CONTENTS

Preface	xv
Acknowledgments	xvii
1. Spectroscopic Methods for Matrix Characterization	1
1.1 Introduction	1
1.2 Total Protein	2
1.2.1 Lowry Method	3
1.2.2 Smith (BCA) Method	3
1.2.3 Bradford Method	4
1.2.4 Ninhydrin-Based Assay	5
1.2.5 Other Protein Quantitation Methods	5
1.3 Total DNA	7
1.3.1 Diaminobenzoic Acid Method	7
1.3.2 Diphenylamine Method	9
1.3.3 Other Fluorometric Methods	9
1.4 Total RNA	10
1.5 Total Carbohydrate	11
1.5.1 Ferricyanide Method	11
1.5.2 Phenol-Sulfuric Acid Method	11
1.5.3 2-Aminothiophenol Method	12
1.5.4 Purpald Assay for Bacterial Polysaccharides	12
1.6 Free Fatty Acids	13
References	14
Problems	15
2. Enzymes	16
2.1 Introduction	16
2.2 Enzyme Nomenclature	17
2.3 Enzyme Commission Numbers	18
2.4 Enzymes in Bioanalytical Chemistry	19
2.5 Enzyme Kinetics	21
2.5.1 Simple One-Substrate Enzyme Kinetics	23
2.5.2 Experimental Determination of Michaelis-Menten Parameters	24

2.5.2.1	Eadie–Hofstee Method	25
2.5.2.2	Hanes Method	25
2.5.2.3	Lineweaver–Burk Method	26
2.5.2.4	Cornish–Bowden–Eisenthal Method	27
2.5.3	Comparison of Methods for the Determination of K_m Values	28
2.5.4	One-Substrate, Two-Product Enzyme Kinetics	29
2.5.5	Two-Substrate Enzyme Kinetics	29
2.5.6	Examples of Enzyme-Catalyzed Reactions and Their Treatment	31
2.6	Enzyme Activators	32
2.7	Enzyme Inhibitors	33
2.7.1	Competitive Inhibition	34
2.7.2	Noncompetitive Inhibition	35
2.7.3	Uncompetitive Inhibition	35
2.8	Enzyme Units and Concentrations	36
	Suggested References	38
	References	38
	Problems	38
3.	Quantitation of Enzymes and Their Substrates	41
3.1	Introduction	41
3.2	Substrate Depletion or Product Accumulation	42
3.3	Direct and Coupled Measurements	43
3.4	Classification of Methods	45
3.5	Instrumental Methods	47
3.5.1	Optical Detection	47
3.5.1.1	Absorbance	47
3.5.1.2	Fluorescence	49
3.5.1.3	Luminescence	51
3.5.1.4	Nephelometry	53
3.5.2	Electrochemical Detection	53
3.5.2.1	Amperometry	53
3.5.2.2	Potentiometry	54
3.5.2.3	Conductimetry	54
3.5.3	Other Detection Methods	55
3.5.3.1	Radiochemical	55
3.5.3.2	Manometry	55
3.5.3.3	Calorimetry	56
3.6	Ultra-High-Throughput Assays (HTA)	56
3.7	Practical Considerations for Enzymatic Assays	57
	Suggested References	57

References	57
Problems	58
4. Immobilized Enzymes	61
4.1 Introduction	61
4.2 Immobilization Methods	61
4.2.1 Nonpolymerizing Covalent Immobilization	62
4.2.1.1 Controlled-Pore Glass	63
4.2.1.2 Polysaccharides	64
4.2.1.3 Polyacrylamide	65
4.2.1.4 Acidic Supports	66
4.2.1.5 Anhydride Groups	67
4.2.1.6 Thiol Groups	67
4.2.2 Cross-Linking with Bifunctional Reagents	68
4.2.3 Adsorption	69
4.2.4 Entrapment	69
4.2.5 Microencapsulation	70
4.3 Properties of Immobilized Enzymes	71
4.4 Immobilized Enzyme Reactors	76
4.5 Theoretical Treatment of Packed-Bed Enzyme Reactors	79
Suggested References	82
References	82
Problems	83
5. Antibodies	86
5.1 Introduction	86
5.2 Structural and Functional Properties of Antibodies	87
5.3 Polyclonal and Monoclonal Antibodies	90
5.4 Antibody–Antigen Interactions	91
5.5 Analytical Applications of Secondary Antibody–Antigen Interactions	93
5.5.1 Agglutination Reactions	93
5.5.2 Precipitation Reactions	94
Suggested References	97
References	97
Problems	98
6. Quantitative Immunoassays with Labels	99
6.1 Introduction	99
6.2 Labeling Reactions	101
6.3 Heterogeneous Immunoassays	102

6.3.1	Labeled-Antibody Methods	104
6.3.2	Labeled-Ligand Assays	104
6.3.3	Radioisotopes	106
6.3.4	Fluorophores	107
6.3.4.1	Indirect Fluorescence	108
6.3.4.2	Competitive Fluorescence	108
6.3.4.3	Sandwich Fluorescence	108
6.3.4.4	Fluorescence Excitation Transfer	108
6.3.4.5	Time-Resolved Fluorescence	109
6.3.5	Chemiluminescent Labels	110
6.3.6	Enzyme Labels	112
6.4	Homogeneous Immunoassays	116
6.4.1	Fluorescent Labels	116
6.4.1.1	Enhancement Fluorescence	116
6.4.1.2	Direct Quenching Fluorescence	116
6.4.1.3	Indirect Quenching Fluorescence	117
6.4.1.4	Fluorescence Polarization Immunoassay	117
6.4.1.5	Fluorescence Excitation Transfer	118
6.4.2	Enzyme Labels	118
6.4.2.1	Enzyme-Multiplied Immunoassay Technique	118
6.4.2.2	Substrate-Labeled Fluorescein Immunoassay	119
6.4.2.3	Apoenzyme Reactivation Immunoassay (ARIS)	119
6.4.2.4	Cloned Enzyme Donor Immunoassay	120
6.4.2.5	Enzyme Inhibitory Homogeneous Immunoassay	120
6.5	Evaluation of New Immunoassay Methods	121
	Suggested References	126
	References	126
	Problems	127
7.	Biosensors	131
7.1	Introduction	131
7.2	Response of Enzyme-Based Biosensors	132
7.3	Examples of Biosensor Configurations	135
7.3.1	Ferrocene-Mediated Amperometric Glucose Sensor	135
7.3.2	Potentiometric Biosensor for Phenyl Acetate	137
7.3.3	Potentiometric Immunosensor for Digoxin	138
7.3.4	Evanescent-Wave Fluorescence Biosensor for Bungarotoxin	139
7.3.5	Optical Biosensor for Glucose Based on Fluorescence Energy Transfer	141
7.3.6	Piezoelectric Sensor for Nucleic Acid Detection	142
7.3.7	Enzyme Thermistors	144

7.4 Evaluation of Biosensor Performance	145
Suggested References	147
References	147
Problems	148
8. Directed Evolution for the Design of Macromolecular Bioassay Reagents	150
8.1 Introduction	150
8.2 Rational Design and Directed Evolution	152
8.3 Generation of Genetic Diversity	154
8.3.1 Polymerase Chain Reaction and Error-Prone PCR	155
8.3.2 DNA Shuffling	157
8.4 Linking Genotype and Phenotype	158
8.4.1 Cell Expression and Cell Surface Display (<i>in vivo</i>)	158
8.4.2 Phage Display (<i>in vivo</i>)	159
8.4.3 Ribosome Display (<i>in vitro</i>)	160
8.4.4 mRNA-Peptide Fusion (<i>in vitro</i>)	160
8.4.5 Microcompartmentalization (<i>in vitro</i>)	160
8.5 Identification and Selection of Successful Variants	161
8.5.1 Identification of Successful Variants Based on Binding Properties	162
8.5.2 Identification of Successful Variants Based on Catalytic Activity	163
8.6 Directed Evolution of Galactose Oxidase	164
Suggested References	165
References	165
Problems	166
9. Principles of Electrophoresis	167
9.1 Introduction	167
9.2 Electrophoretic Support Media	171
9.2.1 Paper	171
9.2.2 Starch Gels	172
9.2.3 Polyacrylamide Gels	173
9.2.4 Agarose Gels	177
9.2.5 Polyacrylamide–Agarose Gels	177
9.3 Effect of Experimental Conditions on Electrophoretic Separations	177
9.4 Electric Field Strength Gradients	178
9.5 Detection of Proteins and Nucleic Acids After Electrophoretic Separation	180
9.5.1 Stains and Dyes	181

9.5.2	Detection of Enzymes by Substrate Staining	183
9.5.3	The Southern Blot	184
9.5.4	The Northern Blot	184
9.5.5	The Western Blot	185
9.5.6	Detection of DNA Fragments on Membranes with DNA Probes	185
	Suggested References	188
	References	188
	Problems	189
10.	Applications of Zone Electrophoresis	191
10.1	Introduction	191
10.2	Determination of Protein Net Charge and Molecular Weight Using PAGE	191
10.3	Determination of Protein Subunit Composition and Subunit Molecular Weights	193
10.4	Molecular Weight of DNA by Agarose Gel Electrophoresis	195
10.5	Identification of Isoenzymes	196
10.6	Diagnosis of Genetic (Inherited) Disease	197
10.7	DNA Fingerprinting and Restriction Fragment Length Polymorphism	199
10.8	DNA Sequencing with the Maxam–Gilbert Method	202
10.9	Immunoelectrophoresis	206
	Suggested References	210
	References	211
	Problems	211
11.	Isoelectric Focusing	213
11.1	Introduction	213
11.2	Carrier Ampholytes	214
11.3	Modern IEF with Carrier Ampholytes	216
11.4	Immobilized pH Gradients (IPGs)	219
11.5	Two-Dimensional Electrophoresis	222
	Suggested References	224
	References	225
	Problems	225
12.	Capillary Electrophoresis	227
12.1	Introduction	227
12.2	Electroosmosis	229
12.3	Elution of Sample Components	229
12.4	Sample Introduction	230

12.5	Detectors for Capillary Electrophoresis	231
12.5.1	Laser-Induced Fluorescence Detection	232
12.5.2	Mass Spectrometric Detection	235
12.5.3	Amperometric Detection	236
12.5.4	Radiochemical Detection	239
12.6	Capillary Polyacrylamide Gel Electrophoresis (C-PAGE)	240
12.7	Capillary Isoelectric Focusing (CIEF)	242
	Suggested References	244
	References	244
	Problems	244
13.	Centrifugation Methods	247
13.1	Introduction	247
13.2	Sedimentation and Relative Centrifugal g Force	247
13.3	Centrifugal Forces in Different Rotor Types	249
13.3.1	Swinging-Bucket Rotors	249
13.3.2	Fixed-Angle Rotors	250
13.3.3	Vertical Rotors	250
13.4	Clearing Factor (k)	251
13.5	Density Gradients	252
13.5.1	Materials Used to Generate a Gradient	252
13.5.2	Constructing Pre-Formed and Self-Generated Gradients	253
13.5.3	Redistribution of the Gradient in Fixed-Angle and Vertical Rotors	254
13.6	Types of Centrifugation Techniques	255
13.6.1	Differential Centrifugation	255
13.6.2	Rate-Zonal Centrifugation	256
13.6.3	Isopycnic Centrifugation	257
13.7	Harvesting Samples	257
13.8	Analytical Ultracentrifugation	257
13.8.1	Instrumentation	258
13.8.2	Sedimentation Velocity Analysis	259
13.8.3	Sedimentation Equilibrium Analysis	262
13.9	Selected Examples	263
13.9.1	Analytical Ultracentrifugation for Quaternary Structure Elucidation	263
13.9.2	Isolation of Retroviruses by Self-Generated Gradients	264
13.9.3	Isolation of Lipoproteins from Human Plasma	264
	Suggested References	265
	References	265
	Problems	266

14. Chromatography of Biomolecules	268
14.1 Introduction	268
14.2 Units and Definitions	268
14.3 Plate Theory of Chromatography	269
14.4 Rate Theory of Chromatography	270
14.5 Size Exclusion (Gel Filtration) Chromatography	272
14.6 Gel Matrices for Size Exclusion Chromatography	277
14.7 Affinity Chromatography	278
14.7.1 Immobilization of Affinity Ligands	280
14.7.2 Elution Methods	281
14.7.3 Determination of Association Constants by High-Performance Affinity Chromatography	283
14.8 Ion-Exchange Chromatography	286
14.8.1 Retention Model for Ion-Exchange Chromatography of Polyelectrolytes	288
Suggested References	292
References	293
Problems	293
15. Mass Spectrometry of Biomolecules	295
15.1 Introduction	295
15.2 Basic Description of the Instrumentation	297
15.2.1 Soft Ionization Sources	297
15.2.1.1 Fast Atom-Ion Bombardment	297
15.2.1.2 Electrospray Ionization	299
15.2.1.3 Matrix-Assisted Laser Desorption/Ionization	299
15.2.2 Mass Analyzers	300
15.2.3 Detectors	303
15.3 Interpretation of Mass Spectra	304
15.4 Biomolecule Molecular Weight Determination	308
15.5 Protein Identification	310
15.6 Protein–Peptide Sequencing	312
15.7 Nucleic Acid Applications	315
15.8 Bacterial Mass Spectrometry	318
Suggested References	318
References	319
Problems	320
16. Validation of New Bioanalytical Methods	322
16.1 Introduction	322
16.2 Precision and Accuracy	323

16.3	Mean and Variance	324
16.4	Relative Standard Deviation and Other Precision Estimators	325
16.4.1	Distribution of Errors and Confidence Limits	325
16.4.2	Linear Regression and Calibration	326
16.4.3	Precision Profiles	328
16.4.4	Limit of Quantitation and Detection	329
16.4.5	Linearizing Sigmoidal Curves (Four-Parameter Log-Logit Model)	329
16.4.6	Effective Dose Method	331
16.5	Estimation of Accuracy	332
16.5.1	Standardization	333
16.5.2	Matrix Effects	333
	16.5.2.1 Recovery	333
	16.5.2.2 Parallelism	333
16.5.3	Interferences	334
16.6	Qualitative (Screening) Assays	335
16.6.1	Figures of Merit for Qualitative (Screening) Assays	335
16.7	Examples of Validation Procedures	336
16.7.1	Validation of a Qualitative Antibiotic Susceptibility Test	336
16.7.2	Measurement of Plasma Homocysteine by Fluorescence Polarization Immunoassay (FPIA) Methodology	337
16.7.3	Determination of Enzymatic Activity of β -Galactosidase	340
16.7.4	Establishment of a Cutoff Value for Semi-Quantitative Assays for Cannabinoids	342
	Suggested References	344
	References	345
	Answers to Problems	346
