Contents

Preface, xi

Acknowledgments, xiii

CHAPTER 1 □ The Fundamentals, 1

Introduction, 1

Common Sense in Dealing with RNA, 1

Purification Methods and When to Use Them, 5

Recovering Purified RNA: Guidelines for Precipitation, 6

Resuspending Pelleted RNA, 8

Assessing the Quantity and Quality of Isolated RNA after Purification, 8

Removing Ribosomal RNAs, 9

Enrichment of mRNA Using Oligo(dT) Cellulose, 10

Enriching for Species of RNA Other Than mRNAs, 10

Miscellaneous (but Important) General Items, 11

Summary, 14

CHAPTER 2 □ Purification of RNA from Natural Sources, 17

Overview, 17

Protocols

1 SDS Solubilization and Phenol Extraction, 19

2 Purification of RNA Using TRIzol (TRI Reagent), 23

3 Ethanol Precipitation of RNA and the Use of Carriers, 27

4 Guidelines for the Use of RNA Purification Kits, 30

5 Preparation of Cytoplasmic and Nuclear RNA from Tissue Culture Cells, 33

6 Removal of Ribosomal Subunits (and rRNA) from Cytoplasmic Extracts before Solubilization with SDS and Deproteinization, 36

7 Isolation of Total RNA from Yeast Cell Cultures, 38

Method 1: Vegetative Cells, 38

Method 2: Meiotic Cells, 40

8 Bacterial RNA Isolation (*E. coli*), 44

- 9 Removing rRNA from Deproteinized, Phenol-extracted Total RNA, 48
 - Method 1: Enzymatic Digestion of rRNA, 48
 - Method 2: Selective Precipitation of Large RNAs with LiCl or PEG/NaCl, 49
 - Method 3: Removal of rRNA by Hybrid Selection, 51
- 10 Enrichment of Poly(A)⁺ mRNA Using Immobilized Oligo(dT), 53
- 11 Removal of DNA from RNA, 56
- 12 Gel Electrophoresis, 58
 - Method 1: Polyacrylamide Gel Electrophoresis, 58
 - Method 2: Agarose Gel Electrophoresis (Nondenaturing), 63
- 13 Determining the Yield and Quality of Purified RNA, 67

CHAPTER 3 □ Detection and Characterization of Specific RNAs, 75

- Overview, 75
- Probe Preparation, 75
- Northern Blotting, 77
- Nuclease Protection, 78
- Primer Extension, 78
- Other Methods, 80
- PCR-based Approaches, 80
- Specialized Methods for Detecting Small RNAs, 86
- Protocols
 - 1 Labeling of Oligonucleotide Probes (DNA, LNA, RNA) by Polynucleotide Kinase and [γ -³²P]ATP, 89
 - 2 DNA Oligonucleotide Radiolabeling by Terminal Deoxynucleotidyl Transferase (TdT), 92
 - 3 Asymmetric Polymerase Chain Reaction to Generate Single-stranded Probes, 95
 - 4 Random Hexamer ³²P Radiolabeling of DNA Fragments as Hybridization Probes, 97
 - 5 Nick Translation of Double-stranded DNA for the Preparation of ³²P-Labeled Hybridization Probes, 100
 - 6 Enzymatic Dephosphorylation of RNA Using Calf Intestine Alkaline Phosphatase or Shrimp Alkaline Phosphatase, 103
 - 7 Northern Blots: Denaturation and Electrophoresis of RNA with Formaldehyde, 106
 - 8 Northern Blots: Denaturation and Electrophoresis of RNA with Glyoxal, 110
 - 9 Northern Blots: Capillary Transfer of RNA from Agarose Gels and Filter Hybridization Using Standard Stringency Hybridization Conditions, 114
 - 10 Northern Blots: Alternative Method for Processing Northern Blots after Capillary Transfer, 121
 - 11 Northern Blots for Small RNAs and MicroRNAs, 126
 - 12 RNase Protection Assay, 131
 - 13 Nuclease S1 Protection Mapping, 136
 - 14 Primer Extension Analysis of RNA, 141

- 15 Reverse Primer Extension, 145
- 16 Poisoned Primer Extension, 149
- 17 Detection of RNAs by 3'-end Labeling and RNase H Digestion, 152
- 18 Reverse Transcription-Polymerase Chain Reaction, 155
 - Method 1: Reverse Transcription (RT): cDNA Priming and Synthesis, 158
 - Method 2: Polymerase Chain Reaction and Detection of Products, 160
- 19 Basic Quantitative PCR Using Real-time Fluorescence Measurements, 165
- 20 5' Rapid Amplification of cDNA Ends, 171
- 21 3' Rapid Amplification of cDNA Ends, 180
- 22 RACE on Uncapped or Nonpolyadenylated RNAs, 186
- 23 RNA Sequencing by Primer Extension, 189
- 24 Direct Chemical Sequencing of End-labeled RNA, 192
- 25 Splinted Ligation Method to Detect Small RNAs, 200

CHAPTER 4 □ Synthesis, Purification Labeling, and Substitution of Transcripts Synthesized In Vitro, 205

Overview, 205

In Vitro Transcription: The Basics, 205

Yield of In Vitro-Transcribed RNAs, 205

Labeling of In Vitro-Synthesized RNAs, 207

Protocols

- 1 In Vitro Transcription of RNA: Synthesis, Labeling, and Substitution, 210
- 2 High-yield Synthesis of RNA Using T7 RNA Polymerase and Plasmid DNA or Oligonucleotide Templates, 216
- 3 Determining the Yield of RNA Synthesized In Vitro, 220
- 4 Gel Purification of RNA, 222
- 5 3'-End Labeling of RNA with [32 P]pCp and T4 RNA Ligase 1, 225
- 6 3'-End Labeling of RNA with Yeast Poly(A) Polymerase and 3'-Deoxyadenosine 5'-[α - 32 P]Triphosphate (Cordycepin 5'-[α - 32 P]Triphosphate, 228
- 7 5'-End Labeling of RNA with [γ - 32 P]ATP and T4 Polynucleotide Kinase, 231
- 8 Site-specific Labeling and Substitution of RNA, 234

CHAPTER 5 □ Detecting and Defining RNA-Protein and RNA-RNA Interactions, 241

Introduction, 241

General Methods for Detecting RNA-Protein Interactions, 241

RNA Structure Probing, 243

Mapping Sites of RNA-Protein Interactions, 244

Summary, 252

Protocols

- 1 Filter-binding Assay for Analysis of RNA–Protein Interactions, 254
- 2 Native Polyacrylamide-gel-electrophoresis-binding Assay for RNA–Protein Complexes: Gel Mobility Shift Assay or Electrophoretic Mobility Shift Assay, 257
- 3 SELEX to Identify Protein-binding Sites on RNA, 262
- 4 RNA Structure Determination Using Chemical and Nuclease Digestion Methods, 269
 - Method 1: RNA Structure Determination Using Chemical Methods, 269
 - Method 2: RNA Structure Determination Using Nuclease Digestion Methods, 273
- 5 Mapping Sites of RNA–Protein Interactions Using Chemical Methods, 276
- 6 Mapping Sites of RNA–Protein Interactions Using Nuclease-based Methods: RNase Footprinting and Reverse Footprinting, 284
 - Method 1: RNase Footprinting, 284
 - Method 2: Reverse Footprinting, 288
- 7 Modification Interference and Nucleotide Analog Interference Mapping, 291
 - Method 1: Chemical Modification Interference, 291
 - Method 2: Nucleotide Analog Interference Mapping, 294
- 8 Boundary Analysis, 298
- 9 Ultraviolet Photochemical Cross-linking to Detect RNA-binding Proteins, 301
- 10 Photocross-linking Using Uridine Analogs, 304
- 11 Detecting RNA–RNA Interactions Using Psoralen Derivatives, 307
- 12 Cross-linking with Formaldehyde, 311
- 13 Basic Affinity Selection Methods, 314
 - Method 1: Basic Selection with Beads, 314
 - Method 2: Selection with a Biotinylated Oligonucleotide, 316
 - Method 3: Selection of a Ribonucleoprotein Using a Complementary Biotinylated Oligonucleotide, 317

CHAPTER 6 □ Analysis of RNA-processing Reactions Using Cell-free Systems, 321

Introduction, 321

Guidelines for the Preparation of Active Cell-free Systems, 321

Guidelines for Testing and Optimizing Extracts, 322

Developing Cell-free Systems from Poorly Studied Organisms, 323

Protocols

- 1 Preparation of Nuclear Extracts from HeLa Cells, 325
- 2 Analysis of Pre-mRNA Splicing Using HeLa Cell Nuclear Extracts, 330
- 3 Preparation of *Drosophila* Kc Cell Nuclear Extracts for In Vitro Splicing, 334
- 4 In Vitro Splicing Reactions in *Drosophila* Kc Nuclear Extracts, 339
- 5 Preparation and Analysis of Cell-free Splicing Extracts from *Saccharomyces cerevisiae*, 343
- 6 Analysis of Splicing In Vitro Using Extracts of *Saccharomyces cerevisiae*, 348
- 7 Analysis of Splicing Complexes on Native Gels, 352

CHAPTER 7 □ RNA Interference, 355

Introduction, 355

RNAi: The Basics, 356

The Design of RNAi Experiments: General Considerations and Strategies, 357

RNAi with Long dsRNA, 359

Protocols

- 1 dsRNA-induced RNAi in *Drosophila* Cells by Soaking, 363
- 2 dsRNA-induced RNAi in *Drosophila* Cells by Transfection, 366
- 3 dsRNA-induced RNAi in *C. elegans* by Feeding with dsRNA-expressing *E. coli*, 370
- 4 RNAi in *C. elegans* by Injection of dsRNA, 374
- 5 RNAi in Cultured Mammalian Cells Using Synthetic siRNAs, 380
- 6 Construction of Transgenic *Drosophila* Expressing shRNAs in the miR-1 Backbone, 387
- 7 Creating an miR30-based shRNA Vector, 395
- 8 Packaging shRNA Retroviruses and Host Cell Infection, 399
- 9 Infection of Mammalian Cells with Retroviral shRNAs, 403
- 10 Creating Transgenic shRNA Mice by Recombinase-mediated Cassette Exchange, 407

CHAPTER 8 □ Genomic Approaches, 419

Overview, 419

Microarrays, 420

Sequencing of RNAs by High-throughout Methods, 424

Identifying RNAs Associated with Specific Proteins, 428

Analysis of Genomic Data, 431

Protocols

- 1 Preparation of Fluorescent-dye-labeled cDNA from RNA for Microarray Hybridization, 435
- 2 Microarray Slide Hybridization, 440
- 3 Scanning Microarray Slides, 446
- 4 Tips on Hybridizing, Washing, and Scanning Affymetrix Microarrays, 451
- 5 Fragmentation of Whole-transcriptome RNA Using *E. coli* RNase III, 457
- 6 Preparation of Small RNA Libraries for High-throughput Sequencing, 460
- 7 Large-scale Immunopurification of RNP Complexes from *Drosophila* Nucleoplasmic Extracts for Tiling Microarrays (RNA Immunoprecipitation Microarray; RIP-Chip), 471
- 8 CLIP (Cross-linking and Immunoprecipitation) Identification of RNAs Bound by a Specific Protein, 476
- 9 Preparation of mRNA-Seq Libraries from Poly(A)⁺ mRNA for Illumina Transcriptome High-throughput Sequencing, 491
- 10 Methods for Processing Microarray Data, 496
- 11 Methods for Processing High-throughput Sequencing Data, 503

APPENDICES

Common Recipes, 513

Quick Reference for Enzymes Commonly Used in RNA Research, 523

Protocols, 525

Protocols

- 1 RNA-friendly Plasmid Preparation, 526
- 2 Preparing Cellular DNA from Nuclei or Whole Cells, 532
- 3 Expression and Purification of Active Recombinant T7 RNA Polymerase from *E. coli*, 535
- 4 Preparing Size Markers for Gel Electrophoresis, 541
- 5 Toeprinting, 544
- 6 Cell Fractionation, 547
- 7 hnRNP-Enriched Nucleoplasmic Extracts from *Drosophila* or Mammalian Tissue Culture Cells, 548
- 8 Measuring the Length of Poly(A) Tails, 554
 - Method 1: Low-resolution Measurement of Poly(A) Tails Using Northern Blotting, 555
 - Method 2: High-resolution Measurement of Poly(A) Tails Using Northern Blotting, 555
 - Method 3: PCR-based and Ligation-mediated Approaches for Measuring Poly(A) Tail Length, 557

Cautions, 559

Index, 567
