CONTENTS

Acknowledgements

Part One: Microfoundations of International Trade

1. The Microeconomic Foundation of the Pure Theory of International Trade 3
1.1 The Neoclassical Theory of the Firm 3
1.1.1 Description of Technology 3
1.1.2 Profit Maximization 8
1.1.3 Technical Progress 15
1.2 Theory of Consumer Behaviour 17

2. A Two-sector Model of a Closed Economy 32
2.1 A Model of a Closed Economy 32
2.2 The Existence of an Equilibrium 35
2.3 Duality Relations in the Simple Closed Economy Model 44
2.4 A Digression: the Production Possibility Curve 53

Part Two: Theories of Comparative Advantage

3. A Model of Exchange and the Marshall–Lerner Stability Conditions 63
3.1 A Model of Exchange 63
3.1.1 Elasticity of the Offer Curve 67
3.1.2 Determination of International Equilibrium 69
3.2 The Marshall–Lerner Stability Conditions 71

4. The Ricardian Theory of Comparative Advantage 77
4.1 The Ricardian Model in a Closed Economy 77
4.2 The Determination of Autarky Equilibrium in the Ricardian Model 78
4.3 The Determination of International Equilibrium in the Ricardian System 82

5. The Heckscher–Ohlin Theory of Comparative Advantage and Factor-Price Equalization Theorem 93
5.1 On the Definition of Factor Abundance and Scarcity 93
5.2 A Demonstration of Production Bias 94

5.3 Identical Tastes and Autarky Equilibrium 96
5.4 Trade Equilibrium and the Heckscher–Ohlin Theorem 98
5.5 The Factor-Price Equilization Theorem 101
5.6 Many Factors and Many Commodities 102

Part Three: The Theory of Factor-Price Differentials

6. Factor-Price Differentials, the Shape of the Transformation Locus and the Relationship between Prices and Output Levels 107
6.1 An Open Economy Model with a Factor-Price Differential (Wage Differential) 108
6.2 Factor Intensities, Factor Prices and Commodity Prices in the Presence of the Wage Differential 110
6.3 Shrinkage and the Shape of the Production Possibility Locus 115
6.4 The Relationship Between Changes in the Relative Prices and Output Levels 118
6.5 The Shape of the Production Possibility Curve 122

7. Theorems on Gains from Trade and Factor-Price Differentials 126
7.1 Free Trade versus No Trade 127
7.2 Terms of Trade and Welfare 135
7.3 Higher versus Lower Tariff 139

8. Factor-Price Differentials, Economic Expansion, Terms of Trade and Welfare at Constant and Variable Prices 144
8.1 Technical Progress 144
8.2 Technical Progress, Factor Intensities, Factor Prices, and Output Levels 145
8.3 Factor Accumulation and Output Levels 151
8.4 Economic Expansion and Welfare at Constant Terms of Trade 152
8.5 Technical Progress and Terms of Trade 158
8.6 Factor Accumulation and Terms of Trade 163
8.7 Economic Expansion and Real Income with Variable Terms of Trade 165

Part Four: Unemployment in Models of International Trade

9. Uniform Real Minimum Wage Rate, Unemployment

and Theory of Trade 175
9.1 The Two-sector Model with a Uniform Minimum Real Wage 175
9.2 The Production Possibility Curve in the Minimum Wage Economy 177
9.3 Consumption Equilibrium and the Offer Curve in the Minimum Wage Economy 185
9.4 Free Trade versus No Trade 187
9.5 The Formalization of the Minimum Wage Economy 188

10. Sector-specific Minimum Wages, Urban Unemployment and Optimal Commercial Policy in a Small Open Economy 193
10.1 The Model with the Harris–Todaro Minimum Wage 193
10.2 A Geometric Exposition of the Existence of Urban Unemployment in the Harris–Todaro Model 196
10.3 The Derivation of the Production Possibility Curve in the Harris–Todaro Model 197
10.4 Policy of Laissez-faire 199
10.5 Wage Subsidy in Manufacturing 200
10.6 Production Subsidy to Agriculture 203
10.7 Uniform Wage Subsidy (Optimal Policy Intervention) 206

Part Five: Non-traded and Intermediate Goods and the Theory of Trade

11. A Simple Geometrical Treatment of Non-traded Goods in the Pure Theory of International Trade 213
11.1 The Model 214
11.2 A Four-quadrant Diagram and the Determination of Equilibrium with Non-traded Goods 216
11.3 The Derivation of the Offer Curve with Non-traded Goods 220
11.4 Free Trade versus No Trade 222
11.5 Terms of Trade and Welfare 225
11.6 Economic Expansion, Output Levels and Welfare 226
11.7 A Result on Immiserizing Growth 230

12. Intermediate Goods: An Introduction to Traded Intermediate Goods in the Theory of Trade via Simple Geometry 235
12.1 The Model 236
12.2 A Geometric Representation of the Model 238
12.3 Free Trade versus No Trade 240
12.3.1 Free Trade versus No Trade in the Presence of an Imported Intermediate Good but No Imports of the Final Good 241
12.3.2 Free Trade versus No Trade in the Presence of an Imported Intermediate Good and Imports of the Final Good 244
12.4 Tariff Equilibrium and the Impact of a Change in the Price of the Imported Intermediate Good on Welfare 245
12.5 Factor Accumulation and Welfare in the Presence of a Tariff 249
12.6 The Effective Rate of Protection 250

Part Six: Tariffs, Quotas and Tariff-related Activities

13. Nominal Tariffs and Trade Equilibrium 259
13.1 A Framework for Tariff Analysis 259
13.2 Tariffs and the Terms of Trade 261
13.3 Tariffs, The Domestic-Price Ratio and the Metzler Paradox 263
13.4 Distribution of Income and Tariffs 267
13.5 The Optimum Tariff 268
13.6 The Lerner Symmetry Theorem 270

14. Tariffs, Variable Terms of Trade and Immiserizing Growth 273
14.1 A General Expression for Immiserizing Growth in the Case of Monopoly Power in Trade 273
14.2 Tariffs in the Small Country Case and Immiserizing Growth: Johnson Case 277

Part Seven: Trade Models with Specific Factors and Colonialism

15. On Factor Specificity and Trade Theory 283
15.1 The Jones Model with Sector Specificity 284
15.2 The Jones Result on Commodity Price: Factor-Price Relationship 285

15.3 Factor-Endowment–Output Results in the Jones Model 286
16. Sector Specificity of Foreign-owned Capital and Colonialism 290
16.1 The Hazari–Pattanaik Model of Foreign Ownership of Capital and Sector Specificity 291
16.2 Changes in the Degree of Distortion and Welfare 293
16.3 Terms of Trade, Factor Rewards and Welfare 296
16.4 Hazari–Pattanaik Results on Immiserizing Growth and Deindustrialization 300
16.5 Hicks-neutral Technical Progress and the Hazari–Pattanaik Result on Immiserizing Growth 304

Part Eight: Dynamic Models of Closed and Open Economies

17. A Two-sector Growth Model of a Closed Economy with Fixed Coefficients 311
17.1 A Two-sector Model with Fixed Coefficients 312
17.2 Short-run (Momentary) Equilibrium 315
17.3 Growth 323
18. A Two-sector Growth Model of an Open Economy 330
18.1 A Growth Model of a Closed Economy 330
18.2 Long-run Equilibrium 333
18.3 An Open-economy Model 334
18.4 Excess Demand 336
18.5 Short-run Equilibrium in the Open Economy 340
18.6 Specialization and Factor Endowments 342
18.7 Pattern of Trade, International Specialization and Capital Accumulation 345
Appendix 1. On the Long-run Growth Effects of a Minimum Wage for a Two-sector Economy *Pasquale M. Sgro and Akira Takayama* 352
I. Introduction 352
II. Economic Growth under a Minimum Wage 353
III. A Further Analysis 357
Appendix 2. Selected References on Other Topics 363
Index 364
