

Eric Allen and Marija Ilić

Price-Based Commitment Decisions in the Electricity Market

With 43 Figures

Springer

CONTENTS

1	Introduction	1
2	The Unit Commitment Problem	5
2.1	Unit Commitment in a Regulated Industry	5
2.2	Present Unit Commitment Solution Methods	9
2.3	Interruptible Service Contracts	9
3	Unit Commitment in a Deregulated Environment	11
3.1	Possible Formats for the Electricity Market	11
3.1.1	The Poolco Marketplace	12
3.1.2	The Market of Bilateral Contracts	12
3.2	Unit Commitment for an Individual Supplier	12
3.2.1	Bilateral Market	13
3.2.2	Poolco Market	14
3.3	Multiple Generation	15
3.4	Secondary Market for Reliability	16
3.5	Other Issues	16
4	Survey of the Dynamic Programming Formulation	17
4.1	Finite Horizon Problems	17
4.2	Infinite Horizon Problems with a Discount Factor	18
4.3	Stochastic Shortest Path Problems	19
4.4	Average Cost per Stage Problems	20
5	Unit Commitment for an Individual Power Producer	23
5.1	Unit Commitment without Generation Limits	24

5.2	Unit Commitment with Generation Limits	25
5.2.1	Truncated Normal Distributions	26
5.2.2	Truncated Lognormal Distributions	27
5.2.3	Expected Profit of Generation	28
6	Price Process of Electricity	31
6.1	Price Process Models	31
6.1.1	Long Term Model Behavior	33
6.1.2	Price Models using Logarithms	35
6.1.3	Unit Root Tests	35
6.1.4	Application of Unit Root Test to PJM Electricity Data	36
6.2	Correlation of Price with Load	36
6.2.1	Expanded Price Process Models	39
6.2.2	Test for Mean Reversion	40
6.2.3	Price Prediction Algorithms	41
6.3	Correlation of Load with Date	46
6.4	Correlation of Load with Temperature	48
6.4.1	Overview of Linear Regression Analysis	49
6.4.2	Application of Regression to Temperature/Load Data	54
6.4.3	Conclusions of Regression Analysis for Load vs. Tem- perature	55
6.5	Effects of Variance of Load Estimation	55
7	Computational Complexity of Unit Commitment	57
7.1	Dynamic Programming Algorithm	58
7.2	Heuristic Simplifications	59
7.3	Ordinal Optimization	60
7.3.1	Overview of Ordinal Optimization	60
7.3.2	Application to Unit Commitment	64
7.4	Example	65
7.4.1	Solution by Dynamic Programming	67
7.4.2	Solution by Ordinal Optimization	68
8	Forward Contracts and Futures	79
8.1	Forward Contracts	79
8.2	Producer Profits with Forward Contracts	80

8.3	Forward Contract Strategies	82
8.3.1	One Hour Forward Contracts	82
8.3.2	Multi-Hour Forward Contract	84
8.3.3	Example	85
8.4	Temporal Forward Contract Problem	86
9	Reserve Markets for Power System Reliability	89
9.1	General Form of a Reserve Market	89
9.1.1	Payment for Power Delivered	90
9.1.2	Payment for Reserve Allocated	90
9.1.3	Price Process for Reserve Price	91
9.2	Individual Power Producer Strategies for Selling Reserve . . .	91
9.2.1	Payment for Power Delivered	91
9.2.2	Payment for Reserve Allocated	93
9.3	Provision of Reserve for Transactions	94
9.4	Effect of Reserve Market on Unit Commitment	95
9.5	Example	96
10	Unit Commitment in Congested Transmission Systems	99
10.1	Probabilistic Model of Congestion	99
10.1.1	Modifications to Price Model	100
10.1.2	Congestion Model with Limits	100
10.2	Producer Strategy under Congestion	100
10.3	Example	101
10.4	Solution of Unit Commitment under Congestion and Reserve	102
11	Conclusions	105
A	Calculation of Parameters for Price Processes	109
A.1	Exponential of a Normally Distributed Variable	109
A.2	Nonlinear Least Squares Regression	110
A.3	Recursive Least Squares Algorithm	113
B	Results of Regression of Load vs. Temperature	115
B.1	Regression on Same Day High Temperature	115
B.2	Regression using Previous Day's High Temperature	146

C	Derivation of Formulas for Truncated Random Variables	173
C.1	Truncated Normal Distributions	173
C.2	Truncated Lognormal Distributions	182
D	Software for Unit Commitment	189
D.1	Dynamic Programming Software	189
D.2	Ordinal Optimization Software	194
D.3	Reserve and Congestion DP Software	196
D.4	Source Code for <code>uci2.c</code>	198
D.5	Source Code for <code>ucoc1.c</code>	206
D.6	Source Code for <code>uci2rs.c</code>	215
D.7	Source Code for <code>uci2con.c</code>	222
D.8	Source Code for <code>ucerr.h</code>	229
D.9	Source Code for <code>ucerroo.h</code>	230
E	Stochastic Unit Commitment in a Regulated Industry	231
E.1	Unit Commitment with a Finite Horizon	231
E.2	Solution of Optimal Power Flow	232
E.2.1	Uncongested, Lossless Optimal Power Flow without Generation Limits	232
E.3	Expected Value of the Generation Cost	233
E.3.1	Expected Cost over Load Power	234
E.3.2	Expected Cost over Generation Failures	235
	Bibliography	237
	Index	241
