Contents

1. An Overview
   The Problem 3
   History 4
   The Origin of the Flies 8
   Some Basic Biology 12
   What's in a Name? 15
   Sources of Information 15

2. Population Genetics—Genes
   The Epistemological Paradox 18
   Morphological Mutants 19
   Fitness Variation 23
   Selection Experiments 30
   Allozymes 34
   DNA Variation 42
   Mutation 43
   Epilog 47

3. Population Genetics—Inversions
   General Features 48
   Geographic Distributions 53
   Temporal Changes 73
   Other Inversions 81
   Allozymes and Inversions 85
   DNA Studies 88
## Contents

Theory of the Origin of Inversions 90
Further Information 93

### 4. Population Genetics—Laboratory Studies 94
- Genes 94
- Inversions 102
- Fitness Components 114
- The Rare Male Effect 119
- Sex Ratio and Segregation Distortion 125
- Heterogeneous Environments and Habitat Choice 130
- Migration 135
- Genetic Drift 139
- Epilog 141

### 5. Ecology 143
- Breeding Sites 143
- Yeasts and Other Microbes 156
- Population Structure 160
- Interspecific Competition 169
- Life Histories, Phenotypic Plasticity, Acclimation, and Aging 174
- Parasites and Symbionts 176
- Epilog 184

### 6. Ecological Genetics 185
- Habitat Choice 185
- Ephemeral and Newly Founded Populations 193
- Cactus-Breeding *Drosophila* 196
- Flower-Breeders in South America 206
- Mycophagous *Drosophila* 208
- Male Mating Success 210
- Population Growth and Size 210

### 7. Speciation 213
- The Taxonomy of Species and Speciation 214
- Three Caveats 215
- The First Effects 216
- Reinforcement 219
- Genetic Divergence 223
- Genetics of Premating Isolation 230
- Genetics of Postmating Isolation 241
- Symbionts 255
- Laboratory Studies 257
- Population Processes 263
- Sexual Selection and Isolation 265
### 8. Phylogenetics
- Background
- Basics of Phylogenetics
- The Larger Context
- Genus *Drosophila*
- Individual Groups
- Gene Trees-Species Trees
- Conclusions

### 9. Genome Evolution
- *Drosophila* Genome Structure
- Genome Size Evolution
- Karyotype Evolution
- Linkage
- Global View of scDNA Evolution
- Heterochromatin
- The Y Chromosome
- Recombination
- Transposable Elements
- Genome Projects

### 10. Molecular Evolution
- Measures of Variation
- Levels of Nuclear DNA Variation
- Pattern of Polymorphism
- Insertion/Deletions (Indels)
- An Historical Aside
- Recombination and Hitchhiking
- Rates of DNA Evolution
- Codon Usage Bias and Effects on Rates
- Between Versus Within
- Mitochondrial DNA
- Out of Africa: A Reevaluation of *D. melanogaster*
- DNA Variation and Inversions: Ancestry and Gene Conversions
- Gene Duplications
- Gene Structure
- *Adh*: The Center of Attention
- Other Genes

### 11. Development
- Gene Regulation
- Morphology and Embryogenesis
- Development and Phylogeny
- Canalization and Genetic Assimilation
12. Retrospective and Prospective

- Integration of Information 459
- Genetic Loads 461
- Whither the Selectionist/Neutralist Debate? 462
- Scales of Analysis 464
- Development 466
- Speciation 467
- Conservation 468
- The Model 469
