<i>List of figures</i>	page xiii
<i>List of economic models and tables</i>	xv
<i>Preface</i>	xvii

Part I: Introduction to welfare economics

1 Measuring changes in economic welfare: consumer and producer surplus	3
1.1 Consumer and producer surplus	4
1.2 A cost-benefit approach to policy analysis: some examples	7
1.3 Calculating the surpluses	17
1.4 Outstanding problems	18
2 Consumers and producers: some basic theory	21
2.1 Consumer optimisation and demand functions	21
2.2 The measurement of consumer surplus	26
2.3 The firm in the long run	31
2.4 The short run and the meaning of producer surplus	35
2.5 Conclusion	36
Appendix: properties of the expenditure function	37
3 Welfare change in general equilibrium	40
3.1 Adding consumer surpluses	42
3.2 A model of general equilibrium	44
3.3 Measures of welfare change in general equilibrium	48
3.4 Welfare change with perfectly competitive markets	51
3.5 Welfare change in a tax-distorted economy	53
3.6 Partial and general equilibrium measures	56

	Appendix: conditions for path independence when adding consumer surpluses	57
4	Equity and efficiency	59
4.1	Pareto efficiency and Pareto improvements	60
4.2	Relative utilities and social welfare	65
4.3	The Bergson–Samuelson social welfare function	68
4.4	Social welfare functions and individual choice	73
4.5	Equity and efficiency: a trade-off?	74
4.6	Conclusion	77
Part II: Project and policy appraisal in developing countries		
5	Project appraisal: an overview	81
5.1	Project appraisal in developing countries	81
5.2	Welfare objectives	85
5.3	Social and private approaches to investment appraisal	87
5.4	Control variables and shadow prices	88
5.5	Optimum and sub-optimum in cost-benefit analysis	90
5.6	Investment criteria	92
6	Shadow prices for traded and non-traded commodities in an open economy	97
6.1	Border prices and foreign exchange equivalence	98
6.2	Shadow prices in a fixed-price model	101
6.3	Shadow prices in a flexible-price model	106
6.4	Project appraisal rule – or rules?	110
	Appendix: the derivation of shadow prices	112
7	Trade policy, exchange rates and structural adjustment	117
7.1	A three-commodity model	118
7.2	Tariff reform: efficiency aspects	119
7.3	Tariff reform: distribution aspects	123
7.4	The effective rate of protection	125
7.5	The shadow exchange rate	128
7.6	Conclusion	131
	Appendix: formal analysis of the shadow exchange rate	132
8	Labour markets in developing countries	137
8.1	Employment decisions in a rural household model	138

Contents	xi
8.2 Competitive rural labour markets	143
8.3 Modern sector wage rates	145
8.4 Links between formal and traditional sectors	147
9 The social value of labour	150
9.1 The dual economy	151
9.2 Migration and the shadow wage rate	152
9.3 The use of distribution weights	157
9.4 The shadow wage rate in a tax-distorted open economy	161
9.5 Conclusion	164
10 Intertemporal costs and benefits (1): a market-based approach	167
10.1 The consumption rate of interest for an individual household	168
10.2 The consumption rate of interest: social aspects	172
10.3 The value of investment in a competitive economy	173
10.4 A two-period model with a tax distortion	178
Appendix: derivation of the Harberger formula	183
11 Intertemporal costs and benefits (2): a social planning approach	185
11.1 A two-period model with a fixed-savings ratio	186
11.2 The shadow price of investment and the n -period model	189
11.3 Discount rates for project appraisal	192
Appendix: geometric series and the Little–Mirrlees discount rate	194

Part III: Missing markets

12 Externalities and public goods	199
12.1 Externalities and inefficiency	200
12.2 Public goods	203
12.3 Private solutions to externality problems	204
12.4 Public policy and externalities: theoretical aspects	209
12.5 The valuation of non-marketed goods	214
12.6 Equity and efficiency in the provision of public goods	216

13 Risk and the measurement of welfare change	219
13.1 Welfare measures in a risky environment	220
13.2 Competitive insurance markets	225
13.3 Risk with incomplete insurance markets	228
13.4 The public sector and risk	231
13.5 Commodity price stabilisation	233
13.6 Conclusion	238
Appendix: Taylor series expansions and measures of risk	238
14 Natural resources and the environment	241
14.1 Non-renewable resources	242
14.2 Renewable resources	247
14.3 Option values and irreversibility	254
14.4 Sustainable development and cost-benefit analysis	259
Retrospect	263
<i>Bibliography</i>	268
<i>Index</i>	278

Figures

1.1	Consumer surplus	page 5
1.2	Producer surplus	6
1.3	Technological change	9
1.4	A tax	10
1.5	A subsidy	11
1.6	The benefit from a road improvement	12
1.7	Private and social costs	14
1.8	Commodity price stabilisation	15
1.9	Willingness-to-pay	18
2.1	Consumer optimisation	23
2.2	Income expansion paths	27
2.3	A fall in the price of C_1	28
2.4	Compensating and equivalent variation	29
2.5	Cost minimisation	32
2.6	Long-run supply	34
2.7	The VMP curve	35
2.8	Competitive supply	36
3.1	Path dependency	43
3.2	Equilibrium in product and factor markets	45
3.3	Welfare change in general equilibrium	50
4.1	Efficiency in consumption	62
4.2	Efficiency in production	63
4.3	Overall Pareto efficiency	64
4.4	Utility possibility curves	66
4.5	The Scitovsky paradox	67
4.6	The Bergson–Samuelson welfare function	69
4.7	Welfare functions	70
4.8	Net benefits with and without distribution weights	76
5.1	NPV and IRR	94
5.2	Criteria for ranking projects: NPV or IRR?	95

6.1	Harberger weighted-average formula	107
7.1	Tariff reform	120
8.1	The autarchic household	139
8.2	The competitive rural labour market	144
8.3	Efficiency wage	146
10.1	Intertemporal preferences	171
10.2	Intertemporal production possibilities	174
10.3	The competitive model	175
10.4	Growth in the neoclassical model	177
12.1	A Pareto efficient market	201
12.2	Pareto inefficiency from an externality	202
12.3	Private and social optima	206
12.4	The Coase theorem	206
12.5	Willingness-to-pay for a public good	212
13.1	Risk and variance	221
13.2	A mean-preserving spread decrease in risk	221
13.3	Attitudes to risk	222
13.4	The cost of risk-bearing	223
13.5	Commodity stabilisation policy	236
14.1	Allocation of a fixed resource stock over time	243
14.2	Consumer and producer surplus	245
14.3	Future net benefits as an externality	246
14.4	Rate of growth of the fish population	248
14.5	Steady-state harvests	249
14.6	Revenue and fishing effort	253
14.7	Compensating variation	255
14.8	Option value	256

Economic models and tables

Economic models

3.1	A two-sector general equilibrium model	<i>page</i> 48
3.2	A general equilibrium model of a tax-distorted economy	55
6.1	A fixed-price model	103
6.2	A flexible-price model	108
7.1	A three-commodity model of structural adjustment	119
7.2	A model with a taxed traded input	127
8.1	The rural household model	141
9.1	A partial equilibrium dual economy model	154
9.2	A dual economy model with trade distortions	162
10.1	A model of investment in a tax-distorted economy	181
11.1	A model of investment in a fixed-savings ratio model	187
12.1	A model with a public good	210
12.2	A model of pollution	213

Tables

4.1	Distribution weights derived from the iso-elastic function	71
4.2	Ranking with ordinal preferences	73
4.3	Unweighted project benefits	75
4.4	Weighted project benefits	75
11.1	Growth of the capital stock	190
12.1	The free-rider problem	209
13.1	A project with an uncertain outcome	229
14.1	Investment with uncertainty	257
