

# Thinking About Biology

**Stephen Webster**

Science Communication Group  
Imperial College London

**CAMBRIDGE**  
UNIVERSITY PRESS

## *Contents*

*Acknowledgments* xi

*Introduction* 1

### **1 Facts? 5**

The problem with cannabis 5

The making of the cell theory 9

The edge of the amoeba 19

How cells evolved 24

The philosophy of science 31

### **2 Reductionism 38**

An introduction 38

Examples of reductionist research 42

The two faces of reductionism 44

The general problem of scientific explanation 47

Explanation through causation 50

Metaphysics and biology 52

A review of terminology 54

Anti-reductionist biology today 58

A case study: phenylketonuria (PKU) 61

In conclusion: the problem of determinism 64

### **3 Evolution 67**

A philosophical introduction 67

The work of Charles Darwin 69

The question of time 73

The case of Jacques Déprat 77

The myth of the coelacanth 81

- Life and the illusion of progress 85
- Proximate and ultimate causes in biology 89
- The concept of adaptation – and its teleology 91
- The scope of natural selection 95
- The ‘unit’ of natural selection 106
- The Darwin wars 107
- 4 Biology and animals 109**
  - Ethics in science: an introduction 109
  - Interventions: an introduction 114
  - Vivisection and dissection 116
  - Animal minds, human morals and the study of ethics 121
  - In conclusion 137
- 5 Controversies in biology 140**
  - Controversies in biology – and in the media 140
  - The crisis of ‘mad cow disease’ 142
  - Genetically modified crops 150
  - Xenotransplantation 156
- 6 Making sense of genes 163**
  - An introduction to the Human Genome Project 163
  - The philosophy of the Human Genome Project 166
  - The history of the Human Genome Project 170
  - Genetic testing: the case of Huntington’s disease 172
  - Testing for the ‘gene’ for breast cancer 175
  - The future of the Human Genome Project 178
  - The commercialisation of the genome 180
  - Gene testing and the doctor–patient relationship 182
- 7 Biology and politics 187**
  - How politics enters biology 187
  - The politics of Darwin 191
  - Eugenics: the genetic improvement of people 193
  - Measuring intelligence 196
  - Eugenics and genetics 198
  - Biology and the Nazis 202
  - The world view from evolutionary psychology 206

**8 Research ethics 210**

A conflict of interest 210

A code of conduct 212

Peer review 216

A historical overview 218

Theories of ethics 224
