spaces and neighborhoods	192
7.3	Results: localized interactions and diversity	194
7.3.1	Set-up and methodology	194
7.3.2	Global effects of local interactions	195
7.3.3	Sorting out individual effects	197
7.3.4	Comparison of $(G, 1)$ with $(3, 0)$	198
7.3.5	Long term spatial structures	200
7.4	Conclusion	202
7.5	References	203
8	Evolution of Cooperation with Local Interactions and Imitation	205
8.1	Introduction	205
8.2	The prisoner's dilemma game with local interactions and imitation	206
8.2.1	Basic assumptions of the model	206
8.2.2	The model	208
8.3	Stability of cooperation with conditional imitation	211
8.3.1	Parametrization of the model	211
8.3.2	Aggregate results of the simulations	212

8.3.3	Spatial configurations	214
8.4	Diffusion and stability of cooperation with pure imitation	217
8.4.1	Aggregate results of the simulations	217
8.4.2	Spatial configurations	219
8.5	Conclusion	221
8.6	References	221
9	On the Frontier : Structural Effects in a Diffusion Model based on Influence Matrixes	223
9.1	Introduction	223
9.2	The foundations of the basic model	224
9.3	Two kinds of structural effects	227
9.3.1	The one standard model	227
9.3.2	The two standards model	229
9.4	Numerical testing	234
9.4.1	Entropy and phase diagram	234
9.4.2	The homogeneous case	235
9.4.3	Rules for networks generation	236
9.4.4	Structural effects	236
9.5	Conclusion	237
9.6	References	238
III	Behaviors, Externalities and the Emergence of Networks	241
10	Networks, Specialization and Trust	243
10.1	Information intensity and economic viability	243
10.2	Surplus creation mechanisms	248
10.3	Capital-intensity and mass production	250
10.4	Information-intensive production and specialization	252
10.5	Network incentives, agent interaction and technological learning	255
10.5.1	Incentives and compatibility	255
10.5.2	Priority, reciprocity, credit and trust	256
10.5.3	Sustainable differentiation revisited: risk sharing and specialization	257
10.5.4	Learning and appropriation	259
10.6	Conclusion	261
10.7	References	262
11	Network Externalities, Cost Functions and Standardization	265
11.1	Introduction	265
11.2	The model	267

11.3 Behaviors and equilibrium	267
11.4 The existence and uniqueness issues	269
11.5 Compatibility and total output : a counter-example	273
11.6 Conclusion	280
11.7 References	281
12 The Emergence of Network Organizations in Processes of Technological Choice: a Viability Approach	283
12.1 Introduction	283
12.2 The Network constraints	284
12.3 Influence matrices describing network organization	285
12.4 Organizational niches	286
12.5 How network organization evolves	286
12.6 Minimizing a static complexity index	287
12.7 Minimizing a dynamic complexity index	288
12.8 The lock-in property	288
12.9 Conclusion	288
12.10References	289
13 Are more Informed Agents able to shatter Information Cascades in the Lab ?	291
13.1 Introduction	291
13.2 The Bikhchandani, Hirshleifer and Welch specific model (BHW)	293
13.3 The Anderson and Holt experiment	296
13.4 Experimental design and theoretical predictions	298
13.5 Results	301
13.6 Conclusion	304
13.7 References	305
14 Information Externalities and Learning with Sequential Interactions	307
14.1 Introduction	308
14.2 The model	309
14.3 Equilibrium solutions	311
14.3.1 Endogenous timing with two technologies	311
14.3.2 Endogenous timing with one technology	314
14.3.3 Exogenous timing (with two technologies)	316
14.4 Efficiency of imitation	317
14.4.1 Average error probability	318
14.4.2 Expected social surplus	321
14.5 Conclusion	323
14.6 References	324
15 The Evolution of Imitation	325
15.1 Introduction	325

15.2 The basic model	327
15.3 Imitation as an evolutionary dynamics	332
15.4 Conclusion	337
15.5 References	339
