# CONTENTS

<b>NOMENCLATURE</b>	<b>xix</b>
<b>CHAPTER 1 THERMAL COMFORT</b>	
1.1 Introduction	1
1.2 Heat Exchange of Body with Surroundings	2
1.2.1 Heat exchange through radiation	2
1.2.2 Heat exchange through convection	7
1.2.3 Evaporative heat losses	7
1.2.4 Respiratory heat losses	8
1.2.5 Heat conduction through clothing	9
1.3 Comfort Equation	9
1.4 Thermal Indices	11
1.4.1 Effective temperature	11
1.4.2 Resultant temperature	13
1.4.3 Wet-bulb globe temperature	13
1.4.4 Equatorial comfort index	14
1.4.5 Heat stress index	15
1.4.6 Index of thermal stress	16
1.4.7 The predicted 4 hours sweat rate	18
1.4.8 Tropical summer index	19
1.4.9 Predicted mean value	22
1.4.10 Wind chill index	24
1.4.11 Humidex	24
1.5 Comparison of Thermal Indices	26
<b>REFERENCES</b>	<b>28</b>

## CHAPTER 2 CLIMATE, SOLAR RADIATION, BUILDING ORIENTATION AND SHADING DEVICES

2.1	Climate	31
2.1.1	Effect of land and water	32
2.1.2	Effect of wind and air mass movement	34
2.1.3	Classification of climates	36
2.2	Solar Radiation	40
2.2.1	Solar declination $\delta$ and equation of time	40
2.2.2	Position of sun relative to horizontal surfaces	42
2.2.3	Position of sun and inclined surfaces	46
2.2.3.1	Surfaces facing south	46
2.2.3.2	Vertical walls/surfaces	47
2.2.4	Extraterrestrial irradiation	49
2.2.4.1	Horizontal surface	49
2.2.4.2	Inclined surface	53
2.2.4.3	Calculation of $R_b$	55
2.2.5	Spectral distribution of solar radiation	56
2.2.6	Attenuation of direct solar radiation	57
2.2.6.1	Scattering	58
2.2.6.2	Absorption	60
2.2.7	Diffuse radiation	63
2.2.8	Global irradiance	67
2.2.8.1	Horizontal surface	67
2.2.8.2	Arbitrarily oriented surface	67
2.2.9	Approximate methods: method of ASHRAE	68
2.2.9.1	Direct radiation	68
2.2.9.2	Diffuse radiation	71
2.2.9.3	Reflected radiation	74
2.2.9.4	Global radiation	74
2.2.9.5	Radiation on inclined surfaces	75
2.3	Building Orientation	76
2.4	Shading Devices	82
2.4.1	Fixed external overhangs	85
2.4.2	Inclined overhangs	86

88

## CHAPTER 3 BUILDING CLUSTERS AND SOLAR EXPOSURES

3.1	Building Forms	91
3.2	Surface Areas	93
3.3	Mutual Shading of Buildings	98
3.4	Computer Programme	101
3.5	Efficiency of Building Form	106

3.6	Performance of the Building Forms	107
3.7	Street Width and Sub-Division	109
3.8	Orientation	109
3.9	Latitude	112
3.10	Conclusions	112
REFERENCES		114
CHAPTER 4 PASSIVE CONCEPTS AND COMPONENTS		
4.1	Introduction	117
4.2	Thermal Environment Within a Building	119
4.3	Passive Heating Concepts	119
4.3.1	Direct gain	119
4.3.2	Indirect method	120
4.3.2.1	Trombe wall	120
4.3.2.2	Water wall	120
4.3.2.3	Transwall	121
4.3.3	Sunspace (attached solarium/greenhouse)	121
4.3.4	Isolated gain	122
4.4	Passive Cooling Concepts	122
4.4.1	Minimization of the direct beam radiation: shading	123
4.4.2	Conduction of heat through walls/roofs	123
4.4.2.1	Shading	123
4.4.2.2	Paints	125
4.4.3	Evaporative cooling	127
4.4.4	Evaporative air coolers	128
4.4.5	Evaporative water coolers	129
4.4.6	Radiative cooling	129
4.4.7	Control of conducted heat by insulation and cavity walls	130
4.4.8	Exploitation of wind, water and earth for cooling in hot arid climates	131
4.5	Passive Heating and Cooling	134
4.5.1	Roof-pond/skytherm	134
4.5.2	Roof radiation trap system	135
4.5.3	Vary therm wall	136
4.5.4	Earth sheltered or earth bermed structures	137
4.5.5	Earth-air tunnels	137
4.6	Ventilation: Removal of Heat Flux	137
4.7	Components	141
4.7.1	Windows	142
4.7.2	Thermal storage	143
4.7.3	Miscellaneous	144

REFERENCES	147
CHAPTER 5 HEAT TRANSMISSION IN BUILDINGS AND BUILDING MATERIALS	
5.1 Modes of Heat-Transfer	151
5.1.1 Conduction	151
5.1.2 Convection	152
5.1.2.1 Dimensionless numbers	153
5.1.2.2 Free convection	154
5.1.2.3 Forced convection	155
5.1.3 Radiation	156
5.1.3.1 Radiative heat exchange	157
5.1.3.2 Radiative heat-transfer to buildings	163
5.2 Surface Coefficients	163
5.2.1 Air cavity or space	165
5.2.2 Internal surface	165
5.2.3 External surface	166
5.3 Air-to-Air Heat Transmission: Overall Thermal Transmittance (U value)	168
5.3.1 Windows and air spaces	168
5.3.2 Walls and windows	169
5.3.3 Pitched roof	169
5.4 Heat-Transfer Due to Ventilation/Infiltration	172
5.5 Intermittent Heat-Transfer	175
5.5.1 Solair temperature	176
5.5.2 Decrement factor	178
5.5.3 Phase lag	178
5.5.4 Admittance	181
5.5.5 Heat-transfer through glass windows	182
REFERENCES	190
CHAPTER 6 MATHEMATICAL MODELS FOR PASSIVE SOLAR HOUSES	
6.1 Approximate Methods	193
6.1.1 Heat losses and degree day	193
6.1.2 Steady state method	195
6.1.2.1 Simple glazed wall (Trombe wall without vents)	195
6.1.2.2 Water wall	196
6.1.2.3 Solarium	196
6.2 Correlation Methods	200
6.2.1 Solar load ratio	200
6.2.2 Load collector ratio	203
6.2.3 Thermal time constant method	205

Contents		xv
6.3	Analytical Methods	208
6.3.1	Thermal circuit analysis	208
6.3.2	The admittance procedure of the matrices	215
6.3.3	Response factor method	223
6.3.4	Finite difference representation	226
6.3.5	The periodic solutions	228
6.3.5.1	A simple building element i.e. roof/wall	229
6.3.5.2	Passive heating concepts with constant internal environment	232
6.3.5.3	Passive cooling concepts with constant internal environment	248
6.4	Unconditioned Buildings	250
REFERENCES		251
CHAPTER 7 PERFORMANCE OF PASSIVE HEATING AND COOLING CONCEPTS		
7.1	Performance of Passive Heating Concepts	253
7.1.1	Direct gain concept	253
7.1.2	Indirect gain concept	256
7.1.3	Transwall	260
7.1.4	Thermic diodes/Heat pipes	263
7.1.5	Conservatory	264
7.2	Performance of Passive Cooling Concepts	265
7.2.1	Shading	266
7.2.1.1	Shading the windows	266
7.2.1.2	Shading the roof	270
7.2.1.3	Shading the walls	271
7.2.2	Roof treatment	271
7.2.3	Reducing conduction heat-transfer through roof/walls	272
7.2.3.1	Thermal insulation	272
7.2.3.2	Air cavities in the roof/walls	280
7.2.4	Use of paints/radiative cooling	281
7.2.5	Ventilation	286
7.3	Performance of Passive Heating and Cooling Concepts	287
7.3.1	Roof-pond/skytherm	287
7.3.2	Vary therm wall	292
7.3.3	Roof radiation trap system	293
7.3.4	Earth-air tunnel system	293
7.4	Performance of Building Forms	293
REFERENCES		297
CHAPTER 8 EVAPORATIVE COOLING AND EARTH COOLING SYSTEMS		
8.1	Evaporative Cooling	299

8.1.1	Historical background	299
8.1.2	Basic principle and classification	300
8.1.3	Climatic conditions for evaporative cooling	302
8.1.4	Direct-type evaporative coolers	302
8.1.4.1	Drip-type evaporative coolers	302
8.1.4.2	Spray-type evaporative coolers	304
8.1.4.3	Rotary pad evaporative coolers	305
8.1.4.4	Problems of direct-type coolers	306
8.1.5	Indirect-type evaporative coolers	307
8.1.5.1	Simple dry-surface cooling system	307
8.1.5.2	Regenerative dry-surface cooling system	308
8.1.5.3	Plate-type heat exchanger cooling systems	308
8.1.5.4	Pennington heat-storage wheel system	308
8.1.5.5	Advantages and problems of indirect evaporative cooling	310
8.1.6	Two-stage evaporative cooling systems	311
8.1.7	Indirect evaporative cooling: passive methods	312
8.1.7.1	Experience	312
8.1.7.2	Mathematical formulation	317
8.1.7.3	Experimental validation of the model	324
8.1.7.4	Comparison of evaporative cooling techniques, water film, roof pond and moving water film	326
8.1.7.5	Realization of the water film concept	327
8.2	Earth Cooling	331
8.2.1	Undistributed temperature distribution of ground	331
8.2.1.1	Analytical model	332
8.2.1.2	Discussion of the model	333
8.3	Earth-Air Tunnel System	333
8.3.1	Experience	335
8.3.1.1	In United States of America	335
8.3.1.2	In India	338
8.3.2	Thermal modelling of earth-air tunnel system	338
8.3.2.1	Simplified model	338
8.3.2.2	Transient model	342
8.3.2.3	Rigorous model	349
8.3.3	Conclusions	354
	REFERENCES	356
CHAPTER 9 RULES OF THUMB: DESIGN PATTERNS		
9.1	Building Location and Orientation	361
9.2	Clustering	362
9.3	Envelope Design	362

9.3.1	Building shape and orientation	362
9.3.2	North side	363
9.3.3	Protected entrance	363
9.3.4	Window location	363
9.3.5	Shading	364
9.3.6	Insulation	364
9.3.7	Exterior surface colour	364
9.3.8	Infiltration reduction	365
9.4	Location of Indoor Spaces	366
9.4.1	Systems choice	366
9.4.2	Appropriate materials	369
9.4.3	Sizing solar windows	369
9.4.4	Clerestories and skylights	370
9.4.5	Heat storage masonry	370
9.4.6	Water wall	370
9.4.6.1	Sizing the wall	371
9.4.6.2	Wall details	371
9.4.7	Sizing the greenhouse	372
9.4.7.1	Greenhouse connection	373
9.4.8	Sizing the roof-pond	373
9.4.8.1	Roof-pond details	374
9.4.9	South-facing greenhouse	374
9.4.9.1	Greenhouse details	374
9.4.10	Combining systems	375
9.4.11	Cloudy day storage	375
9.4.12	Movable insulation	375
9.4.13	Reflectors	376
9.4.14	Shading devices	376
9.4.15	Daylighting	377
9.4.16	Summer cooling	378
9.4.17	Evaporative cooling	378
9.4.18	Earth-air tunnel system	379
9.5	Mechanical Equipment	379
9.5.1	Mechanical efficiency	379
9.5.2	Mechanical equipment controls	379
9.5.3	Ventilation	379
9.5.4	Domestic hot water	380

## CHAPTER 10 TYPICAL DESIGNS OF SOLAR PASSIVE BUILDINGS

10.1	Cold Climate	381
10.1.1	The Hodges residence	381

10.1.2 Warehouse: Direct gain and water wall storage	382
10.1.3 Unit one, first village: solarium and trombe wall	384
10.1.4 Dr. Hollinger building	386
10.1.5 Srinagar dispensary	387
10.2 Tropical Climate	392
10.2.1 Atascadero house: skytherm system	392
10.2.2 Hostel for research scholars: IIT Delhi	396
10.3 Arid Climate	398
10.4 Hot and Humid Climate	402
10.5 Typical European House:	
St. George's School	405
10.6 Conclusions	406
