

Methods in Cell Biology

VOLUME 105

The Zebrafish: Disease Models and Chemical Screens

3rd Edition

CONTENTS

Contributors	xv
Preface	xxi
Part I: Disease Models	
1. Zebrafish Models of Germ Cell Tumor	
<i>Joanie C. Neumann, Kate Lillard, Vanessa Damoulis and James F. Amatruda</i>	
I. Overview	4
II. Germline Development	4
III. Germ Cell Tumors	9
IV. Methods for Studying Zebrafish Germ Cells	13
Reference	18
2. Dissecting Mechanisms of Myelinated Axon Formation Using Zebrafish	
<i>Tim Czopka and David A. Lyons</i>	
I. Introduction	26
II. Methods and Materials	34
III. Summary	52
Acknowledgments	52
References	52
3. <i>In vivo</i> Analysis of White Adipose Tissue in Zebrafish	
<i>James E.N. Minchin and John F. Rawls</i>	
I. Introduction	64
II. Rationale	68
III. Materials	70
IV. Methods	74
V. Summary	83
Acknowledgments	83
References	83

4. Study of Host–Microbe Interactions in Zebrafish	
<i>Kathryn Milligan-Myhre, Jeremy R. Charette, Ryan T. Phennicie, W. Zac Stephens, John F. Rawls, Karen Guillemain and Carol H. Kim</i>	
I. Introduction	88
II. Laboratory Protocols	95
References	111
5. Hematopoietic Stem Cell Development: Using the Zebrafish to Identify the Signaling Networks and Physical Forces Regulating Hematopoiesis	
<i>Wolfram Goessling and Trista E. North</i>	
I. Developmental Hematopoiesis	118
II. Review of the Literature	119
III. Use of Zebrafish to Investigate HSC Biology	122
IV. Zebrafish Tools and Protocols	129
References	132
6. Zebrafish as a Model for Hemorrhagic Stroke	
<i>Matthew G. Butler, Aniket V. Gore and Brant M. Weinstein</i>	
I. Introduction and Basic Concepts	137
II. Maintaining the Barrier Function of Blood Vessels	142
III. Vascular Integrity and Stroke	143
IV. Zebrafish as a Model for Studying Hemorrhage and Stroke	146
V. Studying Vascular Integrity in the Zebrafish	148
VI. Concluding Remarks	155
References	156
7. A Zebrafish Model for VHL and Hypoxia Signaling	
<i>Ellen van Rooijen, Kirankumar Santhakumar, Ive Logister, Emile Voest, Stefan Schulte-Merker, Rachel Giles and Fredericus van Eeden</i>	
I. VHL Disease	164
II. Chuvash Polycythemia	165
III. VHL Regulates HIF Signaling	165
IV. HIF-Independent Functions of pVHL	167
V. VHL Animal Models	169
VI. Zebrafish as a New Model for VHL	173
VII. Loss of Vhl Leads to a Systemic Hypoxic Response in Zebrafish	176
VIII. <i>vhl</i> Mutants Develop Chuvash Polycythemia and Blood Cell Maturation Defects	176
IX. Zebrafish <i>vhl</i> Mutants Develop Angiogenesis Defects	178
X. Zebrafish <i>vhl</i> Mutants Develop Pronephros Abnormalities	179
XI. Translation from Fish to Humans	180
XII. Concluding Remarks	181
Acknowledgments	182
References	182

8. Basement Membrane Diseases in Zebrafish	
<i>Natalia Martins Feitosa, Rebecca Richardson, Wilhelm Bloch and Matthias Hammerschmidt</i>	
I. Introduction	192
II. Basement Membrane-Related Zebrafish Pathologies	194
III. Methodology for Zebrafish Studies of Basement Membrane Composition and Function	204
IV. Summary	216
Acknowledgments	216
References	216
9. Zebrafish Provides a Novel Model for Lymphatic Vascular Research	
<i>Terhi Karpanen and Stefan Schulte-Merker</i>	
I. Introduction	224
II. Embryonic Lymphangiogenesis in Zebrafish	225
III. Comparison Between Teleosts and Other Vertebrates	230
IV. The Added Value of Zebrafish	231
V. The Secondary Vessel System in Teleosts	233
VI. Concluding Remarks	235
VII. Methods	235
Acknowledgments	235
References	236
10. Not All Bones are Created Equal – Using Zebrafish and Other Teleost Species in Osteogenesis Research	
<i>Alexander Apschner, Stefan Schulte-Merker and P. Eckhard Witten</i>	
I. Case Studies – Using Zebrafish for Addressing Biomedical Questions	241
II. The Evolution of Skeletal Tissues	243
III. Cartilage and Bone in Teleost Fish	244
IV. Intermediate Skeletal Tissues	246
V. Osteocyte-Containing Bone and Acellular Bone	246
VI. Development of Teleost Vertebral Bodies, A Derived Process	247
VII. Remodeling of the Teleost Skeleton	248
VIII. Conclusions	250
Acknowledgments	250
References	250
11. Zebrafish Assays of Ciliopathies	
<i>Norann A. Zaghoul and Nicholas Katsanis</i>	
I. Introduction	258
II. Methods	260
III. Zebrafish Ciliary Mutant Lines	267
IV. General Considerations/Future Development	269
Acknowledgment	270
References	270

12. Infectious Disease Modeling and Innate Immune Function in Zebrafish Embryos	
<i>Chao Cui, Erica L. Benard, Zakia Kanwal, Oliver W. Stockhammer, Michiel van der Vaart, Anna Zakrzewska, Herman P. Spaink and Annemarie H. Meijer</i>	
I. Introduction	274
II. Observation and Isolation of Innate Immune Cells	275
III. Bacterial Infection Methods	286
IV. Analysis of the Innate Immune Response	293
V. Conclusions	301
Acknowledgments	302
References	302
13. Zebrafish as a Model for the Study of Human Cancer	
<i>Julia Etchin, John P. Kanki and A. Thomas Look</i>	
I. Introduction: Zebrafish as a Cancer Model	310
II. The Genetically Tractable Zebrafish	313
III. Transgenic Models of Oncogenesis	315
IV. Modeling the Loss of Tumor Suppression	321
V. Modeling Tumor Cell Intravasation and Metastasis	325
VI. Tumor-Initiating Cells	327
VII. <i>In vivo</i> Small-Molecule Screens and Drug Discovery	329
VIII. Conclusions	332
References	332
14. Generating and Analyzing Fish Models of Melanoma	
<i>E. Elizabeth Patton, Marie E. Mathers and Manfred Scharlt</i>	
I. Introduction	340
II. Transgenic Melanoma Lines in Zebrafish and Medaka	345
III. Ultra-violet Irradiation Treatments	350
IV. Basic Melanoma Pathology	351
V. Histology	354
VI. Molecular Analysis	356
VII. RNA and Protein Isolation From Adult Fish Tumors	360
VIII. Conclusions	362
Acknowledgments	362
References	363
15. Screening Pancreatic Oncogenes in Zebrafish Using the Gal4/UAS System	
<i>Shu Liu and Steven D. Leach</i>	
I. Introduction	368
II. Transgenic Zebrafish with Gal4/UAS-Mediated eGFP-KRAS ^{G12V} Expression in the Exocrine Pancreas	370
III. Identification and Characterization of Pancreatic Tumors	371
IV. Conclusions	379
Acknowledgments	380
References	380

16. Zebrafish Models of Rhabdomyosarcoma	
<i>Eleanor Y. Chen and David M. Langenau</i>	
I. Introduction	384
II. Rationale	387
III. Material and Methods	387
IV. Discussion	399
Acknowledgments	399
References	399
17. Transplantation in Zebrafish	
<i>Pulin Li, Richard M. White and Leonard I. Zon</i>	
I. Introduction	404
II. Rationale	404
III. Methods	407
IV. Discussion	413
Acknowledgment	415
References	415
18. Disease Modeling by Gene Targeting Using MicroRNAs	
<i>C.-C. Lan, I.U.S. Leong, D. Lai, and D.R. Love</i>	
I. Introduction	420
II. Mechanisms of MicroRNA Silencing	422
III. Dicer and MicroRNAs in Zebrafish Development	423
IV. Development of Vector-Based RNA Interference	423
V. RNA Interference Work in Zebrafish	426
VI. Use of siRNAs in the Zebrafish	427
VII. Materials and Methods	429
VIII. Results	431
IX. Future Directions	432
References	433
19. Fluorescent Imaging of Cancer in Zebrafish	
<i>Myron S. Ignatius, and David M. Langenau</i>	
I. Introduction	438
II. Fluorescent Proteins and Transgenic Models of Cancer	439
III. Macroscopic Observation of Tumor Growth	444
IV. Microscopic Observation in Tumorigenesis	446
V. Confirming Transformation of Fluorescent-Labeled Tumor Cells by Cell Transplantation into Irradiated Recipient Animals	449
VI. Identifying Tumor-Propagating Cell Subpopulations by Fluorescent Protein Expression and Cell Transplantation into Irradiated Recipient Animals	451

VII. Use of Syngeneic Zebrafish for Cell Transplantation of Fluorescent-Labeled Tumors and Drug Discovery	452
VIII. Cell Transplantation into Syngeneic Zebrafish to Accurately Assess Self-Renewal in Fluorescent-Labeled Cancer	453
IX. Use of Syngeneic Zebrafish for Cell Transplantation: Single Cell Transplants	454
X. Xenograft Transplantation of Fluorescently Labeled Cells into Zebrafish	455
XI. Conclusions	456
Acknowledgments	457
References	457
20. The Role of Fanconi Anemia/BRCA Genes in Zebrafish Sex Determination <i>Adriana Rodríguez-Mari' and John H. Postlethwait</i>	
I. Introduction	462
II. Results and Discussion	465
III. Summary	481
Acknowledgments	481
Acknowledgments	481
PART II: Chemical Screens	
21. Chemical Screening in Zebrafish for Novel Biological and Therapeutic Discovery <i>Justin L. Tan and Leonard I. Zon</i>	
I. Introduction	494
II. Rationale	494
III. Materials and Methods	496
IV. Discussion/Caveats	509
V. Summary	513
Acknowledgments	513
References	514
22. Using the Zebrafish Photomotor Response for Psychotropic Drug Screening <i>David Kokel and Randall T. Peterson</i>	
I. Introduction	518
II. The PMR Behavior	518
III. Methods	519
IV. Discussion	523
Acknowledgments	523
References	523

23. Designing Zebrafish Chemical Screens

Randall T. Peterson and Mark C. Fishman

I. Rationale for Conducting Small Molecule Screens With Zebrafish	526
II. Selection of Small Molecule Libraries	526
III. Assay Design: Major Screen Types	529
IV. Screening Methods	533
V. Mechanism of Action Studies	535
VI. Conclusions	538
References	538
Index	543
Volumes in Series	559
