

Biophysical Aspects of Coherence and Biological Order

JIRÍ POKORNÝ
AND TSU-MING WU

With 60 Figures
and 6 Tables

Springer

Contents

Preface	9
1. Biological Order	11
1.1 Biophysical Mechanisms	11
1.2 Discussion about Experiments	16
2. Thermodynamic Aspects of Order	22
2.1 Closed Systems	22
2.2 Open Systems	25
2.3 Selforganization	28
3. Normal Modes	32
3.1 The Vibration Modes of a String	32
3.2 Vibrations in an Infinite One-Dimensional Chain of Identical Particles	33
3.3 The Number of Vibration Modes	35
3.4 Equivalence of a Vibration Mode and a Harmonic Oscillator	36
3.5 Vibrations in One-Dimensional Chain with Particles of Two Types	38
3.6 One-Dimensional Disordered Chain	40
3.7 Properties of the Cytoskeleton	46
3.8 Thermal Vibrations in Microtubules and Actin Filaments	50
3.9 Energy Supply to the Cytoskeleton	54
3.10 Hamiltonian of Vibrating Particles in One-Dimensional Chain	56
4. Quantum Mechanical Theory of Rate Equations	61
4.1 The Fröhlich Rate Equation	61
4.2 Validity of the Microscopic Foundation of the Rate Equation	70
4.3 Derivation of the Fröhlich Rate Equation Using Green Function Technique	72
4.4 Non-Linear Rate Equation	79
4.5 Power Relations	84

5. Energy Condensation	88
5.1 Steady State Solution of the Fröhlich Rate Equation	88
5.2 Extinction of Energy Condensation	93
5.3 Computer Simulation of Energy Condensation	95
5.4 Frequencies of Coherent Vibrations	97
5.5 Models of the Fröhlich System	98
5.6 Stability of the Steady State Solution	105
6. Coherence in Systems with Random Energy Supply	111
6.1 Feedback in the System	111
6.2 Stochastic Differential Equation	113
6.3 Coherence in Systems with Negative Resistance	115
6.4 Coherence in the Fröhlich system	118
7. Spectral Transformation of Energy	120
7.1 Manley-Rowe Power Relations	120
7.2 Energy Transfer Between Modes	125
7.3 Transfer of Energy in Fröhlich Systems	127
7.4 Amplification of Electric Signals in Macromolecules	129
8. Oscillating Electric Field Generated by Living Cells	132
8.1 Source of the Oscillating Electric Field	132
8.2 Continuous Dipole Layer	134
8.3 Computer Simulation of the Generated Electromagnetic Field	139
8.4 Spherical Model Cells	140
8.5 Ellipsoidal Model Cells	143
8.6 Energy Flow from a Cell	144
8.7 Electric Field Generated by Microtubules	145
9. Information Transfer Between Oscillation Systems	148
9.1 Interaction and Information	148
9.2 Energy Condensation, Probability and Information	150
9.3 Information Entropy in Coherent Systems	156
9.4 Communication Channel Between Coherent Systems	158
10. Interaction Between Vibration Systems	164
10.1 Frequencies of Interacting Oscillators	164
10.2 Interaction Forces and Energy	166
10.3 Quantum Case of Interaction	167
10.3.1 Non-Resonant Case	168
10.3.2 Resonant Case	168

10.4	Classical Case of Interaction	170
10.5	Approximate Relations for Interaction Energy	171
11.	Heat Bath Coupling Effects	173
11.1	Decrease of Energy Condensation	173
11.2	Interaction Energy	178
12.	Coherent States in Cancer Cells	183
12.1	Phosphorylation of Proteins	183
12.2	Cancer Process	185
12.3	The Role of Protein Phosphorylation in Cancer Mechanism - Hypothesis	190
13.	Appendices	195
13.1	Heisenberg, Schrödinger, and Interaction Representations . .	195
13.2	Commutation Relations	197
13.3	The Adiabatic Hypothesis and Operator of Dynamic Evolution	199
13.4	Contour Integrals	200
13.5	Stochastic Differential Equation and Transients in Linear Systems	204
13.6	Some Relations from Vector Analysis	207
13.7	Electromagnetic Field of the Electric Dipole	208
13.8	Probability and Information	210
13.9	Information and Physical Entropy	213
13.10	Channel Capacity Integral	214
13.11	Energy Flow from the Electric Dipole	215
13.12	Interaction of Two Oscillators	217
13.13	Screening in Conductive Medium	220
13.14	The Equilibrium Constant and Energy of Binding	223
	Bibliography	225
	Index	234
