Introduction to the Series	xiii
Acknowledgements	xiv
Foreword by W. Leontief	xv
1 Input-output analysis: an introduction	1
M. Ciaschini	
PART ONE Problem definition: data sources and modelling outcomes	17
2 Homogeneity of price development within commodity groups and by demand components	19
J. V. Skolka	
3 Important input coefficients in market transaction tables and production flow tables	43
J. Schintke and R. Stäglin	
4 Government production in ESA and SNA tables	61
L. Malfi	
5 The use of a social accounting matrix for comparative static equilibrium modelling	75
C. Lager	
6 Positive solutions for the Leontief dynamic input-output model	91
D. B. Szyld, L. Moledo and B. Sauber	
7 Demand versus supply determinants of disproportional growth in open economies	99
M. A. Landesmann	

8	Analysing structural change in the economy F. Duchin	113
9	Turnpike stability of decomposable systems and the efficiency of growth planning T. Washida	129
PART TWO Topics in economics: inflation, productivity and demands		147
10	Cumulative inflation and dynamic input–output modelling M. De Clementi, M. Morciano, A. Orlandi and R. Perrella	149
11	Productivity growth and technical change M. Seyfried	167
12	Intra-industry trade in the manufacturing industries of Japan T. Koshiha	179
13	Energy intensities, input–output analysis and economic development J. L. R. Proops	201
14	How to observe a Leontief paradox – and how not to A. S. Jakobsen	217
15	Investment coefficient matrix in dynamic input–output models: an analysis and prognosis K. Cichocki and W. Wojciechowski	231
16	Consumption turnpike in a non-linear model of the input–output type E. Panek	253
PART THREE National and regional level: the macroeconomic, multisectorial and multiregional framework		261
17	The use of impact tables for policy applications of input–output models P. Sand	263
18	Growth and changes in the structure of the Finnish economy in the 1960s and 1970s O. Forssell	287
