PREFACE, V

LIST OF FREQUENTLY USED SYMBOLS, VIII

CHAPTER 1. DEFINITION AND SUBJECT OF THE DISCIPLINE (*I. Kisiel*), 1

- 1.1 Nature of the discipline and interdisciplinary connections, 1
 - 1.1.1 Introduction, 1
 - 1.1.2 Problems of rock and soil mechanics, 2
 - 1.1.3 Methods used in rock and soil mechanics, 2
- 1.2 Discontinuity and granularity, 3
 - 1.2.1 General concepts, 3
 - 1.2.2 Element size and shape, 3
 - 1.2.3 Specific surface, 4
 - 1.2.4 Content of the material in an element of the medium, 5
- 1.3 Multicomponent structure, 6
 - 1.3.1 Skeleton, pores, and filler, 6
 - 1.3.2 Porosity, 6
 - 1.3.3 Porosity of rocks, 7
 - 1.3.4 Water and gas contents, 8
- References, 9

CHAPTER 2. MECHANICAL MODELS OF ROCKS AND SOILS (*I. Kisiel*), 10

- 2.1 Description of the models, 10
- 2.2 The concepts of rheology of a continuum, 11
 - 2.2.1 Space, time, configuration, 11
 - 2.2.2 Deformation of a continuous body, 12
 - 2.2.3 Infinitesimal strains, 13
 - 2.2.4 Mass and its conservation, 14
 - 2.2.5 The state of stress. Equations of motion, 15
 - 2.2.6 Constitutive equations, 17
- 2.3 The model of an elastic body, 17
 - 2.3.1 The isotropic linearly elastic body, 17
 - 2.3.2 The anisotropic elastic body, 19

- 2.3.3 Transformation of the coordinate system, 22
- 2.4 Linear rheological models, 23
 - 2.4.1 Symbols and fundamental concepts, 23
 - 2.4.2 Rules of joining the elements, 25
 - 2.4.3 Viscoelastic two-parameter models, 26
 - 2.4.4 Boltzmann's heredity principle, 29
- 2.5 Piecewise linear models, 30
 - 2.5.1 Two-parameter and three-parameter models, 30
 - 2.5.2 The model of the M/V and the standard body, 33
 - 2.5.3 The critical time of the M/V model, 36
 - 2.5.4 Flow regions in the M/V body, 37
- 2.6 Terzaghi's hydrodynamic model, 39
 - 2.6.1 Introductory remarks, 39
 - 2.6.2 Consolidation and compressibility of soils, 40
 - 2.6.3 Water movement in soil. Darcy's law, 43
 - 2.6.4 Neutral and effective pressure, 46
 - 2.6.5 Terzaghi's theory of consolidation, 47
 - 2.6.6 The effect of confined gas, 49
- 2.7 Discrete models for rocks and soils, 52
 - 2.7.1 Introduction, 52
 - 2.7.2 Theoretical foundations, 54
 - 2.7.3 Distribution of vertical loads, 56
 - 2.7.4 The equations of equilibrium, 59
- 2.8 Shear resistance of soils, 61
 - 2.8.1 Internal friction and cohesion, 61
 - 2.8.2 Limit shear resistance, 63
 - 2.8.3 Relation between porosity and shear resistance, 69
- References, 73

CHAPTER 3. PROPERTIES OF ROCKS AND SOILS (*I. Kisiel*), 75

- 3.1 Physical properties of rocks, 75
 - 3.1.1 Mineral composition, 75
 - 3.1.2 Microstructure of rocks, 76
 - 3.1.3 Thermal properties of rocks, 80
 - 3.1.4 Properties of rock strata, 83
- 3.2 Physical properties of soils, 84
 - 3.2.1 Non-cohesive and cohesive soils, 84
 - 3.2.2 The effect of the liquid component, 86
 - 3.2.3 Surface tension, 86
 - 3.2.4 Adsorbed water, 88
 - 3.2.5 Unit weight and specific gravity, 89
- 3.3 Rheological properties of rocks, 90

- 3.3.1 Rheological properties of rock strata, 90
- 3.3.2 Test methods for rocks, 90
- 3.3.3 Specimen size and mechanical features, 94
- 3.3.4 Contact friction in rocks and rock strata, 98
- 3.3.5 Rheological relations, 104
- 3.3.6 Plasticity and strength, 120
- 3.3.7 Physical properties and rheological parameters, 124
- 3.3.8 Water action in a rock stratum, 128
- 3.3.9 Permeability of rock strata, 131
- 3.4 Rheological parameters of soils, 132
 - 3.4.1 Introduction, 132
 - 3.4.2 Test methods, 133
 - 3.4.3 Oedometer test, 136
 - 3.4.4 Methods of investigating shear resistance, 141
 - 3.4.5 Rheological phenomena in soils, 146
- 3.5 The properties of frozen soils, 159
 - 3.5.1 Physical phenomena in frozen soils, 159
 - 3.5.2 Rheological properties of frozen soils, 163
- References, 171

CHAPTER 4. VISCOELASTICITY IN SOIL AND ROCK MECHANICS (*I. Kisiel*), 174

- 4.1 Distribution of stresses in a substratum, 174
 - 4.1.1 Introduction, 174
 - 4.1.2 Loading of an isotropic elastic substratum, 175
 - 4.1.3 Loads over an inhomogeneous and anisotropic substratum, 189
 - 4.1.4 An elastic layer, 192
 - 4.1.5 The problem of a heavy slope, 195
- 4.2 Deformations of the substratum and slopes, 197
 - 4.2.1 Introduction, 197
 - 4.2.2 Rheological parameters of soils, 200
 - 4.2.3 Settlement calculation for buildings, 202
 - 4.2.4 Rheological deformations of slopes, 206
- 4.3 The in situ state of a rock mass, 208
 - 4.3.1 In situ stresses, 208
 - 4.3.2 Tectonic stresses, 210
 - 4.3.3 Formation of folds, 212
 - 4.3.4 Local movements. Faults, 217
 - 4.3.5 Effects associated with stress release, 225
- 4.4 Excavations in a rock stratum, 227
 - 4.4.1 Introduction, 227

- 4.4.2 Pressure on the excavation support, 228
- 4.4.3 Drift within a stratum, 231
- 4.4.4 A vertical shaft, 242
- 4.4.5 An excavation in a layered stratum, 250
- 4.4.6 Roofs of extended excavations, 254
- 4.5 Problems associated with drilling, 256
 - 4.5.1 Introduction, 256
 - 4.5.2 Stress concentrations at the borehole bottom, 257
 - 4.5.3 Conditions during drilling, 259
- 4.6 Discrete models of rock strata, 260
 - 4.6.1 Introduction, 260
 - 4.6.2 The geometry of a blocky stratum, 263
 - 4.6.3 Distribution of a concentrated load, 265
- References, 269

CHAPTER 5. GROUNDWATER FLOW (*I. Kisiel*), 272

- 5.1 Equations of groundwater movement, 272
 - 5.1.1 Introductory remarks, 272
 - 5.1.2 Displacements, stresses, and boundary conditions, 274
 - 5.1.3 Equation of continuity and equation of motion, 275
 - 5.1.4 Potential function and stream function, 278
- 5.2 Two-dimensional groundwater flow problem, 280
 - 5.2.1 The essence of the two-dimensional problem, 280
 - 5.2.2 Confined flow of water, 281
 - 5.2.3 Unconfined flow of water, 282
- 5.3 Some practical problems, 283
 - 5.3.1 The stream lines and flow nets, 283
 - 5.3.2 Seepage forces in a soil, 286
 - 5.3.3 Seepage under an impervious dam, 290
- 5.4 Seepage in scarps and slopes, 293
 - 5.4.1 Seepage through a dam, 293
 - 5.4.2 Additional loading of the slope, 296
- 5.5 Drainage of the ground and excavations, 298
 - 5.5.1 Introduction, 298
 - 5.5.2 Water pumping from a confined aquiferous layer, 299
 - 5.5.3 Pumping water out of an unconfined aquifer, 305
 - 5.5.4 Weber's solution, 307
 - 5.5.5 Calculation of the constant m in Weber's formula, 310
 - 5.5.6 The limit discharge of a well, 312
 - 5.5.7 The partially penetrating well, 316
 - 5.5.8 Supplementary remarks, 318

- 5.6 Water flow in rock strata, 319
 - 5.6.1 Introduction, 319
 - 5.6.2 Formulation of the problem of water flow in rocks, 320
- References, 322

CHAPTER 6. THEORY OF CONSOLIDATION (*W. Derski*), 324

- 6.1 Historical remarks, 324
- 6.2 Quasi-stationary problems, 331
 - 6.2.1 Porosity, 331
 - 6.2.2 Kinematics of the medium, 333
 - 6.2.3 Forces, 334
 - 6.2.4 Equations of internal equilibrium and the equation of liquid motion, 336
 - 6.2.5 Constitutive relations, 337
 - 6.2.6 Collective equations of the theory of consolidation and their solution by the displacement function, 338
 - 6.2.7 One-dimensional problem, 341
 - 6.2.8 Plane problem of the theory of consolidation for a half-infinite disk, 348
 - 6.2.9 Axi-symmetric problem for a half-space loaded on the surface with a concentrated force, 356
 - 6.2.10 Reciprocal theorem for displacements, 362
 - 6.2.11 Singular solutions, 365
 - 6.2.12 Action of a forced source of liquid, 368
 - 6.2.13 Survey of solutions of quasi-stationary problems, 370
- 6.3 Dynamic problems of the theory of consolidation, 371
 - 6.3.1 Biot's equations of motion, 372
 - 6.3.2 Equations of mass balance, 374
 - 6.3.3 Principle of conservation of momentum and equations of motion, 376
 - 6.3.4 Kinematic components and physical components of a medium, 379
 - 6.3.5 Kinetic energy. Lagrange equations. Equations of motion, 381
 - 6.3.6 Purely elastic waves, 385
 - 6.3.7 Attenuated waves, 388
 - 6.3.8 Review of published solutions of dynamic problems, 392
- 6.4 Thermoconsolidation, 398
 - 6.4.1 Previous thermoconsolidation models, 399
 - 6.4.2 First law of thermodynamics, 400
 - 6.4.3 Second law of thermodynamics, 402
 - 6.4.4 State functions and constitutive relations for the case of temperature equality in the liquid and the skeleton, 405
 - 6.4.5 System of equations of thermoconsolidation under the assumption of equal temperature for the skeleton and liquid, 407

6.4.6 State functions in the case of the temperature difference between the components of the medium, 409

References, 412

CHAPTER 7. PLASTICITY AND LIMIT STATES (*R. J. Izbicki, Z. Mróz*), 423

7.1 Constitutive relations for elastic-plastic models of rocks and soils, 423

7.1.1 Introduction, 423

7.1.2 The model of an elastic-perfectly plastic material, 425

7.1.3 Soil as an elastic-plastic hardening (softening) material, 435

7.1.4 Process of failure in rocks represented by the elastic-plastic model, 448

7.2 The limit state conditions, 453

7.2.1 General form of the limit state condition, 453

7.2.2 Mohr's condition, 456

7.2.3 Coulomb's condition, 461

7.2.4 Modified Coulomb's condition, 463

7.2.5 Other limit state conditions, 464

7.2.6 The limit state conditions for anisotropic materials, 466

7.3 Limit analysis, 470

7.3.1 Basic concepts — The limit state, 470

7.3.2 Exact and approximated solutions of the bearing capacity problem, 472

7.3.3 Limit theorems, 475

7.3.4 Stress and velocity discontinuity lines, 480

7.3.5 The dissipation functions for the Coulomb conditions, 484

7.4 Examples of application of approximate methods, 487

7.4.1 Application of the limit equilibrium methods, 487

7.4.2 Application of the limit analysis methods, 524

7.5 The method of characteristics, 558

7.5.1 Introduction, 558

7.5.2 Plane plastic deformation, 561

7.5.3 Solutions for special cases of plane deformation, 584

7.5.4 Plane plastic deformation of an anisotropic body, 613

7.5.5 Axially-symmetric plastic deformation, 614

7.5.6 Solutions for special cases of axially-symmetric deformation, 624

References, 630

CHAPTER 8. MECHANICS OF THE CLAY FRACTION (*I. Kisiel*), 639

8.1 Data and assumptions, 639

8.1.1 Introduction, 639

8.1.2 Shape and size of clay particles, 639

8.1.3 Number and nature of interparticle contacts, 640

- 8.2 Physical fundamentals, 641
 - 8.2.1 Basic concepts, 641
 - 8.2.2 On the theory of rate processes, 643
- 8.3 Clay particles and groundwater, 647
 - 8.3.1 Description of clay particles, 647
 - 8.3.2 Water in clays, 648
 - 8.3.3 Clay-water interaction, 648
 - 8.3.4 Viscosity of absorbed water, 650
 - 8.3.5 The effect of ions contained in groundwater, 652
 - 8.3.6 Thixotropy, 652
- 8.4 The primary structure of the clay-water fluid, 653
 - 8.4.1 Kinds of structure of a clay-water fluid, 653
 - 8.4.2 Orientation degree, 655
 - 8.4.3 Number of M-M contacts, 656
 - 8.4.4 The direction of particle orientation, 658
 - 8.4.5 Clay structure, 659
- 8.5 Movements of a structure element, 661
 - 8.5.1 Specification of a structure element, 661
 - 8.5.2 Shape changes of a structure element, 663
 - 8.5.3 Immediate deformation, 663
 - 8.5.4 Energy distribution in the vicinity of a clay particle, 664
 - 8.5.5 Assumption on the dimensions of clay particles, 666
- 8.6 Action of isotropic pressure (consolidation), 667
 - 8.6.1 Introduction, 667
 - 8.6.2 Isotropic pressure, 667
 - 8.6.3 Spontaneous breaking of M-M contacts, 669
 - 8.6.4 Process of isotropic consolidation, 670
 - 8.6.5 Instantaneous deformation during consolidation, 671
- 8.7 Action of the stress deviator, 672
 - 8.7.1 Introduction, 672
 - 8.7.2 Uniaxial instantaneous strain, 673
 - 8.7.3 Friction in M-M contacts, 674
 - 8.7.4 Flow of the W-M contacts, 675
 - 8.7.5 Rheological relationships, 676
- 8.8 Rheological models of primary clay, 677
 - 8.8.1 Introduction, 677
 - 8.8.2 Previous experimental results, 677
 - 8.8.3 Reversible strain, 679
 - 8.8.4 Transient creep, 679
 - 8.8.5 Accelerating creep, 680
- 8.9 Structural changes of a clay-water fluid, 680
 - 8.9.1 Introduction, 680

- 8.9.2 The degree of orientation and the number of active particles, 681
 - 8.9.3 Degree of orientation and rheological parameters, 682
 - 8.9.4 Degree of orientation in respect to time, 683
 - 8.9.5 Form of the function $g_r(t)$, 683
 - 8.10 The oriented clay-water fluid, 684
 - 8.10.1 Introduction, 684
 - 8.10.2 Determination of the preconsolidating stress, 685
 - 8.10.3 Reloading of an oriented clay, 686
 - 8.10.4 The effect of changes in water content, 686
 - 8.11 Clayey soils, 687
 - 8.11.1 Introduction, 687
 - 8.11.2 Cohesive soils. Consistency, 688
 - 8.11.3 Structure of clayey soils, 690
 - 8.11.4 Creep process according to Ter-Stepanian, 692
 - 8.11.5 Creep curve for clayey soils, 694
 - 8.12 Creep in clayey soils, 696
 - 8.12.1 Introduction, 696
 - 8.12.2 Experimental determination of the parameters of the M/V model, 698
 - 8.12.3 Variability of rheological parameters, 703
 - 8.12.4 Final remarks, 706
- References, 707
- INDEX, 711
