Contributors	xi
Preface	xiii
<b>Chapter 1 Biological control of weeds with fungal plant pathogens</b>	<b>1</b>
<i>D.O. TeBeest</i>	
1.1 Introduction	1
1.2 Strategies for controlling weeds with plant pathogens	2
1.3 Examples of the classical strategy	2
1.4 Examples of the mycoherbicide strategy	4
1.5 Pathogens under evaluation for biological weed control	7
1.6 The effectiveness of fungal plant pathogens as weed control agents	10
1.7 Summary	12
<b>Chapter 2 The use of <i>Bacillus thuringiensis</i> as an insecticide</b>	<b>19</b>
<i>D.R. Dent</i>	
2.1 Introduction	19
2.2 Mode of action and specificity	20
2.3 Selection, manipulation and evaluation of strains	24
2.4 Fermentation, formulation and field application	26
2.5 Commercialization of <i>Bt</i> as a microbial insecticide	30
2.6 IPM and the future of <i>Bt</i>	32
<b>Chapter 3 Aspects of biocontrol of fungal plant pathogens</b>	<b>45</b>
<i>J.M. Whipps and M.P. McQuilken</i>	
3.1 Introduction	45
3.2 Direct application of antagonists	46
3.3 Commercial biocontrol agents of fungal pathogens	64
3.4 Future prospects	68

<b>Chapter 4</b>	<b>The use of microbial agents for the biological control of plant parasitic nematodes</b>	<b>81</b>
	<i>B. Kerry</i>	
4.1	Introduction	81
4.2	Historical background	82
4.3	Potential biological control agents	83
4.4	Ecological considerations	86
4.5	Selection of potential agents	93
4.6	Biological control strategies	98
4.7	Research needs and prospects	100
<b>Chapter 5</b>	<b>Insect viruses as biocontrol agents</b>	
	<i>D. Winstanley and L. Rovesti</i>	<b>105</b>
5.1	Introduction	
5.2	Insect viruses	105
5.3	Baculoviruses	106
5.4	Variations in virus susceptibility in insects	106
5.5	Current status of insect viruses for pest control	113
5.6	Strategies of use for insect viruses	114
5.7	Specific examples for pest control	115
5.8	Production and formulation	120
5.9	Application of viral insecticides	124
5.10	Genetic improvement of viral insecticides	126
5.11	Conclusions	129
		<b>130</b>
<b>Chapter 6</b>	<b>Cyanobacteria and <i>Azolla</i></b>	
	<i>B.A. Whitton</i>	<b>137</b>
6.1	Introduction	
6.2	Features of cyanobacteria	137
6.3	Free-living cyanobacteria in rice-fields	138
6.4	<i>Anabaena</i> - <i>Azolla</i> symbiosis	145
6.5	Attempts to develop new symbiotic associations	154
6.6	Discussion and conclusions	156
		<b>156</b>
<b>Chapter 7</b>	<b>Mycorrhizal associations</b>	
	<i>D.T. Mitchell</i>	<b>169</b>
7.1	Introduction	
7.2	Types of mycorrhizal association	169
7.3	Role of mycorrhizas in agriculture, forestry and horticulture	171
7.4	Selection and production of ectomycorrhizal fungi for tree inoculation	177
7.5	Selection and production of vesicular-arbuscular mycorrhizal (VAM) inoculum	181
		<b>185</b>

7.6	Selection and production of ericoid endomycorrhizal inoculum	187
7.7	Conclusions and future developments	188
<b>Chapter 8</b>	<b><i>Rhizobium</i> inoculation of crop plants</b> <i>D. Gareth Jones and D.M. Lewis</i>	197
8.1	Introduction and historical background	197
8.2	The nature of rhizobial inoculants	201
8.3	The extent and success of <i>Rhizobium</i> inoculation	209
8.4	Future prospects	211
<b>Chapter 9</b>	<b>The use of microorganisms in plant breeding</b> <i>G.M. Evans</i>	225
9.1	Introduction	225
9.2	<i>Agrobacterium</i> -mediated gene transfer	227
9.3	Viral genomes as transformation vectors	233
9.4	Application to plant breeding	235
9.5	Future prospects	242
9.6	Conclusions	245
<b>Chapter 10</b>	<b>The mushroom industry</b> <i>J.F. Smith</i>	249
10.1	History of mushroom culture	249
10.2	The role of microorganisms in composting	255
10.3	Microorganisms and fruitbody initiation	263
10.4	Future trends	265
<b>Chapter 11</b>	<b>The exploitation of microorganisms in the processing of dairy products</b> <i>A.H. Varnam</i>	273
11.1	Introduction	273
11.2	Starter microorganisms in manufacture of cheese and fermented milk	274
11.3	Starter technology in manufacture of yoghurt and other fermented milks	281
11.4	Starter technology in production of soft cheese	284
11.5	Starter technology in manufacture of hard, semi-hard and semi-soft cheese	287
<b>Chapter 12</b>	<b>The exploitation of microorganisms in the manufacture of alcoholic beverages</b> <i>A.H. Varnam</i>	297
12.1	Introduction	297
12.2	The key role of <i>Saccharomyces</i>	297

12.3	Microorganisms in the brewing of beer	302
12.4	Microorganisms in wine-making	311
12.5	Manufacture of other non-distilled alcoholic beverages	315
12.6	Manufacture of distilled alcoholic beverages	316
<b>Chapter 13</b>	<b>The exploitation of moulds in fermented foods</b>	<b>321</b>
	<i>R.A. Samson</i>	
13.1	Introduction	321
13.2	Fungal flora involved in fermentation of food	322
13.3	Growth characteristics of food-fermenting moulds	325
13.4	Two examples of traditional food-fermenting products	329
13.5	Starter cultures	332
13.6	Safety	332
13.7	Alternative substrates of food-fermenting fungi	334
13.8	Conclusions	335
<b>Chapter 14</b>	<b>The exploitation of microorganisms in the developing countries of the tropics</b>	<b>343</b>
	<i>K.A. Jones, A. Westby, P.J.A. Reilly and M.J. Jeger</i>	
14.1	Introduction	343
14.2	Use of microbes for pest control	344
14.3	Fermentation – a low-cost, appropriate technology for lesser developed countries	354
<b>Chapter 15</b>	<b>Microorganisms and detoxification of industrial waste</b>	<b>371</b>
	<i>M.T. Balba</i>	
15.1	Introduction	371
15.2	Factors affecting biodegradation	371
15.3	Strategems used by microorganisms for the degradation of xenobiotics	379
15.4	Biodegradation of major groups of environmental pollutants	380
15.5	The prospects of microbial application to toxic waste treatment	389
15.6	General conclusions	406
<b>Chapter 16</b>	<b>Formulation of biological control agents</b>	<b>411</b>
	<i>D.J. Rhodes</i>	
16.1	Introduction	411
16.2	Principles of formulation	412
16.3	Properties of biological control agents	413

16.4	Requirements for formulation, distribution and application	418
16.5	Available technology	420
16.6	Application to the foliar surface	423
16.7	Application to soil	429
16.8	Postharvest and non-agricultural applications	433
16.9	Conclusions	434
<b>Chapter 17</b>	<b>The commercial exploitation of microorganisms in agriculture</b>	<b>441</b>
	<i>K.A. Powell</i>	
17.1	Introduction	441
17.2	Microbial control agents	441
17.3	Mycorrhizal inoculants	449
17.4	<i>Rhizobium</i> inoculants	449
17.5	Historical aspects	450
17.6	Future prospects	451
17.7	Developmental influences for biological control agents	451
17.8	Conclusion	457
