# CONTENTS

*List of Figures* xix
*List of Tables* xxii
*Preface* xxiv

PART I: THE ECONOMIC ENVIRONMENT 1

*Introduction* 3

0.1 What is Economics? 3
0.2 The Analytical Framework of Economics 5
0.3 Neoclassical Economics vs. New Classical Economics 10
0.4 Structure of the Text and Suggestions for its Use 15
Key Terms and Review 19
Further Reading 19
Questions 20

*Chapter 1: Preference and the Utility Function* 23

1.1 The Scientific Approach to the Study of Human Behavior 23
1.2 Preference and the Utility Function 24
1.3 The Convex Preference Relation, Quasi-concave Utility Functions, Diminishing Marginal Rates of Substitution, and Desire for Diverse Consumption 30
1.4 Ordinal vs. Cardinal Theory of Utility and Diminishing Marginal Rate of Substitution vs. Diminishing Marginal Utility 34
Key Terms and Review 35
Further Reading 36
Questions 36
Exercises 36

*Chapter 2: Production Conditions* 38

2.1 The Neoclassical Framework vs. the New Classical Framework 38
2.2 The Neoclassical Production Environment 39
2.3 The New Classical Production Environment 43
*2.3.1 Economies of specialization* 45
*2.3.2 Division of labor* 48
*2.3.3 Exogenous comparative advantage and economies of division of labor* 48
*2.3.4 Endogenous absolute and comparative advantages* 53
2.4 Endogenous cum Exogenous Comparative Advantage 59
Key Terms and Review 61
Further Reading 62
Questions 62
Exercises 63

PART II: THE NEOCLASSICAL FRAMEWORK 67

*Chapter 3: Neoclassical Decision Problems* 69

3.1 Budget Constraint and Dichotomy between Pure Consumers and Firms 69
3.2 A Pure Consumer's Constrained Utility Maximization Problem 71
3.3 Comparative Statics of the Pure Consumer's Utility Maximization Problem 76
3.4 A Pure Consumer's Expenditure Minimization Problem 79
3.5 Recovering the Utility Function from a Demand System 83
3.6 Revealed Preference 84
3.7 A Producer's Decision Problem in a Walrasian Regime 85
Key Terms and Review 89
Further Reading 90
Questions 90
Exercises 91

*Chapter 4: General Equilibrium in the Neoclassical Framework* 94

4.1 General Equilibrium in a Walrasian Model 94
4.2 Neoclassical General Equilibrium Models 98
4.3 Comparative Statics of Neoclassical General Equilibrium 103
4.4 Welfare Implications of Neoclassical General Equilibrium 111
4.5 Equilibrium in Neoclassical Game Models 113
*4.5.1 Game models* 113
*4.5.2 Nash equilibrium* 113
*4.5.3 Subgame perfect equilibrium* 116
*4.5.4 Bayes equilibrium* 117
*4.5.5 Sequential equilibrium* 118
Key Terms and Review 121

Further Reading 122
Questions 122
Exercises 123

PART III: THE NEW CLASSICAL FRAMEWORK 129

*Chapter 5: Consumer-producers' Decisions to Choose the Optimum Level and Pattern of Specialization* 131

5.1 The New Classical Framework and Transaction Costs 131
5.2 Configurations and Corner Solutions in the New Classical Framework 133
5.3 The Optimum Resource Allocation for a Given Level and Pattern of Specialization 136
5.4 The Optimum Level and Pattern of Specialization 141
*5.4.1 Inframarginal analysis of demand and supply* 141
*5.4.2 Inframarginal and marginal comparative statics of decisions* 143
5.5 Neoclassical and New Classical Laws of Supply and Elasticity of Substitution 143
Key Terms and Review 145
Further Reading 146
Questions 146
Exercises 148

*Chapter 6: New Classical General Equilibrium and Its Welfare Implications* 149

6.1 Neoclassical vs. New Classical General Equilibrium 149
6.2 How Does the Market Coordinate the Division of Labor and Utilize Network Effects? 151
*6.2.1 Structure, corner equilibrium, and resource allocation for a given structure of division of labor* 152
*6.2.2 General equilibrium level and structure of division of labor - How does the market coordinate division of labor to utilize network effects?* 156
6.3 Inframarginal Comparative Statics of New Classical General Equilibrium 158
*6.3.1 Inframarginal vs. marginal comparative statics of new classical general equilibrium* 158
*6.3.2 Comparative statics of decisions vs. comparative statics of equilibrium* 161
*6.3.3 The inappropriateness of marginal cost pricing and the difference between neoclassical and new classical general equilibrium* 162
6.4 Efficiency of the Invisible Hand 163
*6.4.1 The first welfare theorem in the new classical framework* 163
*6.4.2 Economic development and disparity between the Pareto optimum and the PPF* 165
*6.4.3 Interdependence and conflict between efficient resource allocation and efficient organization* 165

Key Terms and Review 167
Further Reading 168
Questions 168
Exercises 169

*Chapter 7: Trade Pattern and Professional Middlemen* 171

7.1 Why Can Professional Middleman Make Money? What Are the Determinants of Business Success? 171
7.2 A Model with Trading Activities and Heterogeneous Parameters 172
7.3 The Decision to be a Professional Middleman 173
7.4 Market Structures and Corner Equilibria 175
*7.4.1 Basic vs. nonbasic structures* 175
*7.4.2 Definitions of corner and general equilibria* 177
7.5 The Equilibrium Size of the Network of Division of Labor 179
7.6 Emergence of Professional Middlemen and a Hierarchical Structure of Economic Organization 181
7.7 Determinants of Trade Pattern and Successful Business 182
Key Terms and Review 185
Further Reading 185
Questions 185
Exercises 188

PART IV: THE INSTITUTION OF THE FIRM AND PRICING THROUGH BARGAINING AND CONTRACTING 189

*Chapter 8: The Labor Market and the Institution of the Firm* 191

8.1 What is the Institution of the Firm 191
8.2 Is It Fair to have an Asymmetric Relationship between Boss and Employees? – The Story behind the Model 193
8.3 Emergence of the Firm from the Division of Labor 196
*8.3.1 Economies of roundabout production* 196
*8.3.2 The corner equilibria in four structures* 197
*8.3.3 The general equilibrium structure of transactions and residual rights* 202
8.4 The Distinction between *ex ante* and *ex post* Production Functions and the New Classical Analysis of Demand and Supply 206
8.5 Economies of Division of Labor and the Firm, and the Coase Theorem 207
Key Terms and Review 210
Further Reading 210
Questions 211
Exercises 213

*Chapter 9: Pricing Mechanisms Based on Bargaining* 216

9.1 Bargaining Games, Strategic Behavior, Opportunistic Behavior 216
9.2 Nash Bargaining Games 217
9.3 Endogenous Transaction Costs caused by Information Asymmetry 221
9.4 Alternating-offer Bargaining Games 223
9.5 Dynamic Bargaining Games and the Division of Labor 225
9.6 How Does Competition for a Greater Share of Gains from the Division of Labor Generate Endogenous Transaction Costs? 227
9.7 How Can Endogenous Transaction Costs be Eliminated by Consideration of Reputation? 230
Key Terms and Review 231
Further Reading 231
Questions 232
Exercises 233

*Chapter 10: Endogenous Transaction Costs and Theory of Contract, Ownership, and Residual Rights* 234

10.1 Endogenous Transaction Costs and Moral Hazard 234
10.2 Neoclassical Principal–Agent Models 236
10.3 A New Classical General Equilibrium Principal-Agent Model 240
10.4 The Trade-off between Endogenous Transaction Costs caused by Moral Hazard and Monitoring Cost 245
10.5 The Grossman–Hart–Moore Model of Optimal Ownership Structure 247
10.6 Noncredible Commitment and Soft Budget Constraint 251
Key Terms and Review 252
References 253
Questions 253
Exercises 254

PART V: TRADE THEORY AND MORE GENERAL NEW CLASSICAL MODELS 257

*Chapter 11: The Emergence of International Trade from Domestic Trade and Emergence of New Products* 259

11.1 Endogenous Trade Theory and Endogenous Number of Consumer Goods 259
11.2 A New Classical Trade Model with Fixed Learning Costs 262
11.3 How are Demand and Supply Functions Determined by Individuals' Levels of Specialization? 262
11.4 Inframarginal Comparative Statics of Optimum Decisions 266
11.5 How is the Level of Division of Labor in Society Determined in the Market? 267

11.6 Inframarginal Comparative Statics of General Equilibrium and Many Concurrent Economic Phenomena 270
11.7 Emergence of International Trade from Domestic Trade 274
11.8 Co-movement of Division of Labor and Consumption Variety 275
11.9 Trade-off between Economies of Specialization and Coordination Costs 278
11.10 A Neoclassical Model Endogenizing the Number of Consumption Goods on the Basis of the Trade-off between Economies of Scale and Consumption Variety 280
11.11 An Extended Murphy–Shleifer–Vishny Model with Compatibility between Economies of Scale and Competitive Markets 285
Key Terms and Review 288
Further Reading 289
Questions 289
Exercises 292

*Chapter 12: Exogenous Comparative Advantages in Technology and Endowment, Division of Labor, and Trade* 294

12.1 Endogenous vs. Exogenous Comparative Advantage 294
12.2 A Ricardian Model with Exogenous Comparative Technological Advantage and Transaction Costs 296
12.3 Analysis of Decisions vs. Analysis of Equilibrium 301
12.4 Economic Development and Trade Policy 305
12.5 Comparative Endowment Advantage and Trading Efficiency 312
Key Terms and Review 320
Further Reading 320
Questions 321
Exercises 324

*Chapter 13: More General New Classical Models* 326

13.1 The Theoretical Foundation of New Classical Economics 326
13.2 A General New Classical Model with *ex ante* Different Consumer-producers 328
13.3 The Existence of a Competitive Equilibrium 330
13.4 An Equilibrium Organism and the Efficiency of the Invisible Hand in Coordinating Division of Labor 335
13.5 A New Classical Model with both Endogenous and Exogenous Comparative Advantages 337
13.6 Trade Pattern and Income Distribution 340
Key Terms and Review 346
Further Reading 347
Questions 347
Exercises 350

PART VI: URBANIZATION, POPULATION, AND THE TRADE-OFF BETWEEN WORKING AND LEISURE 355

*Chapter 14: Urbanization, the Dual Structure between Urban and Rural Areas, and the Division of Labor* 357

14.1 Why and How Cities Emerge from the Division of Labor 357
14.2 The emergence of Cities and of the Dual Structure between Urban and Rural Areas 359
14.3 Why Geographical Concentration of Transactions Can Improve Transaction Efficiency 363
14.4 Simultaneous Endogenization of Level of Division of Labor, Location Pattern of Residences, Geographical Pattern of Transactions, and Land Prices 369
14.5 The Fujita–Krugman Model of Urbanization 379
Key Terms and Review 382
Further Reading 382
Questions 383
Exercises 384

*Chapter 15: The Trade-off between Working and Leisure, and the Effects of Resource Scarcity and Population Size on the Division of Labor* 385

15.1 Why Can Division of Labor Enlarge the Scope for the Efficient Trade-off between Working and Leisure? 385
15.2 Why Leisure Time and Per Capita Consumption of Goods Increase as Division of Labor Develops 388
15.3 Why Can a Resource Shortage Crisis Promote Evolution in Division of Labor and Productivity? 391
15.4 Implications of High Population Density for Evolution in Division of Labor through Its Effect on the Per Capita Investment Cost of Infrastructure 394
Key Terms and Review 398
Further Reading 398
Questions 398
Exercises 399

PART VII: THE TRADE-OFF BETWEEN ECONOMIES OF DIVISION OF LABOR AND THE COORDINATION RELIABILITY OF THE NETWORK OF DIVISION OF LABOR 401

*Chapter 16: The Economics of Property Rights and the Division of Labor* 403

16.1 Uncertainties in Transactions and the Economics of Property Rights 403

16.2 Trade-offs among Economies of Division of Labor, Coordination Reliability, and the Benefits of Competition 407
16.3 Endogenization of Coordination Reliability in Each Transaction 411
*16.3.1 The Yang–Wills model endogenizing risk of coordination failure for each transaction* 412
*16.3.2 The efficient extent of externalities* 413
*16.3.3 Perfect competition is inefficient* 414
*16.3.4 Risk of mass unemployment* 414
*16.3.5 The economics of property rights and the soft budget constraint* 416
16.4 Substitution between Precise Enforcement of Property Rights and Competition 419
Key Terms and Review 424
Further Reading 425
Questions 425
Exercises 427

*Chapter 17: Insurance and Risk of Coordination Failure of the Network of Division of Labor* 430

17.1 Uncertainty and Risk Aversion 430
17.2 A Model with Insurance and Endogenous Specialization in the Absence of Moral Hazard 432
17.3 The Division of Labor and Endogenous Transaction Costs caused by Complete Insurance 436
Key Terms and Review 444
Further Reading 444
Questions 444
Exercises 445

PART VIII: THE HIERARCHICAL STRUCTURE OF DIVISION OF LABOR 447

*Chapter 18: The Division of Labor in Roundabout Production and Emergence of New Machines and Related New Technology* 449

18.1 New Classical vs. Neoclassical Views on the Emergence of New Producer Goods and Related New Technology 449
18.2 A Model with Endogenous Technical Progress, an Endogenous Number of Producer Goods, and Endogenous Specialization 451
18.3 The Efficient Number of Producer Goods and Level of Specialization 453
18.4 The Corner Equilibria in Nine Structures 454
18.5 Concurrent Changes in the Level of Division of Labor, Productivity, and Input Diversity 458
18.6 *Ex post* Production Functions, Emergence of New Machines, and Endogenous Technical Progress 459

18.7 Changes in the Economic Structure and Topological Properties of Economic Organisms 460
18.8 Evolution in the Number of Producer Goods and Economic Development 462
Key Terms and Review 467
Further Reading 468
Questions 468
Exercises 470

*Chapter 19: Industrialization and the Division of Labor in Roundabout Production* 472

19.1 The Features of Industrialization 472
19.2 A General Equilibrium Model Endogenizing Production Roundaboutness 476
19.3 Corner Equilibria and the Emergence of New Industry 477
19.4 General Equilibrium and Industrialization 480
19.5 Changes in the Income Shares of the Industrial and Agricultural Sectors 483
19.6 The Number of Possible Structures of Transactions Increases More Than Proportionally as Division of Labor Evolves in Roundabout Production 484
Key Terms and Review 487
Further Reading 487
Questions 487
Exercises 491

*Chapter 20: The Hierarchical Structure of the Network of Division of Labor and Related Transactions* 493

20.1 The Theory of Hierarchy 493
20.2 One-way Centralized Hierarchy 496
20.3 A Decentralized Hierarchy of Transactions and the Division of Labor 498
20.4 Configurations and Market Structures 502
20.5 The General Equilibrium and its Inframarginal Comparative Statics 509
20.6 The Network Hierarchy of Cities and Division of Labor 510
*20.6.1 Consumer-producers, cities, and layers of a hierarchy of cities* 511
*20.6.2 Two types of transaction cost* 512
*20.6.3 The optimal number of layers in a hierarchical structure* 515
Key Terms and Review 517
Further Reading 517
Questions 517
Exercises 518

PART IX: ECONOMIC DEVELOPMENT AND ECONOMIC GROWTH 521

*Chapter 21: Neoclassical Models of Economic Growth* 523

21.1 Exogenous vs. Endogenous Growth 523
21.2 The Ramsey and AK Models 526
21.3 R&D-based Endogenous Growth Models 533
Key Terms and Review 539
Further Reading 540
Questions 540
Exercises 541

*Chapter 22: Economic Growth Generated by Endogenous Evolution in Division of Labor* 544

22.1 Economies of Specialized Learning by Doing and Endogenous Evolution in Division of Labor 544
22.2 A New Classical Dynamic Model with Learning by Doing 547
22.3 Optimum Speed of Learning by Doing and Evolution of Endogenous Comparative Advantage 549
*22.3.1 The function of contracts* 549
*22.3.2 An individual's dynamic decision problem* 550
*22.3.3 Dynamic equilibrium* 551
22.4 Endogenous Evolution of the Extent of the Market, Trade Dependence, Endogenous Comparative Advantages, and Economic Structure 560
22.5 Empirical Evidence and Rethinking Development Economics and Endogenous Growth Theory 563
Appendix 22.1: The Relationship between the Control Theory and Calculus of Variations 568
Key Terms and Review 569
Further Reading 570
Questions 570
Exercises 571

*Chapter 23: Concurrent Endogenous Evolution in Division of Labor, in the Number of Goods, and in the Institution of the Firm* 573

23.1 How Can We Simultaneously Endogenize Evolution in Division of Labor and in the Number of Producer Goods? 573
23.2 A Dynamic Equilibrium Model with Learning by Doing and an Endogenous Number of Producer Goods 575
23.3 Dynamic Equilibrium Level of Specialization and Input Variety 576
23.4 Concurrent Evolution of Specialization, Variety of Producer Goods, and the Institution of the Firm 583

Appendix 23.1: Proof of Lemma 23.1 587
Appendix 23.2: Proof of Proposition 23.1 588
Appendix 23.3: Proof of Proposition 23.2 590
Key Terms and Review 591
Further Reading 592
Questions 592
Exercises 593

*Chapter 24: Experiments with Structures of Division of Labor and Evolution in Organization Information Acquired by Society* 595

24.1 How Does Organization Knowledge Acquired by Society Determine Economic Development? 595
24.2 A Static Model with an Endogenous Length of Roundabout Production Chain and an Endogenous Division of Labor 600
24.3 Interactions between Dynamic Decisions and Evolution in Organization Information 602
24.4 Walrasian Sequential Equilibrium and Concurrent Evolution in Organization Information and Division of Labor 606
Key Terms and Review 616
Further Reading 617
Questions 617
Exercises 619

PART X: MACROECONOMIC PHENOMENA AND THE ENDOGENOUS SIZE OF THE NETWORK OF DIVISION OF LABOR 621

*Chapter 25: Investment and Saving Theory* 623

25.1 Neoclassical Investment and Saving Theory 623
25.2 Neoclassical Models of Self-saving and Interpersonal Loans 626
25.3 New Classical Theory of Investment and Savings 631
*25.3.1 The model* 631
*25.3.2 Configuration sequences and structure sequences* 632
*25.3.3 Dynamic corner equilibria in 16 structure sequences* 635
25.4 Investment, Capital, and Division of Labor in Roundabout Production 637
*25.4.1 Dynamic general equilibrium* 638
*25.4.2 Nontopological properties of economic growth and sudden decline of interest rates* 642
*25.4.3 The endogenous decision horizon and the effect of liberalization reforms on opportunities for lucrative investment* 644
Key Terms and Review 645
Further Reading 645
Questions 646
Exercises 647

*Chapter 26: Money and Division of Labor* 649

26.1 Neoclassical vs. New Classical Theories of Money 649
26.2 A New Classical Model of an Endogenous Monetary Regime 653
26.3 Possible Structures and Monetary Regimes 655
Key Terms and Review 662
Further Reading 662
Questions 663
Exercises 663

*Chapter 27: New Classical Theory of Business Cycles and Unemployment* 665

27.1 Rethinking Macroeconomics 665
27.2 Long-run Regular Efficient Business Cycles, Cyclical Unemployment, Long-run Economic Growth, and Division of Labor in Producing Durable Goods 672
27.3 A New Classical Dynamic Equilibrium Model of Business Cycles and Unemployment 676
27.4 Cyclical vs. Noncyclical Corner Equilibria 678
*27.4.1 Regime specification, configurations, and market structures* 678
*27.4.2 The dynamic corner equilibrium in autarky* 679
*27.4.3 Market structure C* 681
*27.4.4 Market structure P* 683
*27.4.5 Welfare and policy implications of the model* 685
27.5 General Price Level, Business Cycles, and Unemployment Rate 686
27.6 Emergence of Firms and Fiat Money from the Division of Labor 689
Key Terms and Review 691
Further Reading 692
Questions 692
Exercises 694
