Preface xxix

I Concepts, Models, and Processes in Econometrics 1

1 Introduction 3
- 1.1 Empirical econometric modelling 3
- 1.2 The problems of econometrics 5
- 1.3 The aims of this book 6
- 1.4 Constructive and destructive approaches 7
- 1.5 A brief discourse on scientific method 9
- 1.6 Theories, instruments, and evidence 11
- 1.7 Economic analysis and statistical theory 13
- 1.8 Four levels of knowledge 16
  - 1.8.1 Probability theory 16
  - 1.8.2 Estimation theory 16
  - 1.8.3 Modelling theory 17
  - 1.8.4 Forecasting theory 17
  - 1.8.5 The origins of the methodological crisis 18
- 1.9 Some economic time series 19
- 1.10 A first data-generation process 21
- 1.11 Empirical models as derived entities 27
- 1.12 Exercises 29

2 Econometric Concepts 31
- 2.1 Parameter 31
- 2.2 Constancy 32
- 2.3 Structure 33
- 2.4 Distributional shape 34
- 2.5 Identification and observational equivalence 36
- 2.6 Interdependence 37
- 2.7 Stochastic process 38

2.8	Conditioning	39
2.9	White noise	39
2.10	Autocorrelation	40
2.11	Stationarity	42
2.12	Integratedness	43
2.13	Cointegration	44
2.14	Trend	44
2.15	Heteroscedasticity	45
2.16	Dimensionality	46
2.17	Aggregation	46
2.18	Marginalization	48
2.19	A general formulation	49
2.20	A static solved example	51
2.21	Models, mechanisms, and DGPs	55
2.22	Factorizations	56
2.23	Innovation processes	58
2.24	Empirical models	60
2.25	White noise and innovations	63
2.26	Autocorrelated shocks	64
2.27	Sequential factorization	65
2.28	Model design	67
2.29	A dynamic solved example	68
2.30	Exercises	72

3	**Econometric Tools and Techniques**	**75**
3.1	Review	75
3.2	Estimating unknown parameters	76
3.2.1	An empirical example	76
3.2.2	Recursive estimation	78
3.2.3	A solved recursive example	82
3.3	Methods for evaluating models	85
3.4	Statistical theory	86
3.5	Asymptotic distribution theory	87
3.6	Monte Carlo	87
3.6.1	Distribution sampling	88
3.6.2	Antithetic variates	90
3.6.3	Control variables	93
3.6.4	Response surfaces	94
3.6.5	Invariance	95
3.6.6	Recursive Monte Carlo	97
3.7	Ergodicity	98
3.8	Non-stationarity*	100
3.9	A solved example*	104
3.10	Vector Brownian motion*	111
3.11	A Monte Carlo study	115

3.12 Exercises 118

4 Dynamics and Interdependence 122
4.1 Nonsense regressions 122
4.2 Analysing nonsense regressions* 130
4.3 Spurious detrending* 133
4.4 First-order autoregressive dynamics 134
4.5 Reduction and dynamics 138
4.6 Interdependence 140
4.7 Cointegration 143
4.8 Bivariate dynamics 143
4.9 A solved example 145
4.10 Exercises 150

5 Exogeneity and Causality 156
5.1 What are 'exogenous variables'? 156
5.2 Two counter-examples 157
5.2.1 An expectations counter-example 158
5.2.2 A fixed-regressor counter-example 161
5.3 Weak exogeneity 162
5.4 A cobweb model 164
5.5 The counter-examples reconsidered 166
5.6 An ambiguity in strict exogeneity 167
5.7 Can the model mis-specification be detected? 168
5.7.1 ζ_t is not an innovation relative to $\boldsymbol{X}_{t-1}$ 169
5.7.2 ζ_t is white noise 169
5.8 Strong exogeneity 170
5.9 Super exogeneity 172
5.10 An illustration of super exogeneity 173
5.11 Causality 175
5.11.1 Granger non-causality 175
5.11.2 Invariance under interventions 176
5.12 Two solved examples 177
5.13 Weak exogeneity and unit roots* 181
5.13.1 A bivariate cointegrated system 182
5.13.2 Six cases of interest 183
5.13.3 Limiting distributions 184
5.13.4 Inference 187
5.13.5 A Monte Carlo study 188
5.14 Exercises 191

6 Interpreting Linear Models 195
6.1 Four interpretations of $y_t = \beta' z_t + \epsilon_t$ 195
6.1.1 Regression 196
6.1.2 Linear least-squares approximation 197
6.1.3 Contingent plan 198
6.1.4 Behavioural model 200
6.2 Expectations formation 202
6.2.1 Rational expectations 202
6.2.2 Unbiased expectations 204
6.2.3 Data-based expectations 205
6.3 Autocorrelation corrections 207
6.4 A simple dynamic model: AD(1,1) 211
6.5 Lags and their measurement 212
6.5.1 Static solutions 212
6.5.2 Lag distributions 214
6.5.3 Interpreting empirical lag distributions 217
6.6 A Monte Carlo study of the AD(1,1) model 219
6.6.1 Coefficient biases 220
6.6.2 Coefficient standard errors 221
6.6.3 Parameter constancy tests 223
6.7 An empirical illustration 223
6.8 A solved example 227
6.9 Exercises 229

7 A Typology of Linear Dynamic Equations 231
7.1 Introduction 231
7.2 Static regression 233
7.3 Autoregression 241
7.4 Differenced-data model 247
7.5 Leading indicator 252
7.6 Partial adjustment 256
7.7 Common factor 266
7.8 Finite distributed lags 273
7.9 Dead-start models 283
7.10 Equilibrium correction 286
7.10.1 Cointegration 288
7.10.2 Servo-mechanistic control 290
7.10.3 Empirical success of ECMs 291
7.11 Solved examples 294
7.11.1 Partial adjustment and equilibrium correction 294
7.11.2 Testing cointegration* 297
7.11.3 Cointegration representations 303
7.12 Summary and conclusion 304
7.12.1 Goodness of fit 304
7.12.2 Distributed-lag shapes 304

7.13 Exercises 306

8 Dynamic Systems 309
8.1 Introduction 309
8.2 Statistical formulation 310
8.3 Theoretical formulation 311
8.4 Closed linear systems 313
8.4.1 Formulation 313
8.4.2 Invariance under linear transformations 313
8.4.3 Cointegration 315
8.5 Open linear systems 316
8.5.1 Conditional systems 316
8.5.2 Simultaneous equations 317
8.5.3 Cointegration 317
8.6 Modelling dynamic systems 318
8.6.1 The economy is a system 319
8.6.2 To test marginalization 319
8.6.3 Simultaneity 319
8.6.4 To test weak exogeneity 320
8.6.5 To check identification 320
8.6.6 Cointegration is a system property 320
8.6.7 To test cross-equation dependencies 320
8.6.8 To investigate system dynamics 321
8.7 A typology of open linear dynamic systems 321
8.7.1 Vector equilibrium-correction system 322
8.7.2 Static system 323
8.7.3 Vector autoregression 323
8.7.4 Differenced system 323
8.7.5 Leading indicator 323
8.7.6 Partial adjustment 324
8.7.7 Common factor 324
8.7.8 Finite distributed lag 324
8.7.9 Dead start 324
8.7.10 An empirical illustration 325
8.8 Models of linear systems 329
8.8.1 Vector autoregressive representation 329
8.8.2 Vector equilibrium correction 330
8.8.3 Simultaneous-equations model 331
8.8.4 Conditional model 332
8.8.5 Conditional simultaneous model 333
8.8.6 Causal chain 333
8.8.7 Block-recursive representation 334
8.8.8 Triangular representation 335
8.8.9 Empirical illustrations 335
8.9 Analysing dynamic systems 337

8.9.1 Dynamic multipliers 339
8.9.2 Final forms 340
8.9.3 Non-linearity 340
8.9.4 Dynamic simulation 341
8.10 Exercises 343

9 The Theory of Reduction 344
9.1 Introduction 344
9.2 Data transformations and aggregation 346
9.3 Parameters of interest 347
9.4 Data partition 350
9.5 Marginalization 350
9.6 Sequential factorization 352
9.6.1 Sequential factorization of W_T^1 352
9.6.2 Marginalizing with respect to V_T^1 352
9.7 Mapping to I(0) 353
9.8 Conditional factorization 354
9.9 Constancy 355
9.10 Lag truncation 356
9.11 Functional form 356
9.12 The derived model 357
9.13 Econometric concepts as measures of no information loss 359
9.14 Implicit model design 361
9.15 Explicit model design 361
9.16 A taxonomy of evaluation information 362
9.16.1 Past data 363
9.16.2 Present data 363
9.16.3 Future data 363
9.16.4 Theory information 363
9.16.5 Measurement information 364
9.16.6 Rival models 364
9.17 Exercises 367

II Statistical Tools for Econometric Analysis 369

10 Likelihood 371
10.1 Review of Part I 371
10.2 The statistical model 373
10.3 Estimation criteria and estimation methods 374
10.4 The likelihood function 377
10.5 Maximum likelihood estimation 378
10.6 Properties of the score 379
10.7 Properties of maximum likelihood estimators 382
10.8 Large-sample properties of MLEs 384

10.9 Two solved examples 387
10.10 Misleading inference when $V \neq \mathcal{I}^{-1}$ 391
10.11 Derived distributions 393
10.12 Asymptotic equivalence 394
10.13 Concentrated likelihood functions 395
10.14 Marginal and conditional distributions 396
10.15 Estimator generating equations 397
10.16 An EGE for common-factor dynamics 398
10.17 Exercises 399

11 Simultaneous Equations Systems 405
11.1 Introduction 405
11.2 The statistical system 406
11.3 System dynamic specification 407
11.4 System estimation 409
11.5 System cointegration estimation 412
11.6 System evaluation 418
11.7 Empirical cointegration illustration 419
11.8 The econometric model 421
11.9 Identification 422
11.10 An EGE for simultaneous equations estimation 423
11.10.1 Non-linear parameters 428
11.10.2 Vector autoregressive errors 429
11.11 A solved example 430
11.12 Simultaneous equations modelling 433
11.13 Derived statistics 434
11.14 Empirical model estimates 436
11.15 Exercises 440

12 Measurement Problems in Econometrics 442
12.1 Introduction 442
12.2 Errors in variables 443
12.2.1 Analysing the errors-in-variables model 445
12.2.2 Instrumental variables 449
12.3 Dynamic latent-variables models 451
12.3.1 Method of simulated moments 453
12.3.2 Simulated likelihood functions 455
12.3.3 A dynamic min-condition model 456
12.3.4 Exogeneity issues 458
12.4 Revisions to I(1) data 459
12.4.1 Revisions to price indices 459
12.4.2 An empirical illustration 461
12.5 The impact of measurement errors on ECMs 463
12.6 Exercises 466

13 Testing and Evaluation 468
13.1 The statistical framework 468
13.2 Non-central χ^2 distributions 470
13.3 Large-sample properties of tests 472
13.4 Understanding the non-central χ^2 distribution 474
13.5 Test power 476
13.6 Likelihood-ratio, Wald, and Lagrange-multiplier tests 477
13.6.1 Likelihood-ratio tests 478
13.6.2 Wald tests 479
13.6.3 Lagrange-multiplier or efficient-score tests 480
13.7 Comparing the tests 480
13.8 A solved example 482
13.9 Non-linear restrictions 485
13.10 Some methodological considerations 487
13.10.1 The null hypothesis 487
13.10.2 The alternative hypothesis 488
13.10.3 The test statistics 488
13.10.4 The significance level 490
13.10.5 Multiple testing 490
13.11 Exercises 492

III Empirical Modelling 499

14 Encompassing 501
14.1 Introduction 501
14.2 Augmenting the conventional testing strategy 503
14.2.1 Rejection is not final 503
14.2.2 Corroboration is not definitive 504
14.3 Encompassing and mis-specification analysis 505
14.4 Formalizing encompassing 506
14.5 Levels of analysis 509
14.5.1 Specification encompassing 510
14.5.2 Mis-specification encompassing 510
14.5.3 Selection encompassing 510
14.6 Parsimonious encompassing 511
14.7 A simple example 512
14.7.1 Can $\mathsf{M}_1 \mathcal{E} \mathsf{M}_2$? 513
14.7.2 Can $\mathsf{M}_2 \mathcal{E} \mathsf{M}_1$? 514
14.8 Nesting and encompassing 514
14.9 Encompassing in linear regression 516
14.10 Encompassing in stationary stochastic processes 520
14.11 A solved example 523
14.12 An empirical illustration 525
14.13 Encompassing the VAR 527

14.14 Testing the Lucas critique 529
14.15 The applicability of the critique 531
14.16 Tests for super exogeneity 532
14.17 Encompassing implications of feedback versus feedforward models 534
14.17.1 Does $H_b \mathcal{E} H_e$? 535
14.17.2 Does $H_e \mathcal{E} H_b$? 535
14.17.3 Incomplete information 536
14.17.4 Implications 536
14.18 Empirical testing of invariance 536
14.18.1 Testing super exogeneity 537
14.18.2 Testing encompassing 538
14.19 Exercises 539

15 Modelling Issues **544**
15.1 Data mining 544
15.2 Theory dependence versus sample dependence 546
15.2.1 Theory-driven approaches 546
15.2.2 Data-driven approaches 547
15.2.3 Bayesian approaches 547
15.2.4 Data modelling using economic theory guidelines 547
15.3 Progressive research strategies 550
15.3.1 Identified cointegration vectors 550
15.3.2 Orthogonal parameters 552
15.3.3 Inappropriate estimation 553
15.3.4 Common trends 553
15.3.5 Residual analysis 553
15.3.6 Expectations and structure 553
15.4 Pyrrho's lemma 554
15.5 Dummy variables 557
15.6 Seasonal adjustment 559
15.6.1 Seasonal filters 561
15.6.2 Properties of seasonal filters 562
15.6.3 Cointegration 563
15.7 Approximating moving-average processes 565
15.8 A solved example: modelling second moments 568
15.9 Populations and samples 574
15.10 Exercises 576

16 Econometrics in Action **577**
16.1 The transactions demand for money 577
16.2 Economic theories of money demand 579
16.3 Econometric formulation 581
16.4 Financial innovation 583
16.5 Data description 585
16.6 A small monetary system 591

16.7 Cointegration analysis 597
16.8 Modelling the I(0) PVAR 600
16.9 Evaluating the model 604
16.10 A single-equation money-demand model 606
16.11 Transformation and reduction 611
16.12 Post-modelling evaluation 614
16.12.1 Learning adjustment 615
16.12.2 Constancy 615
16.12.3 Encompassing 616
16.13 Testing the Lucas critique 616
16.14 Post-sample evaluation 618
16.15 Policy implications 618
16.16 Data definitions 619

IV Appendices 621

A1 Matrix Algebra 623
A1.1 Summary of the appendix chapters 623
A1.2 Matrices 625
A1.3 Matrix operations 627
A1.4 Relations between operations 633
A1.5 Partitioned inverse 634
A1.6 Polynomial matrices 635

A2 Probability and Distributions 639
A2.1 Introduction 639
A2.1.1 Chance 639
A2.1.2 Empirical distributions and histograms 639
A2.2 Events 641
A2.2.1 Random experiments, sets, and sample spaces 641
A2.2.2 Complements, unions, and intersections 642
A2.2.3 Event space 644
A2.2.4 Measurability 646
A2.3 Probability 646
A2.3.1 Probability spaces 647
A2.3.2 Conditional probability 648
A2.3.3 Stochastic independence 651
A2.4 Random variables 653
A2.4.1 Mapping events to numbers 653
A2.4.2 Image sets 654
A2.4.3 Functions of random variables 655
A2.5 Distribution and density functions 656
A2.5.1 Cumulative distribution function 656
A2.5.2 Density function 656

A2.5.3 Change of variable 657
A2.5.4 Normal distribution 657
A2.5.5 Parameters, probability models, and distributions 658
A2.6 Joint distributions 659
A2.6.1 Joint distribution functions 659
A2.6.2 Marginal distributions 659
A2.6.3 Conditional distributions 661
A2.7 Expectations 662
A2.7.1 Expectations, moments, and correlations 662
A2.7.2 Conditional expectations and minimum variance 663
A2.7.3 Indicator functions 665
A2.7.4 Chebychev's inequality 666
A2.8 Bivariate normal distribution 666
A2.8.1 Change of variable 666
A2.8.2 The bivariate normal density 667
A2.8.3 Conditional normal 668
A2.8.4 Regression 669
A2.9 Multivariate normal 670
A2.9.1 Multivariate normal density 670
A2.9.2 Multiple regression 670
A2.9.3 Multivariate regression 671
A2.9.4 Functions of normal variables: χ^2, t and F distributions 672
A2.10 Exercises 674

A3 Statistical Theory **677**
A3.1 Sampling distributions 677
A3.1.1 Statistics 677
A3.1.2 Derived distributions 678
A3.1.3 χ^2, t, and F distributions 680
A3.1.4 Sufficiency 681
A3.1.5 Estimation criteria 683
A3.1.6 Consistency and asymptotic efficiency 684
A3.2 Likelihood 684
A3.2.1 Likelihood function 684
A3.2.2 Log-likelihood 685
A3.2.3 Estimation 685
A3.2.4 The score and the Hessian 686
A3.3 Maximum-likelihood estimation 687
A3.3.1 Efficiency and the information matrix 687
A3.3.2 Cramér–Rao bound 688
A3.3.3 Properties of the information matrix 689
A3.3.4 Estimating the information matrix 689
A3.4 Statistical inference and testing 690
A3.4.1 Null and alternative hypotheses 690
A3.4.2 Critical regions, error types, and power 690

A3.4.3 Significance level 691
A3.5 Powerful tests 692
A3.5.1 Neyman–Pearson lemma 692
A3.5.2 Likelihood-ratio, Wald, and efficient-score tests 693
A3.6 Non-parametric density estimation 694
A3.7 Multiple regression 695
A3.7.1 The multiple-regression model 695
A3.7.2 Ordinary least squares 696
A3.7.3 The Gauss–Markov theorem 698
A3.7.4 Distributional results 698
A3.7.5 Subsets of parameters 700
A3.7.6 Partitioned inversion 702
A3.7.7 Regression and inversion 703
A3.7.8 Multiple correlation 703
A3.7.9 Partial correlation 704
A3.7.10 Maximum-likelihood estimation 705
A3.8 Exercises 706

A4 Asymptotic Distribution Theory 707
A4.1 Introduction 707
A4.2 Orders of magnitude 710
A4.2.1 Deterministic sequences 710
A4.2.2 Stochastic sequences 711
A4.3 Stochastic convergence 712
A4.4 Laws of large numbers 714
A4.4.1 Weak law of large numbers 714
A4.4.2 Strong law of large numbers 714
A4.5 Central-limit theorems 715
A4.6 Vector random variables 718
A4.7 Solved examples 719
A4.7.1 Example 1: an IID process 719
A4.7.2 Example 2: A trend model 720
A4.8 Stationary dynamic processes 722
A4.8.1 Vector autoregressive representations 722
A4.8.2 Mann and Wald's theorem 723
A4.8.3 Hannan's theorem 724
A4.8.4 Limiting distribution of OLS for a linear equation 725
A4.9 Instrumental variables 728
A4.10 Mixing processes 730
A4.10.1 Mixing and ergodicity 730
A4.10.2 Uniform mixing and α-mixing processes 731
A4.10.3 Laws of large numbers and central-limit theorems 732
A4.11 Martingale difference sequences 733
A4.11.1 Constructing martingales 733
A4.11.2 Properties of martingale-difference sequences 734

A4.11.3 Applications to maximum-likelihood estimation 736
A4.12 A solved autoregressive example 738
A4.13 Higher-order approximations 741
A4.13.1 Delta method 741
A4.13.2 Asymptotic expansions 742
A4.13.3 Power-series expansions 744
A4.13.4 Addendum 746
A4.14 Exercises 748

A5 Numerical Optimization Methods 751
A5.1 Introduction 751
A5.2 An overview of numerical optimization 753
A5.3 Maximizing likelihood functions 757
A5.4 Scalar optimization 759
A5.4.1 Search methods 761
A5.4.2 Gradient methods 765
A5.5 Multivariate optimization 767
A5.5.1 Gradient methods 767
A5.5.2 Step-wise optimization 771
A5.5.3 Conjugate directions 773
A5.5.4 Variable metric or quasi-Newton methods 776
A5.6 Conclusion 779
A5.7 Exercises 780

A6 Macro-Econometric Models 781
A6.1 Introduction 781
A6.2 The skeletal structure of macro models 782
A6.2.1 Modelled variables 782
A6.2.2 Time lags 783
A6.2.3 Error terms 784
A6.2.4 Time aggregation 784
A6.2.5 Interdependence 785
A6.2.6 Size 785
A6.2.7 The economy as a system 785
A6.3 The national income accounts 786
A6.3.1 Commodity flows 786
A6.3.2 Aggregating economic transactions 786
A6.3.3 Reconciling nominal and real magnitudes 786
A6.4 The components of macro models 787
A6.4.1 Kinds of variables 787
A6.4.2 Kinds of equations 788
A6.4.3 Behavioural equations 789
A6.4.4 Identity equations 789
A6.4.5 Technical equations 790
A6.4.6 Equilibrium conditions 790

A6.4.7 Stock–flow equations 791
A6.4.8 Adjustment equations 791
A6.4.9 Expectations formation 791
A6.4.10 Observation equations 792
A6.5 A simultaneous system of equations 792
A6.5.1 Price dynamics 792
A6.5.2 Simultaneity 793
A6.6 Sectors and markets 794
A6.6.1 Households 795
A6.6.2 Firms 796
A6.6.3 Static-equilibrium solutions 798
A6.6.4 Dynamic adjustment 800
A6.7 Additional aspects of the first model 801
A6.7.1 Financial markets 801
A6.7.2 Government sector 801
A6.7.3 Foreign sector 802
A6.7.4 Completing equations 803
A6.7.5 Revised National Income identities 805
A6.8 Industrial disaggregation 805
A6.9 A general framework 807
A6.9.1 Stable process 809
A6.9.2 Trending process 809
A6.9.3 Difference stable process 809
A6.9.4 Quadratic trend process 809
A6.9.5 Integrated process 810
A6.9.6 Cointegrated process 810
A6.10 Forecasting 810
A6.10.1 Forecast standard errors 811
A6.10.2 Model evaluation 811
A6.11 An example 812
A6.12 Addendum: static-model solution 815
A6.13 Macro-model notation 817
