Preface x

1 **Modelling real–financial interrelationships** 1
1.1 The transmission mechanism of monetary and financial policy 1
1.2 Empirical approaches to evaluating the effects of monetary and financial policy on the economy 4

2 **The 'Yale' approach to modelling sectoral financial behaviour** 11
2.1 Interrelationships in a general equilibrium system 11
2.2 Sectoral, temporal and asset aggregation 15
2.3 The Brainard–Tobin 'Pitfalls' model 21
2.4 Practical problems with the Yale approach 33

3 **Integrated modelling of expenditure and portfolio behaviour** 38
3.1 Wealth effects on consumption 39
3.2 The desirability of integrated modelling of expenditure and portfolio behaviour 42
3.3 Sequential and integrated models 47
3.4 A general integrated model incorporating sequencing effects and portfolio composition effects on consumption 52

4 **Estimation methods for portfolio and integrated models subject to adding-up and other restrictions** 59
4.1 The general integrated model in matrix notation 60
4.2 Singularity and implications for estimation 61
4.3 Classification of models by appropriate estimation methods 64
4.4 Identification and invariance in the general integrated model 70

4.5 Autoregressive estimation of portfolio–expenditure models 74
4.6 Summary 76

5 Empirical applications of the Yale approach: a survey 77
5.1 Empirical modelling of portfolio behaviour 77
5.2 Empirical applications of integrated models 96
5.3 Empirical portfolio studies of the U.K. personal sector 102
5.4 The Yale approach and modelling the monetary/financial sector in large-scale macroeconometric models 107

6 The U.K. personal sector's portfolio: sources of quarterly stock and flow data 113
6.1 Development of balance sheet data in the U.K. 113
6.2 The asset and liability categories 117
6.3 Quarterly estimates for the stock of consumer durables 122
Appendix: Detailed definitions and sources of data 124

7 Estimation and testing: the Purvis integrated model 130
7.1 OLS estimates 131
7.2 Portfolio composition effects on expenditure and asset demands 139
7.3 Cross-equation, liquidity and credit effects 142

8 Estimation and testing: the simultaneous integrated model 147
8.1 Systems estimation of the maintained model 147
8.2 Portfolio composition effects in the simultaneous integrated model 153

9 Conclusion 160
