

Transportation and Traffic Theory

Proceedings of the Tenth International Symposium on Transportation and Traffic Theory, held July 8–10, 1987, at the Massachusetts Institute of Technology, Cambridge, Massachusetts

Editors

Nathan H. Gartner

Department of Civil Engineering
University of Lowell
Lowell, Massachusetts

Nigel H. M. Wilson

Department of Civil Engineering
Massachusetts Institute of Technology
Cambridge, Massachusetts

This symposium was sponsored by the Center for Transportation Studies, Massachusetts Institute of Technology; the National Science Foundation; UPS Foundation; and the University of Lowell

Elsevier

New York • Amsterdam • London

Contents

International Advisory Committee	xi
Contributors	xiii
Preface	xvii
Performance of Urban Traffic Networks	1
Hani S. Mahmassani, James C. Williams, and Robert Herman	
Queue Evolution on Freeways Leading to a Single Core City During the Morning Peak	21
Masao Kuwahara and Gordon F. Newell	
Analysis of the Effects of Parameter Estimation Error on Transportation Network Equilibrium Models	41
Geoffrey Rose, Frank S. Koppelman, and Mark S. Daskin	
Traffic Control and Traffic Assignment in a Signal-Controlled Network with Queueing	61
M. J. Smith	
A Theoretical Model to Calculate Speed Distribution as a Function of Density	79
Dirk Heidemann	
Modeling and Study of Speed and Bunch Distributions Considering Fluctuations of Traffic Flow	99
Youichi Tamura and Takeshi Chisyaki	
Freeway Speed Distribution and Acceleration Noise—Calculations from a Stochastic Continuum Theory and Comparison with Measurements	119
Reinhart D. Kühne	
Modeling and Filtering of Freeway Traffic Flow	139
S. A. Smulders	
Calculation of Signal Settings to Minimise Delay at a Junction	159
Benjamin G. Heydecker and Ian W. Dudgeon	

Calculations of Optimum Fixed-Time Signal Programs Klaus Möller	179
An Analysis of Traffic Performance of Major/Minor Priority Junctions With Non-Stationary Flow Demands Marian Tracz and Stanislaw Gaca	199
A Stochastic Environment for the Adaptive Control of Single Intersections B. Betrò, F. Schoen, and M. G. Speranza	217
Simulation Study of OPAC: A Demand-Responsive Strategy for Traffic Signal Control Hobih Chen, Stephen L. Cohen, Nathan H. Gartner, and Charles C. Liu	233
A Knowledge Based Expert System Architecture for Computer Aided Analysis and Design of Intersections Chris Hendrickson, Carlos Zozaya-Gorostiza, and Sue McNeil	251
Real-Time Identification of O–D Network Flows from Counts for Urban Traffic Control Hartmut Keller and Gerhard Ploss	267
Theoretical Considerations for Signal Timing Plan Selection in UTCS First Generation Control Systems Shih-Miao Chin	285
Delay-Minimizing Control and Bandwidth-Maximizing Control of Coordinated Traffic Signals by Dynamic Programming Mamoru Hisai	301
The Interaction Between Signal Control Policies and Route Choice Michael J. Smith, Tom Van Vuren, Benjamin G. Heydecker, and Dirck Van Vliet	319
Updating of Volume–Density Relationships for an Urban Expressway Control System H. Akahane and M. Koshi	339
Traffic Responsive Control of Freeway Networks by a State Feedback Approach Michael Cremer and Sigund Fleischmann	357

Fuzzy On-Ramp Control Model on Urban Expressway and Its Extension	377
Tsunasa Sasaki and Takamasa Akiyama	
The Kalman Filtering Approaches in Some Transportation and Traffic Problems	397
Iwao Okutani	
Equilibrium in Competitive Urban Mass Transportation Markets	417
Patrick T. Harker and Seung-Chan Choi	
Stochastic Properties of Flows in Freight Consolidation Networks	437
Warren B. Powell and Hugo P. Simão	
Methods to Combine Different Data Sources and Estimate Origin-Destination Matrices	459
Moshe Ben-Akiva	
Airport Terminal Geometries for Minimal Walking Distances	483
S. C. Wirasinghe, S. Bandara, and U. Vandebona	
List of Referees	503
Index	505
