

**THE CASE FOR NEW PARADIGMS
IN CELL BIOLOGY AND IN
NEUROBIOLOGY**

Harold Hillman
FRONTIER OF KNOWLEDGE

The Edwin Mellen Press
Lewiston/Queenston/Lampeter

CONTENTS

Foreword		ix
Chapter 1.	Experiments on 'high-energy' phosphates	1
Chapter 2.	Subcellular fractionation	6
Chapter 3.	Histology	7
Chapter 4.	Publication of findings	11
Chapter 5.	The development of subcellular fractionation	14
Chapter 6.	The analysis of subcellular fractionation	22
Chapter 7.	The assumptions implied in subcellular fractionation	28
Chapter 8.	Philosophy of subcellular fractionation	39
Chapter 9.	Control experiments	40
Chapter 10.	Electron microscopy of biological tissues	43
Chapter 11.	Publications of conclusions	49
Chapter 12.	Unfixed nerve cells	56

Chapter 13.	Light and electron microscopy	59
Chapter 14.	Explanations for artifacts of microscopy	70
Chapter 15.	Different techniques of electron microscopy	77
Chapter 16.	Reactions of reviewers	86
Chapter 17.	Freedom of thought and expression	90
Chapter 18.	Problems in presenting a viewpoint	95
Chapter 19.	A film	105
Chapter 20.	Refereeing and peer review	108
Chapter 21.	Skepticism and cynicism	111
Chapter 22.	Film to book	121
Chapter 23.	Does the structure of the living cell matter?	131
Chapter 24.	What is reasonably known about the structure of the cell	136
Chapter 25.	Publication of the 'Living Cell'	140
Chapter 26.	Debate	150
Chapter 27.	Consequences to cytology	179

Chapter 28.	Cellular structure of the brain	181
Chapter 29.	Difficulties of the hypothesis of cellular structure of brain	197
Chapter 30.	The synapse	200
Chapter 31.	Publication of these views on synapses	211
Chapter 32.	What is reasonably certain about the structure of the mammalian nervous system	214
Chapter 33.	Consensus, reproducibility, objectivity and subjectivity in scientific research	216
Chapter 34.	To the cytologists	220
Chapter 35.	To postgraduate students of biology, biochemistry, biophysics and pharmacology	222
Chapter 36.	To undergraduate students	224
Chapter 37.	To teachers in schools, colleges and universities	241
Chapter 38.	To research supervisors and directors	245
Chapter 39.	To histologists, histopathologists and electron microscopists	246

Chapter 40.	To histochemists and immunocytochemists	250
Chapter 41.	To medical research workers	252
Chapter 42.	To the pharmacologists	259
Chapter 43.	To the toxicologists	264
Chapter 44.	To the oncologists	266
Chapter 45.	To the neurobiologists	268
Appendix 1.	Control experiments	269
Appendix 2.	Ethical and moral questions	296
Appendix 3.	Suggested code for academic freedom and intellectual honesty	299
